

# Profitability, Equity Capitalization and Net Worth at Risk

ECCBSO Financial Statement Analysis Working Group

30 August 2018 | 9th biennial IFC conference

## AGENDA

- ▶ Motivation and Importance
- ▶ Profitability, Equity Capitalization, Net Worth at Risk

# MOTIVATION AND IMPORTANCE

# Motivation and Importance

## Financial Statement Analysis Working Group (WG FSA)

-  Working Group of The European Committee of Central Balance-Sheet Data Offices (ECCBSO)
-  Scope is common microeconomic research on specific topics of the economic and financial situation of non-financial entities in an international setting.
-  Any field of financial statement analysis like profitability, equity endowment, liability structure or asset composition.
-  Structural, cross-sectional and time-series analyses are mainly applied.
-  Investigate whether accounting or institutional characteristics can explain differences in the results.

## Motivation and Importance

### NET WORTH AT RISK (NWaR)

- ❑ The concept first introduced by FSA WG in 2005
- ❑ NWaR can be considered as very important because it is a kind of stress test to evaluate sector-size level performance when having heavy losses
- ❑ Serves as a benchmark of minimum capital required in a given sector-size class enabling companies to absorb losses that might potentially arise
- ❑ For each company cumulative two-year net income figures in terms of total assets are calculated
- ❑ From the resulting two-year net income distributions in each sector-size combination, the 10th percentile is chosen, resulting in a time series of overlapping two-year values negative values result normally, these time series are consequently labeled Two-year Losses 90%.

## Motivation and Importance

### Conditional and Unconditional NWaR

- Conditional NWaR is calculated as follows: for each company cumulative two-year net income figures in terms of total assets are calculated . From the resulting two-year net income distributions in each sector-size combination the 10th percentile is chosen; resulting in a time series of overlapping two year values. From the time series, the minimum level of the time span 1987-2015 is chosen for conditional NWaR 90%.
- For the unconditional NWaR 90%, the mean of the last eight conditional NWaR 90% is used. The differentiation of conditional and unconditional NWaR is important to assess the impact of recessions on the income distribution.
- Percentage of the companies with Net Worth below conditional NWaR” is important in that this displays how well a sector is endowed with equity to cope with the NWaR loss scenario.

# Profitability, Equity Capitalization and Net Worth at Risk

# Unconditional Net Worth at Risk and Cumulative two year losses at 10th percentile

## Spain- Unconditional Net Worth at Risk and Cumulative two year losses at 10<sup>th</sup> percentile

### Manufacturing, Trade and Construction Companies ( NACE Rev.2 C,G,F sectors)
