

# **Demography versus Debt**

By Charles Goodhart and Manoj Pradhan

## The Positive Labour Supply Shock from China and Eastern Europe

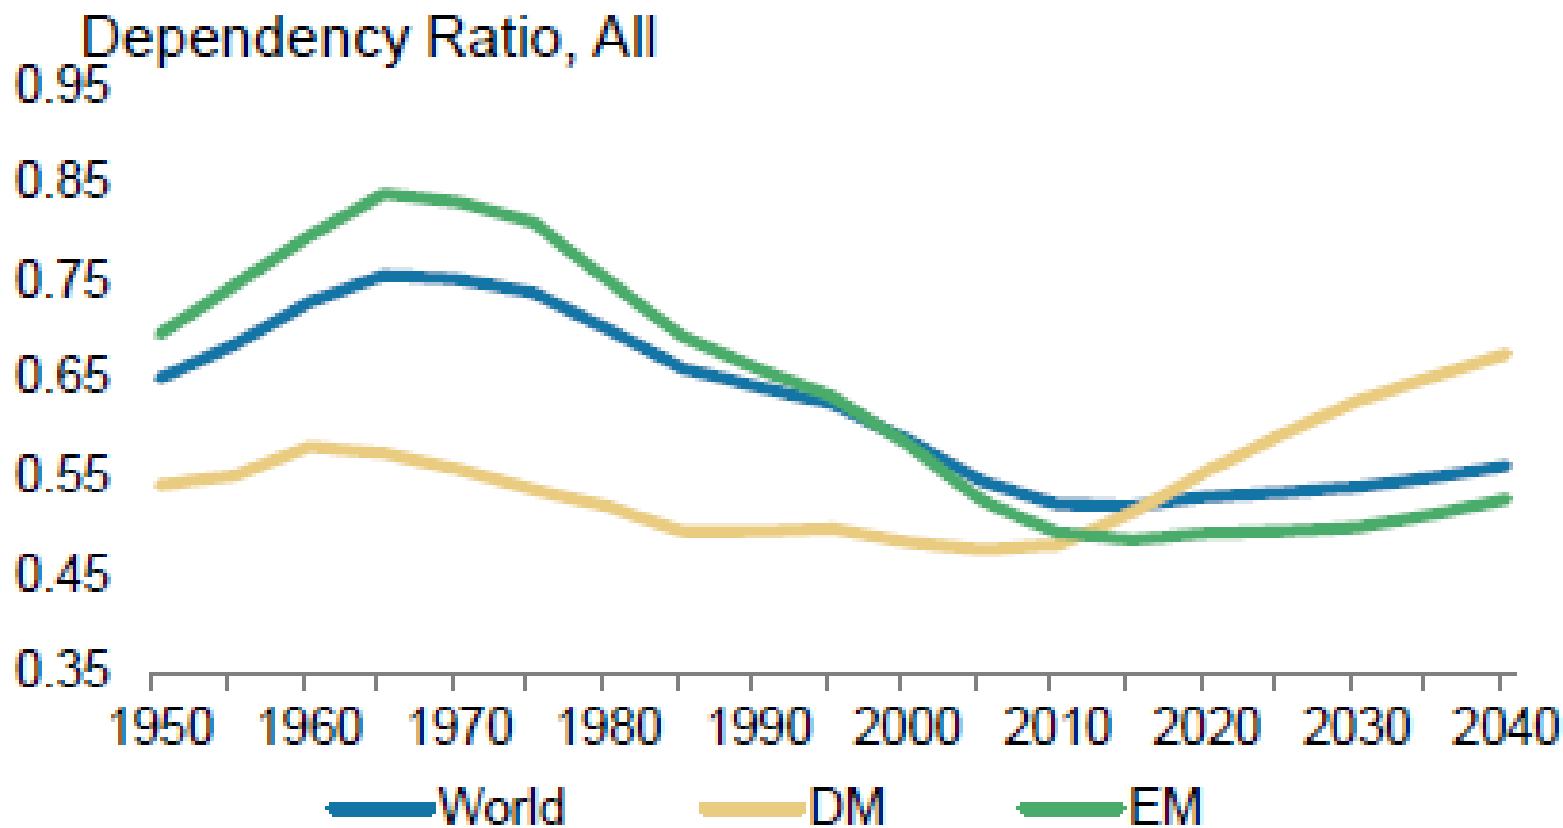

---

Source: UN Population Database, Morgan Stanley Research. Note: Industrial regions refers to DM economies

## Dependency Ratios Were Falling, Should Now Rise

---

Source: UN Population Database, Morgan Stanley Research

## Effects of Positive Labour Supply Shock

- 1) Shift of moveable production, notably manufacturing, to Asia, especially to China.
- 2) Collapse of power of private sector trade unions.
- 3) Stagnation of real wages.
- 4) More inequality within countries, less between countries.
- 5) Weakness of demand, deflationary pressures and savings glut.
- 6) Trend decrease in (nominal and real) interest rates.  
Increasing public sector deficits.

## Demographic trends now reversing

- Growth of working population slowing rapidly, (except India/Africa).
- Dependency ratio rising, armies of the old.

### Results:

- 1) Slower growth.
- 2) Need to shift resources to succour old, so higher taxes on workers.
- 3) Rebalancing of power between workers and capitalists/managers.
- 4) More inflationary pressures.
- 5) Higher interest rates.

## Mitigants

- 1) India/Africa.
- 2) Less generosity to old, (retirement, pensions, health).
- 3) Robotics.

- But are we now stuck in a debt trap?
- Despite GFC being ascribed to excessive debt/leverage, most DM debt ratios have risen since 2007, and EM debt ratios have, become high especially in China.

### Mitigants, so far:-

- 1) Rise in debt ratios offset by falling interest rates, so debt service ratios mostly stable, or even declining.
- 2) Bank leverage in DM brought down.
- 3) China under State control.

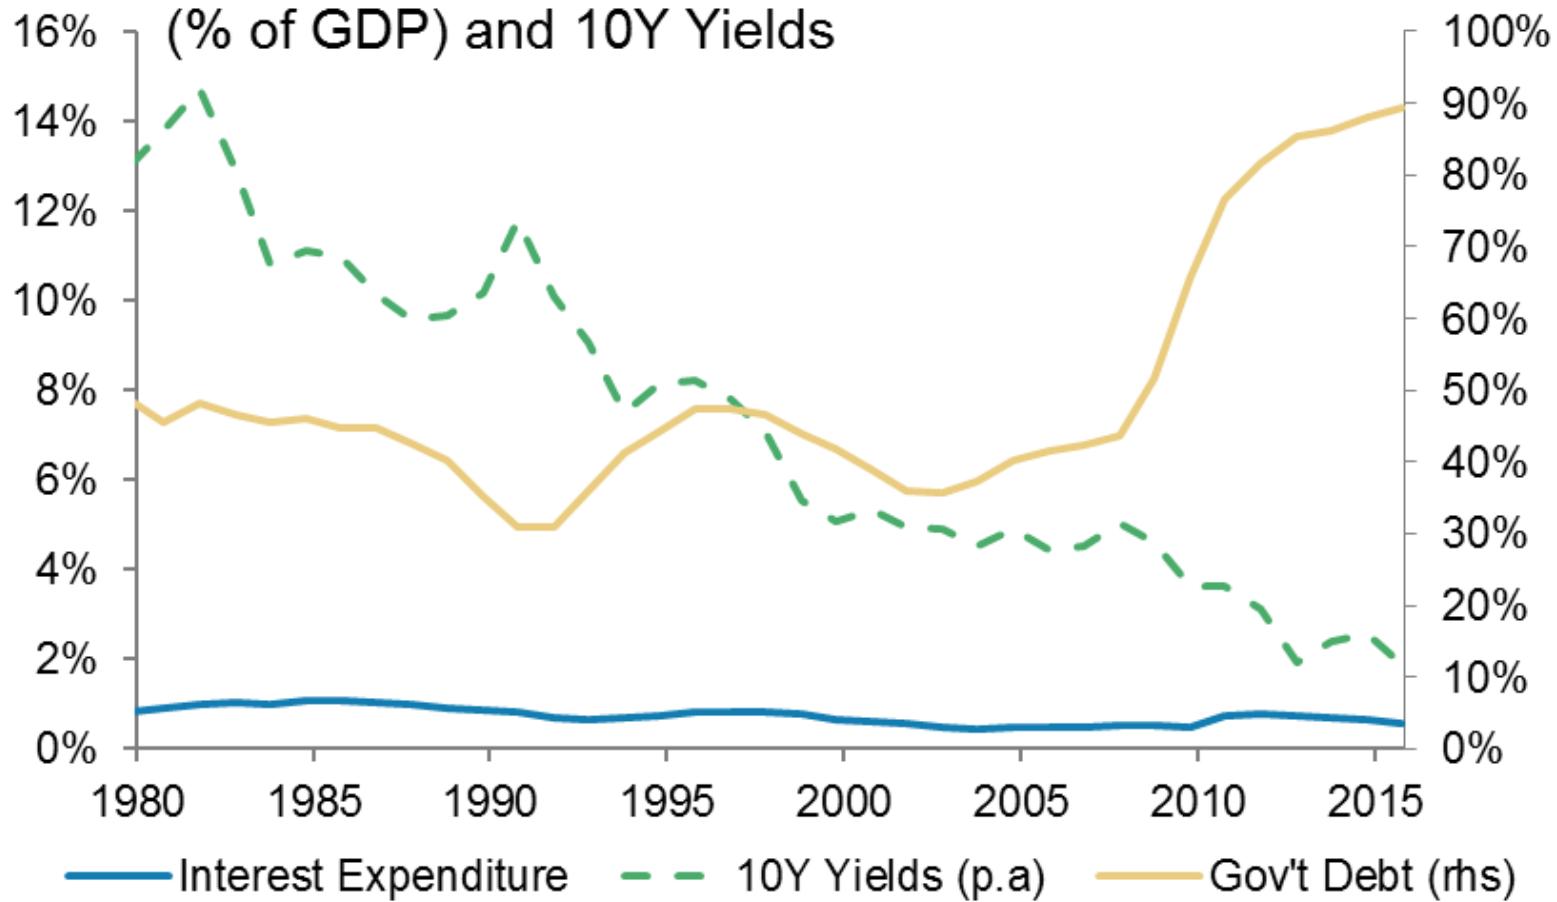

## Change since 4Q'07

	<b>HH</b>	<b>NFC</b>	<b>PSC</b>	<b>Gov't</b>	<b>Total</b>
US	-19	1	-18	43	24
EA	1	8	8	38	47
JPN	0	2	2	66	67
UK	-10	-16	-26	46	20
AUS	16	2	18	29	45

SAF	37	36	73	51	123
BRA	25	50	75	76	149
MEX	16	25	40	55	94
ARG	6	12	18	61	75

## UK Gov't Debt, Interest Expenditure (% of GDP) and 10Y Yields

But:

- 1) Interest rates have hit ZLB.
- 2) Growth has slowed, and will remain slow. Japan is good performer on output per worker.
- 3) Politics has gone populist.
  - The balance between growth and real interest rates is worsening.
  - Debt sustainability likely to become more of a problem.
  - Debt trap:  
Debt overhang → low interest rates  
low interest rates → more debt issuance

## Possible responses:-

Default	No, please
Unexpected inflation	No, please
Supply side reform	You wish
Negative interest rates	Politics and practicality
More equity finance	Politics and practicality
