Table 16	OTC single currency interest rate derivatives .....	22
Table 17	OTC equity-linked derivatives .....	23

*Conventions used in the tables*

0 = Value close to zero.

... = Reported to be nil, not reported, not shown for reasons of confidentiality, not meaningful or not applicable.

Owing to rounding and incomplete reporting of various breakdowns, the component items do not always sum to the total for the category in question.

"Gross" refers to data for which no adjustment has been made for estimated double-counting; "net-gross" refers to data for which adjustments have been made for estimated local double-counting; and "net-net", or "net", refers to data adjusted for both local and cross-border double-counting.

<sup>1</sup> All figures are adjusted for double-counting of trades between dealers. Notional amounts outstanding have been adjusted by halving positions vis-à-vis other reporting dealers. Gross market values have been calculated as the sum of the total gross positive market value of contracts and the absolute value of the gross negative market value of contracts with non-reporting counterparties. <sup>2</sup> Single currency contracts only. <sup>3</sup> Adjustments for double-counting partly estimated. <sup>4</sup> Gross market values after taking into account legally enforceable bilateral netting agreements. <sup>5</sup> Open interest of foreign exchange and interest rate futures and options traded worldwide. Sources: Euromoney TRADEDATA, Futures Industry Association; The Options Clearing Corporation; BIS derivatives statistics.

<sup>1</sup> Data adjusted for inter-dealer double-counting. While data on total options are shown on a net basis, separate data on options sold and options bought are recorded on a gross basis, ie not adjusted for inter-dealer double-counting. Due to incomplete counterparty breakdown, components do not always add to totals. <sup>2</sup> Calculated as the difference between the total and the sum of the listed components.
