WE ARE ABLE TO BUILD FLOW OF FUNDS
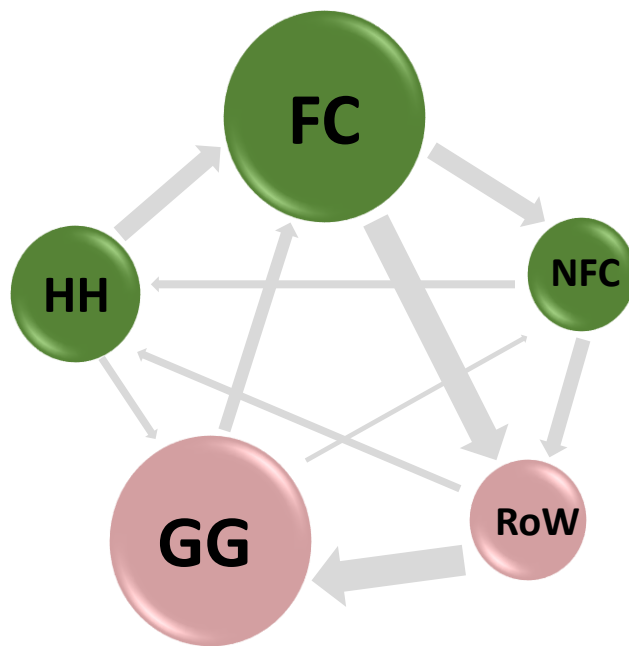

Show the interlinkages between institutional sectors :

- Diameter proportional to net lending/borrowing of each sector

- Green/red if positive/negative

- Represent net flow

- Width proportional to magnitude of inter-sectoral relation

DEMANDS FOR COMPLETE INFORMATION FOR ALL INSTITUTIONAL SECTORS, FINANCIAL INSTRUMENTS AND COUNTERPARTS.

7

THE BENEFITS OF COLLECTING MICRO DATA ARE BEING GLOBALLY RECOGNISED.

The information required to compile integrated sectoral accounts and flow of funds schemes can be easier derived from granular administrative datasets.

CENTRAL CREDIT REGISTER

Contains granular information on e.g. credit exposures

SECURITIES STATISTICS INTEGRATED SYSTEM

A security-by-security and investor-by-investor database of both securities holdings and issues.

CENTRAL BALANCE-SHEET DATABASE

An economic and financial database based on annual and quarterly accounting data on individual Portuguese Non-financial corporations.
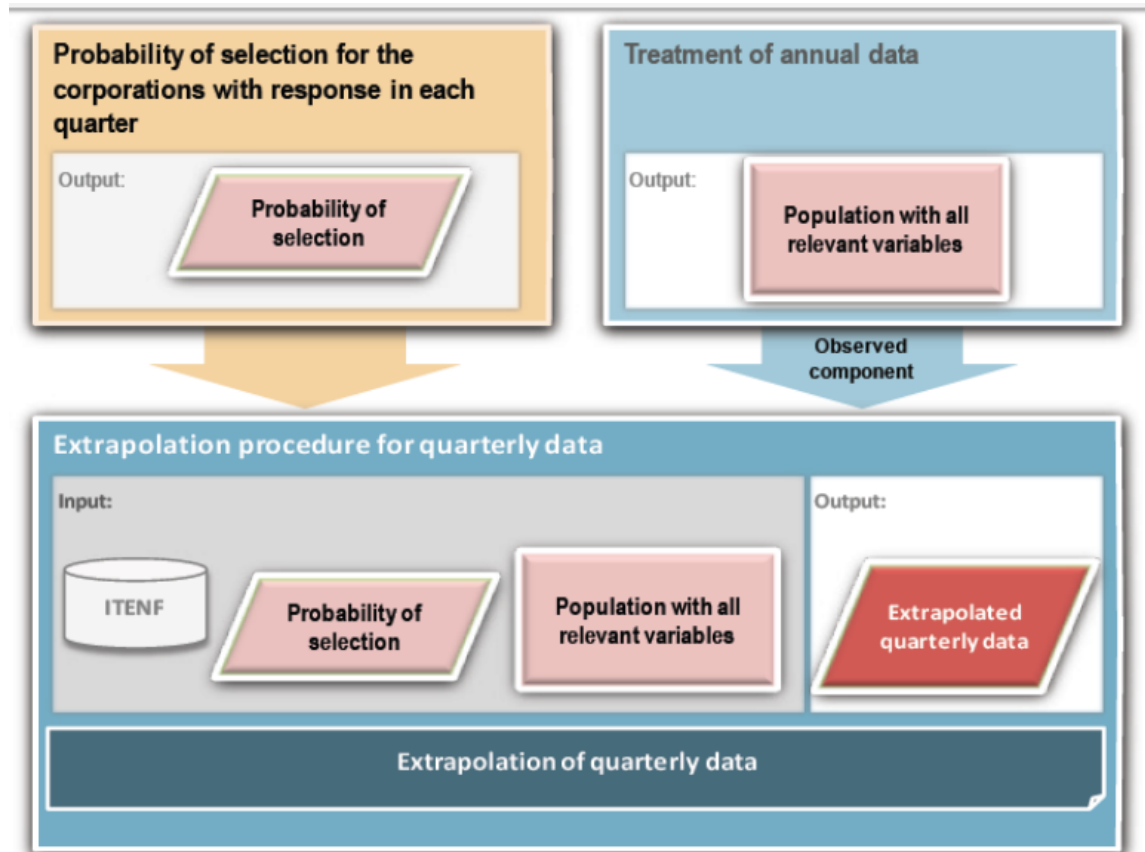

CENTRAL BALANCE - SHEET DATABASE: sources of information

Quarterly data

ITENF

COMPANIES
accounting
data on individual basis

Annual data

literally meaning
"simplifies corporate information"

EXTRAPOLATION PROCEDURE FOR QUARTELY DATA

Extrapolated data are used as data for total NFC, which is undoubtedly a great plus to the production of NFC statistics and also to the elaboration of different and flexible statistical products – inter alia, quarterly national financial accounts.

BANCO DE PORTUGAL
EUROSYSTEM

CONCILIATION BETWEEN ANNUAL AND QUARTERLY DATA - *BENCHMARKING*

This conciliation method makes possible to adjust the quarterly time-series obtained by extrapolating ITENF to the annual time-series obtained from IES, which are considered as benchmarks.

In order to carry out this adjustment, a set of constraints to be fulfilled by final data are defined:

AGGREGATION CONSTRAINTS

CONTEMPORANEOUS CONSTRAINTS OF ACCOUNTING BALANCE

Ensure that the quarterly time-series is consistent with the annual time-series.

Ensures that an accounting balance condition between the balance sheet and the profit and loss account is met in each period.

The final result for each aggregate consists in a range of quarterly time series based on a balance sheet and a profit and loss account without imbalances, which combine the annual value obtained in IES with the intra-annual dynamics resulting from the extrapolated ITENF.

NATIONAL FINANCIAL ACCOUNTS COMPILATION USING CBSD DATA

NON-FINANCIAL CORPORATIONS

OWN DATA SOURCES

IES: annual data, quarterly figures estimated based primarily on the ITENF

SSIS: Securities Statistics Information System

COUNTERPART INFORMATION

Financial sector, General Government and Rest of the World

All information identified by these 3 sectors as having its counterpart in the NFC sector is **taken directly** for the compilation of the NFCs account

NATIONAL FINANCIAL ACCOUNTS COMPILATION USING CBSD DATA

NON FINANCIAL CORPORATIONS + HOUSEHOLDS

CBSD - IES

- **Unquoted shares and other equity**

- **Loans** between NFCs and with HHs

- **Trade credits**

- **Insurance technical reserves**

- **Other accounts receivable/payable**

Counterpart sector data, relevant for HHs account compilation

SSIS

- **Quoted shares**

- **Securities other than shares**

FINAL REMARKS

- The achievement of Portuguese **fully integrated and consistent financial accounts**, was only made possible due to **the richness of the statistical content of the CBSD** run by the Banco de Portugal.

- This huge potentiality is due to:
    - the relevant data on the population of corporations in Portugal for a relatively long period, as a result of the excellent coverage of IES;
    - the appropriate methodology for the selection of corporations within the scope of the ITENF and the respective extrapolation procedure.

- Alone or combined with other information, **CBSD data also proved to be a great value for pursuing the statistical central bank statutory obligations**. The use of this information for the compilation of the NFC and HH sectors' financial accounts is an example of the statistical possibilities of such census information.

Thank you for your attention!
