Progress report on adoption of the Basel regulatory framework

Introduction

This report sets out the adoption status of Basel III standards for each Basel Committee on Banking Supervision (BCBS) member jurisdiction as of end-March 2016. It updates the Committee's previous progress reports which have been published on a semiannual basis since October 2011.¹

In 2012, the Committee started the Regulatory Consistency Assessment Programme (RCAP) to monitor progress in introducing domestic regulations, assessing their consistency and analysing regulatory outcomes.² As part of this programme, the Committee periodically monitors (since October 2011) the adoption status of the risk-based capital requirements and (since October 2013) of the requirements for systemically important banks (SIBs), the liquidity coverage ratio (LCR) and the leverage ratio.³ In October 2015, the Committee extended its monitoring of the adoption progress to all Basel III standards, which will become effective by 2019.

As of March 2016, all 27 member jurisdictions have final risk-based capital rules, LCR regulations and capital conservation buffers in force, 24 have issued final rules for the countercyclical capital buffers and 23 have issued final or draft rules for their domestic SIBs framework. With regard to the global SIBs framework, all members that are home jurisdictions to G-SIBs have the final framework in force. Members are now turning to the implementation of other Basel III standards, including the leverage ratio and the net stable funding ratio (NSFR).

Regarding the *consistency of regulatory implementation*, the Committee has published its assessment reports on 24 members – Australia, Brazil, Canada, China, nine members of the European Union, Hong Kong SAR, India, Japan, Saudi Arabia, Mexico, Russia, Singapore, South Africa, Switzerland, Turkey and the United States – regarding their implementation of Basel risk-based capital regulations, which are available on the Committee's website. This includes all members that are home jurisdictions of G-SIBs. The Committee has also published seven assessment reports – Hong Kong SAR, India, Mexico, Russia, Saudi Arabia, Turkey and South Africa – on the domestic adoption of the Basel LCR standards. The assessments of South Korea, Argentina and Indonesia are under way, including consistency of implementation of both risk-based capital and LCR standards. Further, the assessment of implementation of the G-SIBs requirements is ongoing and the assessment reports are expected to be published in mid-2016. By end-2016, the Committee aims to have assessed the consistency of risk-based capital standards of all 27 member jurisdictions and the consistency of G-SIBs standards of all five member jurisdictions that are home jurisdictions of G-SIBs.

¹ Previous progress reports are available at www.bis.org/bcbs/implementation/bpr11.htm. One of the responsibilities of member jurisdictions is to implement the BCBS standards within the timeframe established by the Committee and to undergo and participate in BCBS reviews to assess the consistency of domestic rules and supervisory practices in relation to BCBS standards (see the BCBS Charter of January 2013, www.bis.org/bcbs/charter.htm).

² See BCBS, *Basel III Regulatory Consistency Assessment Programme: Handbook for jurisdictional assessments*, March 2016, www.bis.org/bcbs/publ/d361.htm.

³ For jurisdictions that are not members of the Committee, the Financial Stability Institute (FSI) of the Bank for International Settlements published the results of its survey on Basel III's adoption status in July 2014. See FSI, *FSI Survey – Basel II, 2.5 and III implementation*, July 2014, www.bis.org/fsi/fsiop2014.htm.

Regarding the analysis of *consistency of regulatory outcomes*, the Committee has published in October 2015 its report on the regulatory consistency of risk-weighted assets for counterparty credit risk (the third of the Committee's publications on RWA variation in the trading book) and in April 2016 its second report on the regulatory consistency of risk-weighted assets for banking book.⁴ In addition, the Committee published in March 2016 for consultation a set of proposed changes to the internal ratings-based approach (IRB) aimed at reducing variation in credit risk-weighted assets.⁵

Status of adoption of Basel III standards

Scope

The Basel III framework builds on and enhances the regulatory framework set out under Basel II and Basel 2.5. The structure of the attached table has been revamped (effective from October 2015) to monitor the adoption progress of all Basel III standards, which will come into effect by 2019. The monitoring table no longer includes the reporting columns for Basel II and 2.5. The attached table therefore reviews members' regulatory adoption of the following standards:

- **Basel III Capital:** In December 2010, the Committee released Basel III, which set higher levels for capital requirements and introduced a new global liquidity framework. Committee members agreed to implement Basel III from 1 January 2013, subject to transitional and phase-in arrangements.⁶
 - Capital conservation buffer: The capital conservation buffer is phased in between 1 January 2016 and year-end 2018, becoming fully effective on 1 January 2019.
 - Countercyclical buffer: The countercyclical buffer is phased in parallel to the capital conservation buffer between 1 January 2016 and year-end 2018, becoming fully effective on 1 January 2019.
 - Capital requirements for equity investment in funds: In December 2013, the Committee issued the final standard for the treatment of banks' investments in the equity of funds that are held in the banking book, which will take effect from 1 January 2017.
 - Standardised approach for measuring counterparty credit risk exposures (SA-CCR): In March 2014, the Committee issued the final standard on SA-CCR, which will take effect from 1 January 2017. It will replace both the Current Exposure Method (CEM) and the Standardised Method (SM) in the capital adequacy framework, while the IMM (Internal Model Method) shortcut method will be eliminated from the framework.
 - Securitisation framework: The Committee issued revisions to the securitisation framework in December 2014 to strengthen the capital standards for securitisation exposures held in the banking book, which will come into effect in January 2018.

⁴ Reports are available at www.bis.org/bcbs/implementation/l3.htm.

⁵ Consultation document is available at www.bis.org/bcbs/publ/d362.pdf.

⁶ In September 2013, the Committee issued the final framework for margin requirements for non-centrally cleared derivatives. Subsequently, in March 2015, the Committee published a revised version. Relative to the 2013 framework, the revised version changes the beginning of the phase-in period for collecting and posting initial margin on non-centrally cleared trades from 1 December 2015 to 1 September 2016. The full phase-in schedule has been adjusted to reflect this nine-month change in implementation. The revisions also institute a six-month phase-in of the requirement to exchange variation margin, beginning 1 September 2016.

- Capital requirements for bank exposures to central counterparties: In April 2014, the Committee issued the final standard for the capital treatment of bank exposures to central counterparties, which will come into effect on 1 January 2017.
- *Basel III leverage ratio*: In January 2014, the Basel Committee issued the Basel III leverage ratio framework and disclosure requirements. Implementation of the leverage ratio requirements began with bank-level reporting to national supervisors until 1 January 2015, while public disclosure started on 1 January 2015. The Committee will carefully monitor the impact of these disclosure requirements. Any final adjustments to the definition and calibration of the leverage ratio will be made by 2017, with a view to migrating to a Pillar 1 (minimum capital requirements) treatment on 1 January 2018 based on appropriate review and calibration.
- *Basel III liquidity coverage ratio (LCR)*: In January 2013, the Basel Committee issued the revised LCR. It came into effect on 1 January 2015 and is subject to a transitional arrangement before reaching full implementation on 1 January 2019.⁷
- *Basel III net stable funding ratio (NSFR)*: In October 2014, the Basel Committee issued the final standard for the NSFR. In line with the timeline specified in the 2010 publication of the liquidity risk framework, the NSFR will become a minimum standard by 1 January 2018.⁸
- *G-SIB framework*: In July 2013, the Committee published an updated framework for the assessment methodology and higher loss absorbency requirements for G-SIBs. The requirements came into effect on 1 January 2016 and become fully effective on 1 January 2019. To enable their timely implementation, national jurisdictions agreed to implement by 1 January 2014 the official regulations/legislation that establish the reporting and disclosure requirements.
- *D-SIB framework*: In October 2012, the Committee issued a set of principles on the assessment methodology and the higher loss absorbency requirement for domestic systemically important banks (D-SIBs). Given that the D-SIB framework complements the G-SIB framework, the Committee believes it would be appropriate if banks identified as D-SIBs by their national authorities were required to comply with the principles in line with the phase-in arrangements for the G-SIB framework, ie from January 2016.
- *Pillar 3 disclosure requirements*: In January 2015, the Basel Committee issued the final standard for revised Pillar 3 disclosure requirements, which will take effect from end-2016 (ie banks will be required to publish their first Pillar 3 report under the revised framework concurrently with their year-end 2016 financial report). The standard supersedes the existing Pillar 3 disclosure requirements first issued as part of the Basel II framework in 2004 and the Basel 2.5 revisions and enhancements introduced in 2009.
- *Large exposures framework*: In April 2014, the Committee issued the final standard that sets out a supervisory framework for measuring and controlling large exposures, which will take effect from 1 January 2019.

Methodology

The information contained in the following table is based on responses from Basel Committee member jurisdictions, and reports the status as of end-March 2016.

⁷ In January 2014, the Committee issued final requirements for banks' LCR-related disclosures. Banks are required to comply with these requirements from the date of the first reporting period after 1 January 2015.

⁸ In June 2015, the Committee issued final requirements for banks' NSFR-related disclosures. Banks are required to comply with these requirements from the date of the first reporting period after 1 January 2018.

The following classification is used for the adoption status of Basel regulatory rules:

1. *Draft regulation not published*: no draft law, regulation or other official document has been made public to detail the planned content of the domestic regulatory rules. This status includes cases where a jurisdiction has communicated high-level information about its implementation plans but not detailed rules.
2. *Draft regulation published*: a draft law, regulation or other official document is already publicly available, for example for public consultation or legislative deliberations. The content of the document has to be specific enough to be implemented when adopted.
3. *Final rule published*: the domestic legal or regulatory framework has been finalised and approved but is still not implemented by banks.
4. *Final rule in force*: the domestic legal and regulatory framework has been published and is implemented by banks.

In order to support and supplement the status reported, summary information about the next steps and the adoption plans being considered are also provided for each jurisdiction.⁹

In addition to the status classification, a colour code is used to indicate the adoption status of each jurisdiction.¹⁰ The colour code is used for those Basel components for which the agreed adoption deadline has passed.

⁹ Links to domestic implementation documents are available at www.bis.org/publ/bcbs/b3prog_dom_impl.htm.

¹⁰ **Green** = adoption completed; **yellow** = adoption in process; **red** = no adoption.

Overview table

Number code: 1 = draft regulation not published; 2 = draft regulation published; 3 = final rule published (not yet implemented by banks); 4 = final rule in force (published and implemented by banks). **Green** = adoption completed; **yellow** = adoption in process; **red** = no adoption. N/A: Not applicable. Standards for which the agreed implementation deadline has passed receive a colour code to reflect the status of implementation.

	NSFR disclosure requirements	Jan 2018	1	The US agencies are actively developing a proposal to implement NSFR disclosure standards, which is anticipated to be issued for public comment in the next several quarters.
	Leverage ratio	Jan 2018	4	<p>Final Basel III rule approved in July 2013, effective 1 January 2014. The rule (i) included the generally applicable US Tier 1 leverage ratio minimum requirement of 4% of Tier 1 capital to total on-balance-sheet assets, and (ii) introduced the supplementary leverage ratio (SLR) (ie the Basel III leverage ratio) minimum requirement of 3% of Tier 1 capital to total leverage exposure for all US banking organisations subject to the advanced approaches rule (ie banking organisations with total consolidated assets equal to \$250 billion or more, or consolidated total on-balance-sheet foreign exposure equal to \$10 billion or more, and their subsidiaries), effective 1 January 2018. The SLR was revised in September 2014, consistent with the January 2014 Basel Committee revisions to the Basel III leverage ratio.</p> <p>In addition, in April 2014, the United States agencies adopted enhanced SLR standards for United States G-SIB bank holding companies and their insured depository subsidiaries. United States GSIB bank holding companies must maintain a leverage buffer greater than two percentage points above the minimum supplementary leverage ratio requirement of three percent, for a total of more than five percent, to avoid restrictions on capital distributions and discretionary bonus payments. Insured depository subsidiaries of US GSIBs must maintain at least a six percent supplementary leverage ratio to be considered "well capitalised" under the agencies' prompt corrective action framework. The enhanced SLR standards are effective 1 January 2018.</p>
	Leverage ratio disclosure requirements	Jan 2015	4	US top-tier holding companies subject to the advanced approaches rule started disclosing the SLR effective 1 January 2015, using the two common disclosure templates contained in the Basel III leverage ratio framework. 		G-SIB requirements	Jan 2016	4	Final G-SIB rule approved in July 2015, phase-in begins 1 January 2016, becoming fully effective 1 January 2019. The final rule requires US G-SIBs to calculate their surcharges under two methods and use the higher of the two surcharges. The first method is based on the Basel Committee framework and considers a G-SIB's size, interconnectedness, cross-jurisdictional activity, substitutability and complexity. The second method uses similar inputs but is calibrated to result in significantly higher surcharges and replaces substitutability with a measure of the firm's reliance on short-term wholesale funding.
		D-SIB requirements	Jan 2016	N/A	All US bank holding companies with total assets of \$50 billion or more are subject by regulation to enhanced prudential standards, including the risk-based capital, leverage, and liquidity requirements discussed above, as well as capital planning, stress testing, resolution planning and risk management requirements.

		D-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process) National legislation is in force, according to which Finansinspektionen has been given all required mandates. In October 2015, Finansinspektionen decided to strictly follow the EBA guideline for O-SII identification, implying that four Swedish banking groups were identified as O-SIIs. These banks are required to hold an O-SII capital buffer of 2% from 1 January 2016. Also, Finansinspektionen has been given the legal powers to set a systemic risk buffer. A systemic risk buffer of 3% CET1 has been applied to Sweden's four largest banks at group level from 1 January 2015. (Additionally, another 2% CET1 requirement has been set for these banking groups in Pillar 2.)
