# Progress report on adoption of the Basel regulatory framework

## Introduction

This report sets out the adoption status of Basel III standards for each Basel Committee on Banking Supervision (BCBS) member jurisdiction as of end-September 2018.<sup>1</sup> It updates the Committee's previous progress reports, which have been published on a semiannual basis since October 2011.<sup>2</sup>

In 2012, the Committee started the Regulatory Consistency Assessment Programme (RCAP) to monitor progress in introducing domestic regulations, assessing their consistency and analysing regulatory outcomes.<sup>3</sup> As part of this programme, the Committee periodically monitors the adoption of Basel standards. The monitoring initially focused on the Basel risk-based capital requirements, and has since expanded to cover all Basel standards. These include the finalised Basel III post-crisis reforms published by the Committee in December 2017, which will take effect from 1 January 2022 and will be phased in over five years. When those reforms were published, the Group of Central Bank Governors and Heads of Supervision, the oversight body of the BCBS, reaffirmed its expectation of full, timely and consistent implementation of all elements of the package.<sup>4</sup>

As of end-September 2018, all 27 member jurisdictions have risk-based capital rules, Liquidity Coverage Ratio (LCR) regulations and capital conservation buffers in force. Twenty-six member jurisdictions also have final rules in force for the countercyclical capital buffer and the domestic systemically important bank (D-SIB) requirement. With regard to the global systemically important bank (G-SIB) requirements published in 2013, all members that are home jurisdictions to G-SIBs have final rules in force.

Since the last report published in April 2018, member jurisdictions have made further progress in implementing standards whose deadline has already passed. These include the leverage ratio based on the existing (2014) exposure definition, which is now partly or fully implemented in 26 member jurisdictions. Moreover, 25 member jurisdictions have issued draft or final rules for the Net Stable Funding Ratio (NSFR), and 20 member jurisdictions have issued draft or final rules for the revised securitisation framework. In case of implementation of the standardised approach for measuring counterparty credit risk exposures (SA-CCR), 24 member jurisdictions have issued draft or final rules. Also, draft or final rules for the capital requirements for bank exposures to central counterparties (CCPs) have been issued by 23 member jurisdictions. However, in many jurisdictions, rules for these standards are yet to be finalised and come into force. This is notably the case for the NSFR, with only 10 member jurisdictions having final rules in force as of end-September 2018.

There has been also progress in implementation of standards whose deadline is within the next six months. On requirements for total loss-absorbing capacity (TLAC), 15 member jurisdictions have issued draft or final rules. Similarly, 21 member jurisdictions have issued draft or final rules for the large exposure (LEX) framework and for interest rate risk in the banking book (IRRBB).

<sup>1</sup> Draft or final rules published and reported by member jurisdictions between end-September 2018 and the publication of this report may be taken into account.

<sup>2</sup> Previous progress reports are available on the Committee's website at [www.bis.org/bcbs/implementation/rcap\\_reports.htm](http://www.bis.org/bcbs/implementation/rcap_reports.htm). One of the responsibilities of member jurisdictions is to implement Basel standards within the time frame established by the Committee and to undergo and participate in assessments of the consistency of domestic rules and supervisory practices in relation to Basel standards (see the Basel Committee Charter of January 2013, [www.bis.org/bcbs/charter.htm](http://www.bis.org/bcbs/charter.htm)).

<sup>3</sup> The description of the RCAP is available on the Committee's website at [www.bis.org/bcbs/implementation.htm](http://www.bis.org/bcbs/implementation.htm).

<sup>4</sup> See [www.bis.org/press/p171207.htm](http://www.bis.org/press/p171207.htm).

However, limited progress has been observed in the implementation of capital requirements for equity investments in funds.

While the Committee welcomes the progress made on the implementation of various standards by member jurisdictions, it urges them to strive for full, timely and consistent implementation of Basel III post-crisis reforms and will continue monitoring closely the implementation of these reforms.

Regarding the *consistency of regulatory implementation*, the Committee has published its assessment reports on all 27 members regarding their implementation of Basel risk-based capital and LCR standards. Further, assessments of implementation of the Basel G-SIB framework were published in June 2016, covering the five jurisdictions that are currently home to G-SIBs.

In 2018, the Committee has started assessing the consistency of implementation of the NSFR and the LEX framework.<sup>5</sup> The first such assessment was of the Kingdom of Saudi Arabia. Overall, the NSFR regulations and the LEX framework in Saudi Arabia were found to be “compliant” with the Basel standards.<sup>6</sup> The Committee plans to complete its review of the implementation of the NSFR and the LEX framework for all member jurisdictions by September 2020.<sup>7</sup>

Regarding the analysis of *consistency of regulatory outcomes*, the Committee has published five reports on the regulatory consistency of risk-weighted assets in the banking book and in the trading book.<sup>8</sup>

## Status of adoption of Basel standards

### Scope

This report is designed to monitor the adoption progress of all Basel standards agreed to date. The monitoring tables include all standards currently in the course of implementation in BCBS member jurisdictions. This means that, in contrast to earlier reports, it no longer includes the Basel II and 2.5 standards, nor those Basel III standards that have been implemented by all BCBS members (definition of capital, capital conservation buffer and LCR). The attached table therefore reviews members’ regulatory adoption of the following standards.

- The following aspects of the *risk-based capital* standards are still being implemented:
  - Countercyclical buffer: The countercyclical buffer is to be phased in parallel to the capital conservation buffer between 1 January 2016 and year-end 2018, becoming fully effective on 1 January 2019.
  - Margin requirements for non-centrally cleared derivatives: These requirements, most recently updated in March 2015, are being phased in between 1 September 2016 and 31 August 2020.
  - Capital requirements for bank exposures to central counterparties: In April 2014, the Committee issued the final standard for the capital treatment of bank exposures to CCPs. These came into effect on 1 January 2017.

<sup>5</sup> All jurisdictional reports are available at [www.bis.org/bcbs/implementation/rcap\\_jurisdictional.htm](http://www.bis.org/bcbs/implementation/rcap_jurisdictional.htm).

<sup>6</sup> The report of the assessment is available at [www.bis.org/press/p180927.htm](http://www.bis.org/press/p180927.htm)

<sup>7</sup> The timetable for these assessments is available at [www.bis.org/bcbs/implementation/rcap\\_aoi.htm](http://www.bis.org/bcbs/implementation/rcap_aoi.htm).

<sup>8</sup> Reports are available at [www.bis.org/bcbs/implementation/rcap\\_thematic.htm](http://www.bis.org/bcbs/implementation/rcap_thematic.htm).

- Capital requirements for equity investment in funds: In December 2013, the Committee issued the final standard for the treatment of banks' investments in the equity of funds that are held in the banking book, which took effect from 1 January 2017.
- The standardised approach for measuring counterparty credit risk exposure: In March 2014, the Committee issued the final standard on SA-CCR, which took effect on 1 January 2017. It replaced both the Current Exposure Method (CEM) and the Standardised Method (SM) in the capital adequacy framework, while the IMM (Internal Model Method) shortcut method is eliminated from the framework.
- Securitisation framework: The Committee issued revisions to the securitisation framework in December 2014 and July 2016 to strengthen the capital standards for securitisation exposures held in the banking book, which came into effect on 1 January 2018.
- TLAC holdings: The TLAC holdings standard was issued by the Committee in October 2016. It applies to all banks and describes the prudential treatment for holdings of instruments that comprise TLAC for the issuing G-SIB. The standard will take effect from 1 January 2019.
- Finalised reforms to the risk-based capital framework: In December 2017, the Committee issued the finalised Basel III post-crisis reforms, which will take effect from January 2022 and include the following aspects of the risk-based capital framework:
  - Revised standardised approach for credit risk
  - Revised internal ratings-based (IRB) approach for credit risk
  - Revised credit valuation adjustment (CVA) framework
  - Revised minimum capital requirements for market risk: the Committee extended the implementation date of the revised minimum capital requirements for market risk, which were originally set to be implemented in 2019, to 1 January 2022
  - Revised operational risk framework
  - Output floor: the Committee replaced the existing Basel II floor with a floor based on the revised Basel III standardised approaches. This revised output floor is to be phased in between 1 January 2022 and year-end 2026, becoming fully effective on 1 January 2027.
- The following aspects of the *Basel III leverage ratio* are still being implemented:
  - Leverage ratio based on the existing (2014) exposure definition: In January 2014, the Committee issued the Basel III leverage ratio framework and disclosure requirements. Implementation of the leverage ratio requirements came into effect on 1 January 2018, while public disclosure started on 1 January 2015.
  - Leverage ratio based on the revised (2017) exposure definition: In December 2017, the Committee issued the revised leverage ratio framework with revisions to its exposure measure, which will come into effect on 1 January 2022.
- The following aspects of the requirements for *liquidity* are still being implemented:
  - Monitoring tools for intraday liquidity management: This standard was developed in consultation with the Committee on Payment and Settlement Systems (now the Committee on Payments and Market Infrastructures) to enable banking supervisors to better monitor a bank's management of intraday liquidity risk and ability to meet payment and settlement obligations on a timely basis. The reporting of the monitoring

tools commenced on a monthly basis from 1 January 2015 to coincide with the implementation of the LCR reporting requirements.

- Basel III Net Stable Funding Ratio: In October 2014, the Basel Committee issued the final standard for the NSFR. In line with the timeline specified in the 2010 publication of the liquidity risk framework, the NSFR became a minimum standard on 1 January 2018.
- The following aspects of the requirements for *systemically important banks (SIBs)* are still being implemented:
  - G-SIB framework: In July 2013, the Committee published an updated framework for the assessment methodology and higher loss absorbency requirements for G-SIBs. The requirements came into effect on 1 January 2016 and will become fully effective on 1 January 2019. In July 2018, the Committee published a further updated framework, which is expected to be implemented by 2021.<sup>9</sup>
  - D-SIB framework: In October 2012, the Committee issued a set of principles on the assessment methodology and the higher loss absorbency requirement for D-SIBs. Given that the D-SIB framework complements the G-SIB framework, the Committee believes it would be appropriate if banks identified as D-SIBs by their national authorities were required to comply with the principles in line with the phase-in arrangements for the G-SIB framework, ie from January 2016.
  - Leverage ratio buffer: In December 2017, the Committee issued the revised leverage ratio framework by introducing a leverage ratio buffer for G-SIBs, which will come into effect on 1 January 2022.
- *Interest rate risk in the banking book*: In April 2016, the Committee issued the final standard for IRRBB, which is expected to be implemented by 2018.
- *Supervisory framework for measuring and controlling large exposures*: In April 2014, the Committee issued the final standard that sets out a supervisory framework for measuring and controlling large exposures, which will take effect from 1 January 2019.
- *Pillar 3 disclosure requirements*: In January 2015, the Basel Committee issued revised Pillar 3 disclosure requirements, which took effect from end-2016 (ie banks are required to publish their first Pillar 3 report under the revised framework concurrently with their year-end 2016 financial report). In March 2017, the Committee published standards developed during the second phase of its review of the Pillar 3 disclosure framework, building on the revisions published in 2015 and consolidating and enhancing other disclosures. These requirements take effect between 2017 and 2019 (except for market risk, for which the implementation and regulatory reporting date is on 1 January 2022).

## Methodology

The information contained in the following tables is based on responses from Basel Committee member jurisdictions, and reports the status as of end-March 2018.

The following classification is used for the adoption status of Basel regulatory rules:

1. *Draft regulation not published*: no draft law, regulation or other official document has been made public to detail the planned content of the domestic regulatory rules. This status includes cases where a jurisdiction has communicated high-level information about its implementation plans but not detailed rules.

<sup>9</sup> Future progress reports will consider monitoring the implementation status of these revisions.

2. *Draft regulation published*: a draft law, regulation or other official document is already publicly available, for example for public consultation or legislative deliberations. The content of the document has to be specific enough to be implemented when adopted.
3. *Final rule published*: the domestic legal or regulatory framework has been finalised and approved but is still not implemented by banks.
4. *Final rule in force*: the domestic legal and regulatory framework has been published and is implemented by banks.

In order to support and supplement the status reported, summary information about the next steps and the adoption plans being considered are also provided for each jurisdiction.<sup>10</sup>

In addition to the status classification, a colour code is used to indicate the adoption status of each jurisdiction: **green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published); and "na" = not applicable. The colour code is used for those Basel components for which the agreed adoption deadline has passed.

A standard is deemed as adopted and implemented only when the numerical code is 4 *and* the colour code is green.

<sup>10</sup> Links to domestic implementation documents are available at [www.bis.org/publ/bcbs/b3prog\\_dom\\_impl.htm](http://www.bis.org/publ/bcbs/b3prog_dom_impl.htm).

## Overview of implementation

Number code: 1 = draft regulation not published; 2 = draft regulation published; 3 = final rule published (not yet implemented by banks); 4 = final rule in force (published and implemented by banks); and \* = implementation status mixed (please refer to the progress monitoring report).

Standards for which the agreed implementation deadline has passed receive a colour code to reflect the status of implementation: **green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published); and "na" = not applicable.

## Implementation in Australia

Number code: 1 = draft regulation not published; 2 = draft regulation published; 3 = final rule published (not yet implemented by banks); 4 = final rule in force (published and implemented by banks). Standards for which the agreed implementation deadline has passed receive a colour code to reflect the status of implementation: **green** = adoption completed; **yellow** = adoption in process (draft regulation published); **red** = adoption not started (draft regulation not published); and "na" = not applicable.

	Basel standards	BCBS deadline	Status	Remarks
<b>Capital</b>	Countercyclical capital buffer (CCyB)	Jan 2016	4	Final rule published on 28 September 2012 and in force from 1 January 2016.
	Margin requirements for non-centrally cleared derivatives	Sep 2016	4	Final rule published on 17 October 2016. The requirements are phased in from 1 March 2017 and are fully effective on 1 September 2020.
	Capital requirements for CCPs	Jan 2017	3	Final rule published on 23 April 2018 and in force from 1 July 2019.
	Capital requirements for equity investments in funds	Jan 2017	1	To be considered as a part of APRA's review of its capital framework beginning in 2018. APRA's existing approach is considered super-equivalent.
	SA-CCR	Jan 2017	3	Final rule published
	Securitisation framework	Jan 2018	4	Implemented.
	TLAC holdings	Jan 2019	1	Draft rule expected to be published in 2019.
	Revised standardised approach for credit risk	Jan 2022	1	Draft rule expected to be published in 2018 or early 2019
	Revised IRB approach for credit risk	Jan 2022	1	Draft rule expected to be published in 2018 or early 2019
	Revised CVA framework	Jan 2022	1	APRA does not intend to finalise changes to the market risk capital requirements until 2020.
	Revised minimum requirements for market risk	Jan 2022	1	APRA does not intend to finalise changes to the market risk capital requirements until 2020.
	Revised operational risk framework	Jan 2022	1	Draft rule expected to be published in 2018 or early 2019.
Output floor	Jan 2022	1	Draft rule under development.	
<b>Leverage</b>	Existing (2014) exposure definition	Jan 2018	1	
	Revised (2017) exposure definition	Jan 2022	1	APRA intends to adopt a single implementation of the leverage ratio using the revised exposure measure.
<b>SIB</b>	G-SIB requirements	Jan 2016	4	No Australian bank is on the current list of G-SIBs, although the four Australian D-SIBs fall under the public G-SIB disclosure framework. Final rule for the G-SIB disclosures for the four Australian D-SIBs published on 8 May 2015 and in force from 1 July 2015.

	D-SIB requirements	Jan 2016	4	Final rule published on 23 December 2013 and in force from 1 January 2016.
	Leverage ratio buffer	Jan 2022	na	No Australian bank is currently designated as a G-SIB, so APRA does not intend to publish rules on the leverage ratio buffer.
<b>IRRBB</b>	Interest rate risk in the banking book	2018	1	Draft rule expected to be published in 2019.

<b>Leverage</b>	Existing (2014) exposure definition	Jan 2018	4	Final Basel III rule approved in July 2013, effective 1 January 2014. The rule (i) included the generally applicable US Tier 1 leverage ratio minimum requirement of 4% of Tier 1 capital to total on-balance-sheet assets, and (ii) introduced the supplementary leverage ratio (SLR) (ie the Basel III leverage ratio) minimum requirement of 3% of Tier 1 capital to total leverage exposure for all US banking organisations subject to the advanced approaches rule (ie banking organisations with total consolidated assets equal to \$250 billion or

				<p>more, or consolidated total on-balance-sheet foreign exposure equal to \$10 billion or more, and their subsidiaries), effective 1 January 2018. The SLR was revised in September 2014, consistent with the January 2014 Basel Committee revisions to the Basel III leverage ratio.</p> <p>In addition, in April 2014, the United States agencies adopted enhanced SLR standards for United States G-SIB bank holding companies and their insured depository subsidiaries. United States GSIB bank holding companies must maintain a leverage buffer greater than two percentage points above the minimum supplementary leverage ratio requirement of three percent, for a total of more than five percent, to avoid restrictions on capital distributions and discretionary bonus payments. Insured depository subsidiaries of US GSIBs must maintain at least a six percent supplementary leverage ratio to be considered "well capitalised" under the agencies' prompt corrective action framework. The enhanced SLR standards are effective 1 January 2018.</p>
	Revised (2017) exposure definition	Jan 2022	1	
<b>SIB</b>	G-SIB requirements	Jan 2016	4	Final G-SIB rule approved in July 2015, phase-in begins 1 January 2016, becoming fully effective 1 January 2019. The final rule requires US G-SIBs to calculate their surcharges under two methods and use the higher of the two surcharges. The first method is based on the Basel Committee framework and considers a G-SIB's size, interconnectedness, cross-jurisdictional activity, substitutability and complexity. The second method uses similar inputs but is calibrated to result in significantly higher surcharges and replaces substitutability with a measure of the firm's reliance on short-term wholesale funding.
	D-SIB requirements	Jan 2016	na	All US bank holding companies with total assets of \$50 billion or more are subject by regulation to enhanced prudential standards, including the risk-based capital, leverage, and liquidity requirements discussed above, as well as capital planning, stress testing, resolution planning and risk management requirements.

	CCyB, Liquidity, Remuneration, Leverage ratio (revised)	Dec 2017	4 for CCyB, liquidity and leverage ratio (revised); 1 for remuneration	<p>CCyB – As part of the implementation of the CCyB framework in 2013, the U.S. agencies approved the CCyB disclosure standards (ie, disclosures dealing with the geographical distribution of credit exposures subject to the CCyB). Reporting became effective January 1, 2014 for firms that have private sector credit exposures to jurisdictions in which the countercyclical buffer rate is higher than zero.</p> <p>Liquidity – The Federal Reserve adopted the Liquidity Coverage Ratio (LCR) disclosure standard in December 2016 and bank holding companies subject to the LCR began reporting 2Q 2017.</p> <p>Leverage Ratio (revised) – As noted above, the U.S. agencies adopted the two common disclosure templates contained in the Basel III leverage ratio framework and U.S. top-tier holding companies subject to the advanced approaches rule started disclosing the supplementary leverage ratio (SLR) effective 1 January 2015. The U.S. agencies revised the SLR consistent with the Basel revisions and updated the disclosure standards in September 2014 (with firm disclosures still effective 1 January 2015).</p>

Firms subject to the advanced approaches rule began reporting January 2014.</p> <p>GSIB Indicators – Every U.S. holding company with more than \$50 billion in total consolidated assets must disclose on a quarterly basis the 12 indicators used in the GSIB framework. On an annual basis, the Federal Reserve discloses the year-end values of the 12 GSIB assessment indicators that are sent to Basel for inclusion in the BCBS's global aggregates on the following website: <a href="https://www.ffiec.gov/nicpubweb/nicweb/Y15Snapshot.aspx">https://www.ffiec.gov/nicpubweb/nicweb/Y15Snapshot.aspx</a>.</p> <p>Prudential valuation adjustments – These disclosures are not applicable because the U.S. agencies follow U.S. GAAP in the capital calculation and disclosures. The U.S. agencies view U.S. GAAP as accurately capturing the fair value of assets, obviating the need for any further (prudentially based) mark-</p>

<b>Capital</b>	Countercyclical capital buffer (CCyB)	Jan 2016	(EU: 4)	(Follows EU process) National legislation is in force. Finansinspektionen (the supervisory authority) has been given the legal powers to set the countercyclical buffer rate. In September 2014, the rate was set at 1%, in June 2015 it was raised to 1.5 % and in March 2016 it was raised to 2%. The rate will be raised to 2.5 % in September 2019. The buffer rate entered into force in September 2015.

<b>SIB</b>	G-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process)

				<p>Finansinspektionen has the legal mandate to identify G-SIBs (G-SIIs in EU-language) and apply a so-called G-SII capital buffer. Historically Finansinspektionen has identified Nordea as a G-SIB. Nordea has not met the quantitative thresholds set by the BIS/FSB, and has instead been identified as G-SIB based on supervisory judgement, in the lowest bucket. Nordea is currently subject to a G-SII capital buffer of 1% of which has applied since 1 January 2016 (with gradual implementation until 1 January 2019). Finansinspektionen's primary motivation for pushing Nordea into the lowest bucket with supervisory judgement was a concern around Nordea's score bouncing around the threshold leading to regulatory uncertainty for Nordea regarding their G-SIB obligations. Finansinspektionen has over the last couple of years noted their score trajectory as downward and the risks of being unexpectedly designated as a G-SIB reduce the lower the score becomes. As from October 1<sup>st</sup>, 2018, Nordea is a Finnish bank and as such be under supervision of the Single Supervisory Mechanism of the ECB and the Finnish FSA. Finansinspektionen has based on Nordea's low scores, jointly together with the ECB and the Finnish FSA, agreed to not identify Nordea as a G-SIB in the 2018-exercise.</p>
	D-SIB requirements	Jan 2016	(EU: 4)	<p>(Follows EU process)</p> <p>National legislation is in force, according to which Finansinspektionen has been given all required mandates. In October 2015, Finansinspektionen decided to strictly follow the EBA guideline for O-SII identification (EU language for the D-SIB framework), implying that four Swedish banking groups were identified as O-SIIs. These banks are required to hold an O-SII capital buffer of 2% from 1 January 2016.</p> <p>Also, Finansinspektionen has been given the legal powers to set a systemic risk buffer. A systemic risk buffer of 3% CET1 has been applied to Sweden's four largest banks at group level from 1 January 2015. The system risk buffer and O-SII-buffer are not additive. (Additionally, another 2% CET1 requirement has been set for these banking groups in Pillar 2.)</p>

	D-SIB requirements	Jan 2016	(EU: 4)	(Follows EU process) The PRA's approach to identifying O-SIIs was published in February 2016 and is in accordance with Article 131 of Directive 2013/36/EU. The PRA publishes an updated list of UK O-SIIs to its website on an annual basis. The Financial Policy Committee's (FPC) framework for the Systemic Risk Buffer was published in May 2016. As part of the framework, the PRA published a Statement of Policy outlining its approach to the implementation of the Systemic Risk Buffer in December 2016. The framework and Statement of Policy will apply to ring-fenced banks and large building societies as defined in The Capital Requirement (Capital Buffers and Macro-prudential Measures) (Amendment) Regulation 2015 from 2019.
	Leverage ratio buffer	Jan 2022	(EU: 4,3)	(Follows EU process) The UK domestic leverage framework that came into force on 1 January 2016 includes a G-SII leverage ratio buffer.
