

Macroeconomic Developments and Structural Issues in CEE Countries

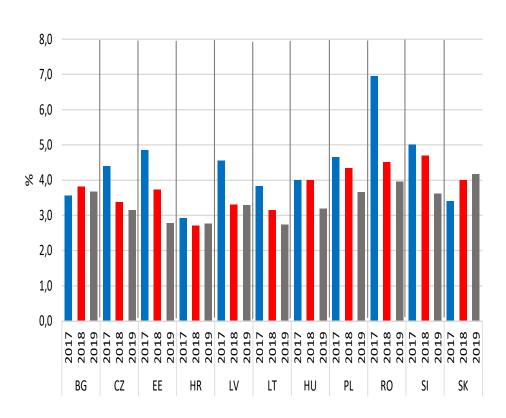

Roundtable on Macroeconomic Developments in CEE Countries

Budapest - November 2018

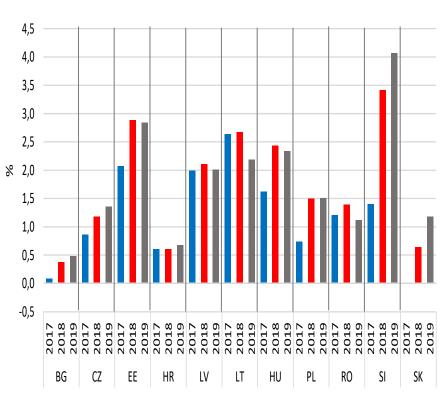

Boris Vujčić, Governor

Growth continues but expansion might moderate

Output gap

However, inflation remains relatively low

Sources: Ameco; CNB for Croatia

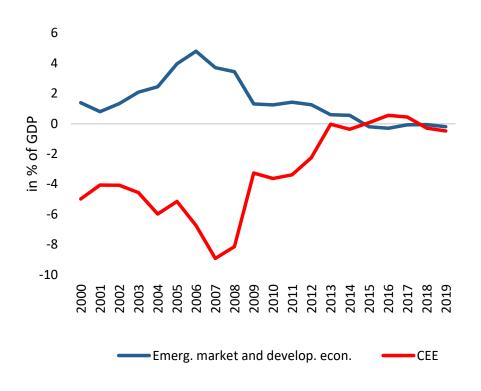

Mounting risks to the outlook

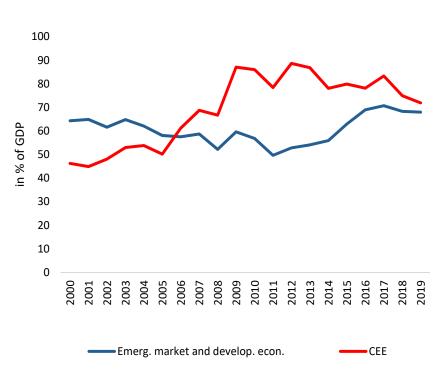

- Escalation of trade protectionism
- Monetary normalization
- □ Other negative spill-overs (Italy)

Yet, CEE seem to be in a good shape to withstand impact of negative schocks

However, medium-term growth not sufficient to ensure pre-crisis pace of convergence

Real convergence, PPS, Germany=100

EU periphery – Italy, Spain, Portugal, Greece Source: AMECO

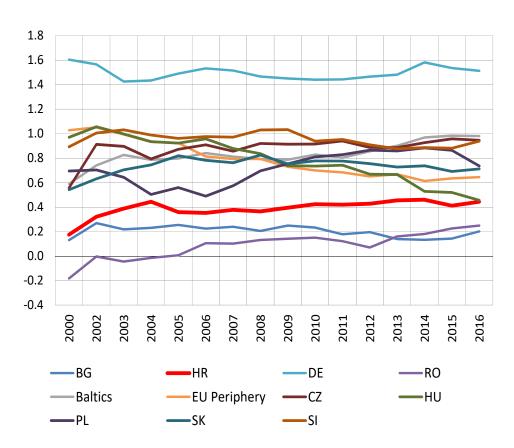

Total factor productivity – the truth is out there

Macroeconomic impact of structural reforms

(Stand-alone reforms, difference from baseline)

... how to get them right?

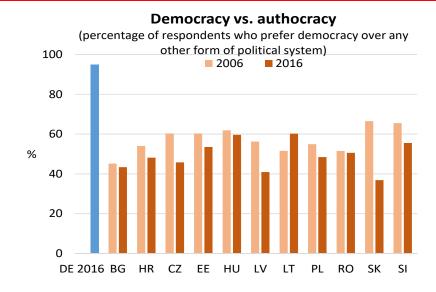

- Two dimensions of structural reforms:
 - Moving closer to the efficiency frontier reallocation of resources, more efficient usage of inputs.
 - Potential growth rate expanding the efficiency frontier.
- But many policies:
 - product market reforms, competition policy, labour market reforms, public finance and taxation (including social security system), human capital development, innovation policy, ...
- □ Do economist really understand all the mechanisms at play:
 - synergies and complementarities of reforms;
 - diminishing marginal effects of reforms?

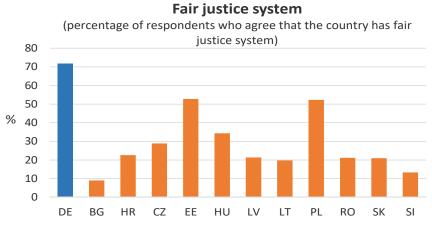

No guarantees, but reforms remain the safest bet

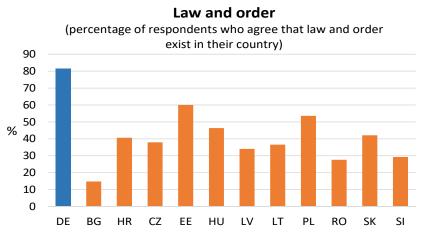

- □ No guarantees that convergence will gain momentum again
- □ Closest thing to a recipe for reducing probability of being caught in middle income trap:
 - High quality of human capital education reform
 - Facilitate private sector investment in physical capital and know-how
 - Adequate access to finance for SMEs
 - Friendly business environment
- □ Keep in mind that political economy also matters

Limited "political inclusiveness" might hinder support for the reforms

Conclusion

- □ CEE achieved considerable improvement in macro and financial position due to a combination of sounder domestic policies but also due to more favourable external conditions as the euro area economy recovered
- However, given mounting risk to the outlook no space for complacency
- □ Aim is to improve the potential growth
- Not everything we do will always get full support from the broad public, and especially in the case of structural reforms with long-term gains and short-term costs

Thank you!
