# Progress report on adoption of the Basel regulatory framework

## Introduction

This report sets out the adoption status of Basel III standards for each Basel Committee on Banking Supervision (BCBS) member jurisdiction as of end-March 2017. It updates the Committee's previous progress reports which have been published on a semiannual basis since October 2011.<sup>1</sup>

In 2012, the Committee started the Regulatory Consistency Assessment Programme (RCAP) to monitor progress in introducing domestic regulations, assessing their consistency and analysing regulatory outcomes.<sup>2</sup> As part of this programme, the Committee periodically monitors the adoption of Basel standards. The monitoring initially focused on the Basel III risk-based capital requirements and has since expanded to cover all Basel III standards. These standards will become effective by 2019.

As of end-March 2017, all 27 member jurisdictions have final risk-based capital rules, LCR regulations and capital conservation buffers in force. 26 member jurisdictions have issued final rules for the countercyclical capital buffers, 25 have issued final or draft rules for domestic systemically important banks (D-SIBs) frameworks, 20 have issued final or draft rules for margin requirements for non-centrally cleared derivatives and also 20 have issued final or draft rules for monitoring tools for intraday liquidity management. With regard to the global systemically important banks (G-SIBs) framework, all members that are home jurisdictions to G-SIBs have final rules in force.

The deadlines for adopting requirements for equity investments in funds, the standardised approach for measuring counterparty credit risk (SA-CCR), bank exposures to central counterparties (CCP) and Pillar 3 disclosure have now passed. While some members have reported challenges in implementing these standards, 21 member jurisdictions have now issued final or draft rules of the revised Pillar 3 framework, 19 have issued final or draft rules of the SA-CCR and capital requirements for equity investments in funds and 17 have issued final or draft rules of capital requirements for CCP exposures. Members are now turning to the implementation of other Basel III standards, including those on TLAC holdings, the market risk framework, the leverage ratio and the net stable funding ratio (NSFR).

Regarding the *consistency of regulatory implementation*, the Committee has published its assessment reports on all 27 members regarding their implementation of Basel risk-based capital regulations. Further, assessments of implementation of the Basel G-SIB framework were published in June 2016, covering the five jurisdictions that are currently home to G-SIBs. The Committee has also published 12 assessment reports – Argentina, Hong Kong SAR, India, Indonesia, Japan, Korea, Mexico, Russia, Saudi Arabia, Singapore, South Africa and Turkey – on the domestic adoption of the Basel LCR standards. An assessment of the implementation of the LCR standards in the remaining member jurisdictions is

<sup>1</sup> Previous progress reports are available at [www.bis.org/bcbs/implementation/bpr11.htm](http://www.bis.org/bcbs/implementation/bpr11.htm). One of the responsibilities of member jurisdictions is to implement the BCBS standards within the timeframe established by the Committee and to undergo and participate in BCBS reviews to assess the consistency of domestic rules and supervisory practices in relation to BCBS standards (see the BCBS Charter of January 2013, [www.bis.org/bcbs/charter.htm](http://www.bis.org/bcbs/charter.htm)). The Financial Stability Institute (FSI) of the Bank of International Settlements publishes information on the adoption of Basel III by non-Basel Committee members, most recently in July 2015 (see [www.bis.org/fsi/fsiop2015.pdf](http://www.bis.org/fsi/fsiop2015.pdf)).

underway. The Committee aims to have assessed the consistency of LCR standards in all 27 member jurisdictions by end-2017.<sup>3</sup>

Regarding the analysis of *consistency of regulatory outcomes*, the Committee has published five reports on the regulatory consistency of risk-weighted assets in the banking book and in the trading book.<sup>4</sup>

## Status of adoption of Basel III standards

### Scope

The Basel III framework builds on and enhances the regulatory framework set out under Basel II and Basel 2.5. The attached table is designed to monitor the adoption progress of all Basel III standards, which will come into effect by 2019. The monitoring table no longer includes the reporting columns for Basel II and 2.5, nor those Basel III standards that have been implemented by all BCBS members (*definition of capital, capital conservation buffer and liquidity coverage ratio*). The attached table therefore reviews members' regulatory adoption of the following standards.

- The following aspects of the *risk-based capital* standards are still being implemented:
  - Countercyclical buffer: The countercyclical buffer is phased in parallel to the capital conservation buffer between 1 January 2016 and year-end 2018, becoming fully effective on 1 January 2019.
  - TLAC holdings: The TLAC holdings standard was issued by the Committee in October 2016. It applies to all banks and describes the prudential treatment for holdings of instruments that comprise TLAC for the issuing G-SIB. The standard will take effect from 1 January 2019.
  - Minimum capital requirements for market risk: In January, the Committee issued the revised minimum capital requirements for market risk, which will come into effect on 1 January 2019.
  - Capital requirements for equity investment in funds: In December 2013, the Committee issued the final standard for the treatment of banks' investments in the equity of funds that are held in the banking book, which took effect from 1 January 2017.
  - SA-CCR: In March 2014, the Committee issued the final standard on SA-CCR, which took effect on 1 January 2017. It replaced both the Current Exposure Method (CEM) and the Standardised Method (SM) in the capital adequacy framework, while the IMM (Internal Model Method) shortcut method is eliminated from the framework.
  - Securitisation framework: The Committee issued revisions to the securitisation framework in December 2014 and July 2016 to strengthen the capital standards for securitisation exposures held in the banking book, which will come into effect in January 2018.
  - Margin requirements for non-centrally cleared derivatives: In September 2013, the Committee issued the final framework for margin requirements for non-centrally cleared derivatives. Subsequently, in March 2015, the Committee published a revised version. Relative to the 2013 framework, the revised version changes the beginning of the phase-

in period for collecting and posting initial margin on non-centrally cleared trades from 1 December 2015 to 1 September 2016. The full phase-in schedule has been adjusted to reflect this nine-month change in implementation. The revisions also institute a six-month phase-in of the requirement to exchange variation margin, beginning 1 September 2016.

- Capital requirements for bank exposures to central counterparties: In April 2014, the Committee issued the final standard for the capital treatment of bank exposures to central counterparties. These came into effect on 1 January 2017.
- *Basel III leverage ratio*: In January 2014, the Basel Committee issued the Basel III leverage ratio framework and disclosure requirements. Implementation of the leverage ratio requirements began with bank-level reporting to national supervisors until 1 January 2015, while public disclosure started on 1 January 2015. The Committee will carefully monitor the impact of these disclosure requirements. Any final adjustments to the definition and calibration of the leverage ratio will be made by 2017, with a view to migrating to a Pillar 1 (minimum capital requirements) treatment on 1 January 2018 based on appropriate review and calibration.
- *Monitoring tools for intraday liquidity management*: This standard was developed in consultation with the Committee on Payment and Settlement Systems to enable banking supervisors to better monitor a bank's management of intraday liquidity risk and its ability to meet payment and settlement obligations on a timely basis. The reporting of the monitoring tools commenced on a monthly basis from 1 January 2015 to coincide with the implementation of the LCR reporting requirements.
- *Basel III net stable funding ratio (NSFR)*: In October 2014, the Basel Committee issued the final standard for the NSFR. In line with the timeline specified in the 2010 publication of the liquidity risk framework, the NSFR will become a minimum standard by 1 January 2018.<sup>5</sup>
- *G-SIB framework*: In July 2013, the Committee published an updated framework for the assessment methodology and higher loss absorbency requirements for G-SIBs. The requirements came into effect on 1 January 2016 and become fully effective on 1 January 2019. National jurisdictions agreed to implement the official regulations/legislation that establish the reporting and disclosure requirements by 1 January 2014.
- *D-SIB framework*: In October 2012, the Committee issued a set of principles on the assessment methodology and the higher loss absorbency requirement for domestic systemically important banks (D-SIBs). Given that the D-SIB framework complements the G-SIB framework, the Committee believes it would be appropriate if banks identified as D-SIBs by their national authorities were required to comply with the principles in line with the phase-in arrangements for the G-SIB framework, ie from January 2016.
- *Pillar 3 disclosure requirements*: In January 2015, the Basel Committee issued the final standard for revised Pillar 3 disclosure requirements, which took effect from end-2016 (ie. banks are required to publish their first Pillar 3 report under the revised framework concurrently with their year-end 2016 financial report). The standard supersedes the existing Pillar 3 disclosure requirements first issued as part of the Basel II framework in 2004 and the Basel 2.5 revisions and enhancements introduced in 2009.
- *Large exposures framework*: In April 2014, the Committee issued the final standard that sets out a supervisory framework for measuring and controlling large exposures, which will take effect from 1 January 2019.

<sup>5</sup> In June 2015, the Committee issued final requirements for banks' NSFR-related disclosures. Banks are required to comply with these requirements from the date of the first reporting period after 1 January 2018.

- *Interest rate risk in the banking book*: In April 2016, the Committee issued the final standard for Interest Rate Risk in the Banking Book (IRRBB), which is expected to be implemented by 2018.

## Methodology

The information contained in the following table is based on responses from Basel Committee member jurisdictions, and reports the status as of end-March 2017.

The following classification is used for the adoption status of Basel regulatory rules:

1. *Draft regulation not published*: no draft law, regulation or other official document has been made public to detail the planned content of the domestic regulatory rules. This status includes cases where a jurisdiction has communicated high-level information about its implementation plans but not detailed rules.
2. *Draft regulation published*: a draft law, regulation or other official document is already publicly available, for example for public consultation or legislative deliberations. The content of the document has to be specific enough to be implemented when adopted.
3. *Final rule published*: the domestic legal or regulatory framework has been finalised and approved but is still not implemented by banks.
4. *Final rule in force*: the domestic legal and regulatory framework has been published and is implemented by banks.

In order to support and supplement the status reported, summary information about the next steps and the adoption plans being considered are also provided for each jurisdiction.<sup>6</sup>

In addition to the status classification, a colour code is used to indicate the adoption status of each jurisdiction.<sup>7</sup> The colour code is used for those Basel components for which the agreed adoption deadline has passed.

<sup>6</sup> Links to domestic implementation documents are available at [www.bis.org/publ/bcbs/b3prog\\_dom\\_impl.htm](http://www.bis.org/publ/bcbs/b3prog_dom_impl.htm).

<sup>7</sup> **Green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published). N/A: Not applicable.

## Overview table

Number code: 1 = draft regulation not published; 2 = draft regulation published; 3 = final rule published (not yet implemented by banks); 4 = final rule in force (published and implemented by banks). Standards for which the agreed implementation deadline has passed receive a colour code to reflect the status of implementation: **Green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published). N/A: Not applicable.

Leverage ratio	Leverage ratio	Jan 2018	4	<p>Final Basel III rule approved in July 2013, effective 1 January 2014. The rule (i) included the generally applicable US Tier 1 leverage ratio minimum requirement of 4% of Tier 1 capital to total on-balance-sheet assets, and (ii) introduced the supplementary leverage ratio (SLR) (ie the Basel III leverage ratio) minimum requirement of 3% of Tier 1 capital to total leverage exposure for all US banking organisations subject to the advanced approaches rule (ie banking organisations with total consolidated assets equal to \$250 billion or more, or consolidated total on-balance-sheet foreign exposure equal to \$10 billion or more, and their subsidiaries), effective 1 January 2018. The SLR was revised in September 2014, consistent with the January 2014 Basel Committee revisions to the Basel III leverage ratio.</p> <p>In addition, in April 2014, the United States agencies adopted enhanced SLR standards for United States G-SIB bank holding companies and their insured depository subsidiaries. United States GSIB bank holding companies must maintain a leverage buffer greater than two percentage points above the minimum supplementary leverage ratio requirement of three percent, for a total of more than five percent, to avoid restrictions on capital distributions and discretionary bonus payments. Insured depository subsidiaries of US GSIBs must maintain at least a six percent supplementary leverage ratio to be considered "well capitalised" under the agencies' prompt corrective action framework. The enhanced SLR standards are effective 1 January 2018.</p>
	Leverage ratio disclosure requirements	Jan 2015	4	US top-tier holding companies subject to the advanced approaches rule started disclosing the SLR effective 1 January 2015, using the two common disclosure templates contained in the Basel III leverage ratio framework. Incorporation of the SLR disclosure into quarterly regulatory reporting is forthcoming.
SIB	G-SIB requirements	Jan 2016	4	Final G-SIB rule approved in July 2015, phase-in begins 1 January 2016, becoming fully effective 1 January 2019. The final rule requires US G-SIBs to calculate their surcharges under two methods and use the higher of the two surcharges. The first method is based on the Basel Committee framework and considers a G-SIB's size,

					interconnectedness, cross-jurisdictional activity, substitutability and complexity. The second method uses similar inputs but is calibrated to result in significantly higher surcharges and replaces substitutability with a measure of the firm's reliance on short-term wholesale funding.
		D-SIB requirements	Jan 2016	N/A	All US bank holding companies with total assets of \$50 billion or more are subject by regulation to enhanced prudential standards, including the risk-based capital, leverage, and liquidity requirements discussed above, as well as capital planning, stress testing, resolution planning and risk management requirements.
		Pillar 3 disclosure requirements	Dec 2016	1	
		Large exposures framework	Jan 2019	2	The Federal Reserve Board issued a proposal in March 2016 to apply single-counterparty credit limits to bank holding companies with total assets of USD50 billion or more.
		Interest rate risk in the banking book	2018	2	Many of the principles outlined in the standards are implemented in the United States through the "Joint Agency Policy Statement: Interest Rate Risk," as well as the "Interagency Advisory on Interest Rate Risk." The agencies are discussing approaches to address the remaining principles, including aspects of principles 4, 8, and 12.
European Union	Risk-based capital	Countercyclical buffer	Jan 2016	4	The CRD requires national authorities to issue regulations implementing a countercyclical buffer, with the requirement becoming applicable on 1 January 2016. EU jurisdictions are given the option to introduce the requirement before that date. For the national implementation status of these capital buffers, see the respective EU jurisdictions below.

	SIB	G-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process) Finansinspektionen has been given the legal mandate to identify G-SIIs and apply a so-called G-SII capital buffer. In June 2015, Finansinspektionen decided that the Nordea Group is a G-SII. A G-SII capital buffer of 1% is to be phased in starting from 1 January 2016.
D-SIB requirements		Jan 2016	(EU: 4)	(Follows EU process) National legislation is in force, according to which Finansinspektionen has been given all required mandates. In October 2015, Finansinspektionen decided to strictly follow the EBA guideline for O-SII identification, implying that four Swedish banking	

					groups were identified as O-SIIs. These banks are required to hold an O-SII capital buffer of 2% from 1 January 2016. Also, Finansinspektionen has been given the legal powers to set a systemic risk buffer. A systemic risk buffer of 3% CET1 has been applied to Sweden's four largest banks at group level from 1 January 2015. (Additionally, another 2% CET1 requirement has been set for these banking groups in Pillar 2.)
	Pillar 3 disclosure requirements		Dec 2016	(EU: 3, 2)	Regarding the Pillar 3 disclosure requirements, the EBA is currently drafting Guidelines to implement the revised Pillar 3 framework (Phase 1) released by the Basel Committee in January 2015.

				The UK domestic leverage ratio framework (including disclosure requirements) came into force on 1 January 2016, capturing major UK banks and building societies (see PRA PS 27/15).
SIB	G-SIB requirements	Jan 2016	(EU: 4)	(Follows EU and National process) G-SIB framework implemented through EBA technical standards, with G-SIB disclosure requirements and capital surcharges already in force. Where applicable to a firm, G-SIB/G-SII buffers are set by the PRA using its powers under section 55M of FSMA to increase the size of the firm's combined buffer (see PRA SS6/14).
	D-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process) The PRA's approach to identifying O-SIIs was published in February 2016 and is in accordance with Article 131 of Directive 2013/36/EU. The 2015 and 2016 list of UK O-SIIs are published on the PRA website.  The Financial Policy Committee's (FPC) framework for the systemic risk buffer was published in May 2016. As part of the framework, the PRA published a Statement of Policy outlining its approach to the implementation of the systemic risk buffer in December 2016. The framework and Statement of Policy will apply to ring-fenced banks and large building societies as defined in The Capital Requirement (Capital Buffers and Macro-prudential Measures) (Amendment) Regulation 2015 as of 1 January 2019.
