

# Global Liquidity and Drivers of Cross-Border bank Flows

Eugenio Cerutti, Stijn Claessens, Lev Ratnovski

Does not represent views of IMF or FRB

# Motivation

- The financial cycle is increasingly global

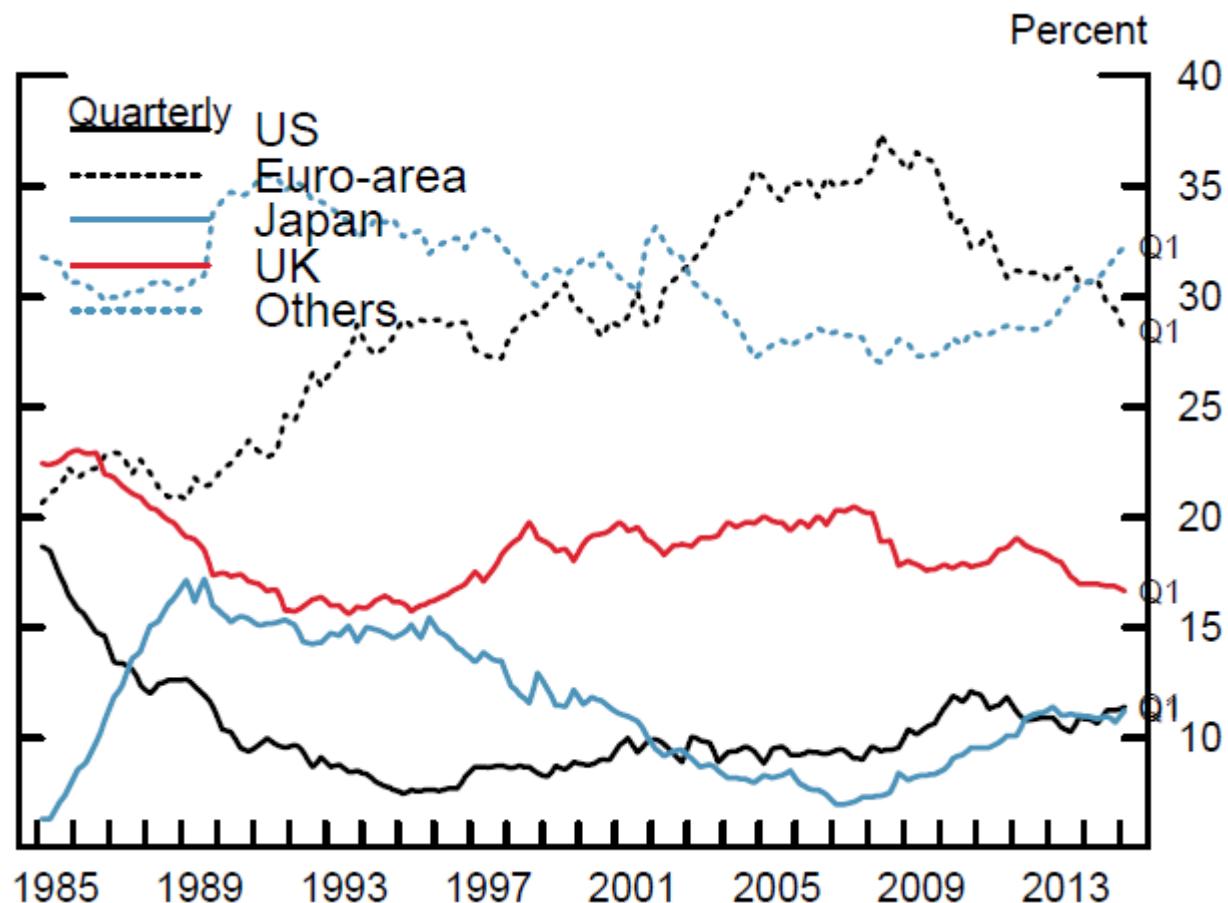

# Motivation

- Much of cross-border flows originate in or are intermediated by “financial center” economies
  - Bank claims by US/UK/EA exceed claims on them by ~20%
  - Plus, a strong intermediation role
- GL = “factors of cross-border flows that relate to monetary and financial conditions in financial center economies”
- Literature focuses on US factors of cross-border flows
- But European banks important too

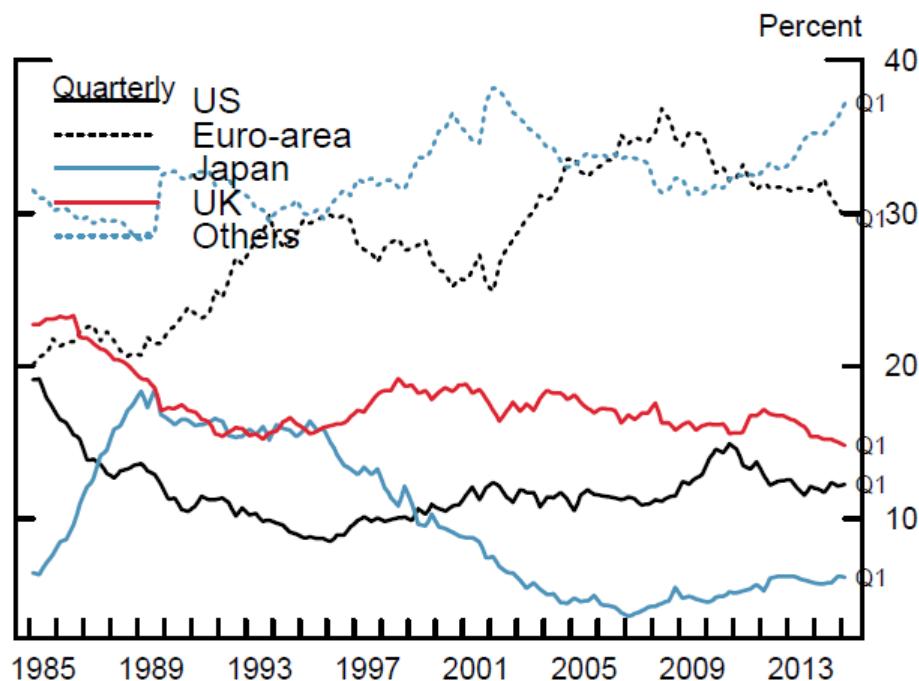

# Motivation

- EA/UK share in global cross-border claims

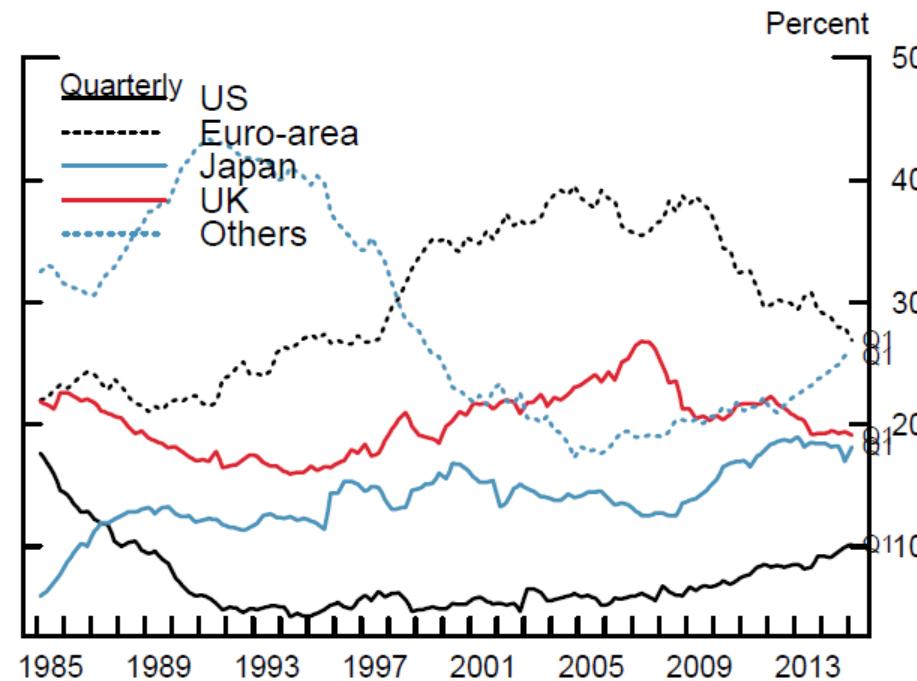

# Motivation

- Claims on:  
**banks**

- non-banks**

# Questions

- EA/UK factors associated with global flows?
- Relative importance of EA/UK vs. US factors?
- Crisis vs. outside crisis?

# Method

- BIS IBS, locational data
- 1990-2014, 77 borrower countries, banks/non-banks, FX adj.
- Known US factors:
  - VIX ([Bekaert et al., 2013, Rey, 2013](#))
  - TED spread, broker-dealer leverage ([Bruno & Shin, 2015a](#))
  - Real rates, term spread
  - REER ([Bruno and Shin 2015b, McCauley et al., 2015](#)),  
M2 growth
- **Replicate results for US on larger sample**
- **Check similar results for EA/UK and compare**

# Preview of results

- Cross-border flows driven by:
  - US monetary policy
  - EA/UK bank conditions
    - Ted spread (often UK)
    - Leverage of large banks (often EA)
- EA/UK banks especially important outside the crisis
  - US bank variables often insignificant outside the crisis

# US factors of cross-border flows, banks
