Data on the balance sheet positions of households and financial and non-financial corporations in Slovenia

Nina Bostner

1. Introduction

Financial accounts statistics represent an important analytic tool for analysing financial transactions between institutional sectors within the economy and financial interactions between the domestic sectors and the rest of the world.

The methodological basis for the compilation of the financial accounts is the ESA 95 (the European System of Accounts). The financial accounts disclose the stocks and flows that individual institutional sectors hold in individual financial instruments as claims and as liabilities. The financial accounts disclose how a surplus is distributed or a deficit is covered by transactions in financial assets (claims) and liabilities.

The subjects of financial accounts statistics are financial transactions, valuation and other changes and the financial balance sheet. The financial balance sheet of a sector shows financial assets and liabilities at the end of a specified date.

In the first part of the paper the financial accounts will be presented in theory, followed by a description of the institutional sectors, in which the individual institutional units are merged, and of financial instruments, through which financial transactions take place between units. In the second part I will focus only on the financial balance sheet of the Slovenian non-financial corporations, financial companies (for the banking sector) and households. The financial balance sheet of a sector shows financial assets and liabilities at the end of a specified date. Thus, for the period from 2004 to 2009, a detailed analysis for each sector will be made to present what happened during that period and what was the impact of the current crisis on these sectors.

2. European System of Accounts 1995 (ESA 95)

2.1. ESA 95 methodology

The methodological basis for the compilation of the financial accounts is the European System of Accounts 1995 (ESA 95).

The financial accounts disclose the stocks and flows that individual institutional sectors hold in individual financial instruments as claims and as liabilities. The financial accounts disclose how a surplus is distributed or a deficit is covered by transactions in financial assets (claims) and liabilities.

The net item of a financial account, which represents transactions in financial assets minus transactions in liabilities, should as a rule be equal to the net item of the non-financial (capital) account (net borrowing or net lending B.9).

The basic principles of the ESA 95 are:

- all assets and liabilities are valued at current market value;
- the difference between financial assets and liabilities represents the net financial assets;
- the difference between total assets (financial and non-financial) and liabilities represents net worth;
- net worth plus shares and other equity represents own funds.

Picture 1

**Balance sheet and net items**

![Balance sheet diagram]

Source: ESA 95.

The items in the financial accounts and the items in the balance sheet are not equal in value because of the aforementioned ESA 95 principles.

Financial accounts may be non-consolidated or consolidated. In a consolidated account claims and liabilities between institutional units within a particular sector are eliminated.

Picture 2

**Financial Accounts Model**

![Financial accounts model diagram]

2.2. Institutional sectors

Institutional units are economic entities that are capable of owning goods and assets, incurring liabilities and engaging in economic activities and transactions with other units in their own right (ESA 95, p. 8).

For the purposes of the system, the institutional units are grouped together into five mutually exclusive institutional sectors composed of the following types of units:

- non-financial corporations;
- financial corporations;
- general government;
- households;
- non-profit institutions serving households.

The five sectors together make up the total economy. Each sector is also divided into subsectors.

The financial accounts of Slovenia disclose the stock of and flows in financial assets and liabilities in terms of different sectors or subsectors under the Standard Classification of Institutional Sectors (Official Gazette of the Republic of Slovenia, No. 13/06).

2.3. Financial instruments

The stock of and changes in financial assets and liabilities under the ESA 95 methodology are disclosed by individual financial instrument, and are equal on both the asset and the liability sides.
Financial instruments are divided into seven groups: monetary gold and Special Drawing Rights (SDRs) (F.1), currency and deposits (F.2), securities other than shares (F.3), loans (F.4), shares and other equity (F.5), insurance technical reserves (F.6) and other accounts receivable/payable (F.7) (ESA 95, p. 93).

Each individual financial instrument that a particular unit holds as a financial asset has a counterpart item in the liabilities of another unit, and vice versa. The only financial asset that does not have a counterpart in liabilities is F.1 (Monetary gold and SDRs).

2.4. Data sources of Slovenian financial accounts

Primary and secondary sources are used for the compilation of the financial accounts.

Primary sources:

- quarterly data (stocks and transactions) based on direct reporting by individual institutional units:
  - non-financial corporations (S.11): reporting threshold: balance sheet total of EUR 1 million;
  - financial corporations (S.12): reporting threshold: balance sheet total of EUR 1 million;
  - general government units (S.13): reporting threshold: balance sheet total of EUR 8 million.
- quarterly IIP (International Investment Position) and BOP (Balance of Payments) data;
- securities statistics.

Secondary sources:

- monetary and banking statistics;
- other financial institution statistics;
- public finance statistics.

Annual financial accounts have been compiled from 2001, and quarterly financial accounts from the first quarter of 2004.

3. The analysis of the financial accounts of Slovenia by institutional sectors

The analysis of the financial accounts of Slovenia is focused on the following sectors: non-financial corporations (S.11), financial corporations (S.12) and households (S.14) in the period from 2004 to 2009. In this studied period, Slovenia has joined the European Union, has successfully accepted the euro, has experienced financial and economic prosperity, and has engaged with financial and economic crisis. The purpose of the analysis is to show the analytical value of financial accounts statistics.

3.1. The international financial crisis and its impact on Slovenia

3.1.1. Background and causes

The present financial crisis is a crisis caused by an insolvent United States banking system. It is considered to be the worst financial crisis since the Great Depression of the 1930s. It has resulted in the collapse of large financial institutions, the bailout of banks by national governments and downturns in stock markets around the world (Wikipedia, 2010).

Before August 2007 no one thought that the financial system could collapse. Central banks were able to lend when needed, deposit insurance and investor protections made it possible to free individuals from worrying about the security of their wealth, regulators and supervisors watched over individual institutions and kept their managers and owners from taking on too much risk. Prosperity and stability were evidence that the system worked, inflation was low and growth was high (BIS 79th Annual Report, 2009, p. 3).
The financial system is based on trust, and in the wake of the Lehman Brothers failure in September 2008, that trust was lost. The lenders started to doubt the quality of loans, their insurance and the chance of repayment, and the investors started to doubt the long-term safety of their investments. The loss of trust in the financial system has caused a global financial crisis (BIS 79th Annual Report, 2009, p. 4). The crisis rapidly developed and spread into a global economic shock, resulting in a number of European bank failures, declines in various stock indices, and large reductions in the market value of equities and commodities (Wikipedia, 2010).

The impact of the financial crisis on the (real) economy was already noticeable in 2008, when the rapid stopping of economic growth was evident, followed by the crossing into negative territory (see Picture 3).

The annual GDP real growth rate has decreased from 2% in the middle of 2008 to over -4% in the middle of 2009 in the euro area, and a similar development has happened in the US. The turnaround was even greater in Slovenia, where, in the second quarter of 2009, GDP decreased by 9.3% compared to the second quarter of 2008. This was the third GDP volume decrease in a row and the deepest in the current economic crisis. In the first half of 2009, GDP decreased by 8.8% compared to the same period of 2008.

3.2. Reflection of the financial crisis on financial accounts in Slovenia

3.2.1. Non-financial corporations
Non-financial corporations had 20% of the total financial assets and 38% of the total liabilities in the financial accounts of Slovenia at the end of 2009. The financial assets of non-financial companies accounted for 131% of GDP, and liabilities for 250% of GDP.
Non-financial companies in the euro area had 15% of the total financial assets and 24% of the total liabilities in the financial accounts at the end of 2009. The financial assets of non-financial companies accounted for 179% of GDP, and liabilities for 276% of GDP in the euro area.

The financial assets of non-financial corporations amounted to EUR 45,679 million at the end of 2009, up 53% or EUR 15,913 million over the observation period of 2004 to 2009, the largest increase of EUR 7,954 million coming in 2007.

Investments in shares and other equity accounted for the largest proportion of non-financial corporations’ assets at the end of 2009 (EUR 18,664 million or 41% of the total). This was up 48% over the observation period, the largest increase being recorded in 2007 (EUR 2,150 million of net purchases and EUR 1,842 million of positive revaluation changes), but there was actually a decline of EUR 1,233 million in 2008, with negative revaluation changes contributing EUR 2,671 million towards the decline. At the end of 2009 non-financial corporations’ largest investments were in their own sector (73%, compared with 81% at the end of 2004) and in the rest of the world (19%, compared with 10% at the end of 2004). Investments in shares accounted for 42% of the total at the end of 2009, other equity for 57%, and mutual fund shares for 1%.

Other accounts receivable stood at EUR 16,271 million at the end of 2009 (36% of financial assets), and were up 51% over the observation period. Receivables from trade credits and advances accounted for the majority (83%) of other accounts receivable, of which 55% were intrasectoral (compared with 54% at the end of 2004), and 34% were from the rest of the world (the same as at the end of 2004). The favourable economic climate saw non-financial corporations increase their intrasectoral receivables (by EUR 1,322 million) and receivables from the rest of the world (EUR 530 million) in 2007, but in 2008 and 2009 the financial turmoil meant there was a decline of EUR 326 million.

Non-financial corporations’ loans granted amounted to EUR 5,916 million (13% of financial assets) at the end of 2009. The largest proportion was made within the sector, the rest of the world and households accounting for the remainder. The amount of intercorporate lending increased in 2009 (to EUR 330 million, of which the majority was in the form of long-term...
loans), while lending to non-resident corporations increased to EUR 209 million. There was an increase over the observation period in the proportions accounted for by borrowing by the rest of the world (from 15% at the end of 2004 to 27% at the end of 2009), while the proportion accounted for by non-financial corporations declined from 65% to 61%, and by households from 13% to 7%.

Non-financial corporations’ currency and deposits stood at EUR 4,020 million at the end of 2009 (9% of financial assets); domestic banks accounted for almost all of this (94%). Currency and deposits increased by 45% over the observation period.

Non-financial corporations in the euro area had most financial assets in the form of shares and other equity (46%), other accounts receivable (21%), loans (18%) and currency and deposits (11%). In comparison with the euro area, a greater proportion of other accounts receivable (+15 pp) and smaller proportions of loans (-5 pp), shares and other equity (-5 pp), and currency and deposits (-2 pp) have been observed in the financial assets of non-financial companies in Slovenia.

Non-financial corporations’ total liabilities stood at EUR 87,320 million at the end of 2009, up EUR 30,769 million or 54% over the observation period, the largest increase of EUR 16,641 million coming in 2007.

Liabilities from shares and other equity amounted to EUR 36,385 million at the end of 2009 (42% of liabilities), up 21% (EUR 6,306 million) over the observation period, mostly as a result of positive revaluation changes (EUR 3,792 million). There was a decline of 18% or EUR 7,587 million in 2008 (as a result of negative revaluation changes). Public limited companies accounted for 45% of the total, with other forms of equity accounting for the remaining 55%. The largest holders of equity in non-financial corporations were non-financial corporations (37%), households (23%), the rest of the world (17%), general government (16%) and other financial intermediaries (3%).

Picture 4

Holders of equity in non-financial corporations by sectors from 2004 to 2009
(stock at year-end, EUR million)

The stock of loans totalled EUR 33,431 million at the end of 2009 (38% of liabilities), up 114% or EUR 17,820 million over the observation period, the largest increase of EUR 6,479 million coming in 2007, primarily as a result of high economic growth, favourable interest rates and mergers and acquisitions activity. Liabilities from loans remained almost unchanged in 2009 relative to 2008, as a result of the financial turmoil and the resulting crisis in the real sector. Banks accounted for the largest proportion of non-financial corporations’ liabilities from loans at the end of 2009 (63% of the total), followed by the rest of the world (14%), non-financial corporations (11%) and other financial intermediaries (9%).

Picture 5
Liabilities of non-financial corporations from loans
by sectors from 2004 to 2009
(stock at year-end, EUR million)

The amount of intercorporate borrowing increased in 2009 (by EUR 330 million), followed by borrowing from banks (by EUR 211 million) and from other financial intermediaries (by EUR 151 million EUR), while borrowing from the rest of the world decreased (by EUR 404 million) (see Picture 6).

Issues of debt securities accounted for a negligible proportion of non-financial corporations’ financing (1% of total liabilities at the end of 2009).

Other accounts payable totalled EUR 16,527 million at the end of 2009 (19% of total liabilities), and consisted primarily of trade credits and advances (75%), mostly to non-financial corporations (60%). Other accounts payable saw their largest increase, of EUR 2,332 million, in 2007, but declined by EUR 675 million in 2009 (for the first time in the observation period).

Non-financial corporations in the euro area had most of their liabilities in the form of shares and other equity (49%), loans (34%) and other accounts payable (12%). In comparison with the euro area, greater proportions of other accounts payable (+7 pp) and loans (+4 pp) and a smaller proportion of shares and other equity (-7 pp) have been observed in the liabilities of non-financial companies in Slovenia.
The non-financial corporations sector recorded a deficit in financial assets relative to liabilities over the observation period, as a significant proportion of non-financial corporations’ assets is in the form of non-financial assets. The deficit stood at EUR 41,641 million at the end of 2009 (EUR 26,785 million at the end of 2004), having declined in 2008 for the first time by EUR 1,482 million, primarily as a result of the effect of positive net revaluation changes in shares and other equity (EUR 5,806 million), but it again increased in 2009 (by EUR 741 million).

Non-financial corporations’ intrasectoral financial claims and liabilities totalled EUR 25,764 million at the end of 2009, equivalent to 56% of their total financial assets, and 30% of their total liabilities.

The deficit in financial assets relative to liabilities of non-financial companies in Slovenia accounted for 119% of GDP at the end of 2009 (up 20 pp over the observation period), and in the euro area accounted for 97% of GDP (up 8 pp). Leverage in Slovenia, calculated as the ratio of debt¹ and capital, stood at 94% (+41 pp) and in the euro area at 75% (+9 pp). The debt of non-financial corporations relative to GDP in Slovenia accounted for 98% (+39 pp), and in the euro area for 102% (+20 pp). Debt relative to financial assets of non-financial companies in Slovenia amounted to 75% (+21 pp), and in the euro area to 57% (+3 pp). The data show that the financial situation of non-financial corporations in Slovenia deteriorated over the observation period as a result of increased borrowing and that their indebtedness was already higher than in the euro area at the end of 2009.

¹ Debt consists of debt securities (F.33) and loans (F.4).
3.2.2. **Financial corporations**

The financial corporations sector is subdivided into five subsectors (ESA 95, p. 25):

- the central bank (S.121);
- other monetary financial institutions (S.122);
- other financial intermediaries, except insurance corporations and pension funds (S.123);
- financial auxiliaries (S.124);
- insurance corporations and pension funds (S.125).

Considering that other monetary financial institutions are the largest and most important subsector within financial corporations, and that the financial crisis has had a very important impact on banks, a detailed analysis only of this subsector will be presented.

3.2.2.1. **Other monetary financial institutions**

The subsector “other monetary financial institutions” comprises commercial banks, savings banks and money market funds. There were 22 banks, three savings banks and two money market funds in Slovenia at the end of 2009.

Banks had 23% of the total financial assets and 22% of the total liabilities in the financial accounts of Slovenia at the end of 2009. Financial assets of banks accounted for 152% of GDP, and liabilities for 148% of GDP.

---

2 The term “banks” is used in the material for the subsector “Other monetary financial institutions (S.122)".

</table>

The financial assets of banks stood at EUR 53,063 million at the end of 2009, up 117% or EUR 28,646 million over the observation period, the largest increase of EUR 8,761 million coming in 2007.

Picture 7
Claims of banks from loans by sectors from 2005 to 2009
(quarterly transactions, EUR million)

Bank loans stood at EUR 37,914 million at the end of 2009, up 180% over the observation period, the largest increase of EUR 8,840 million coming in 2007 (the largest increases were recorded by loans to non-financial corporations (EUR 4,699 million or 37%), loans to
households (EUR 1,413 million of 26%) and loans to the rest of the world (EUR 1,304 million), while the increase in 2008 compared to 2007 reached 68%, but was still higher than in 2006. Loans granted increased only EUR 1,735 million in 2009, which indicates decreasing lending activity (as a result of higher uncertainty in financial markets and reduced demand for savings transmission between loss-making sectors and excess supply sectors). At the end of 2009 banks held their largest stocks of loans with non-financial corporations (55%) and households (22%).

Banks held investments in debt securities in the amount of EUR 8,091 million at the end of 2009, primarily foreign securities (42%, compared with 6% at the end of 2004) and government securities (40%, compared with 39% at the end of 2004). Investments in debt securities increased by 20% in 2009, and by 23% over the observation period. Banks held EUR 1,815 million of claims from central bank bills at the end of 2006, but the introduction of the euro in 2007 meant that they were replaced by investments in foreign debt securities. Investments in government debt securities and in intrasectoral securities increased in 2009 (by EUR 1,320 million and EUR 393 million, respectively), while investments in foreign debt securities declined (by EUR 310 million).

**Picture 8**

**Claims of banks from securities other than shares by sectors from 2004 to 2009**

(stock at year-end, EUR million)

Banks held EUR 4,884 million of currency and deposits at the end of 2009, of which 59% was with the rest of the world (compared with 43% at the end of 2004), 30% was with the central bank (43% at the end of 2004), and 10% with domestic banks (14% at the end of 2004). Banks' currency and deposits increased by 71% over the observation period, declined for the first time by 3% during 2008 (a decline in deposits in the rest of the world, and an increase in deposits at the central bank), but again increased by 22% during 2009 (an increase in deposits in the rest of the world, at the central bank, and intrasectoral deposits).

Banks' liabilities stood at EUR 51,534 million at the end of 2009, up 9% at the end of 2008, and up EUR 28,003 million or 119% over the observation period, the largest increase of EUR 8,940 million coming in 2007.

The stock of deposits in banks stood at EUR 30,903 million at the end of 2009, up 9% or EUR 2,435 million during 2009, and up EUR 14,807 million or 92% over the observation period.
period, the largest increase of EUR 4,476 million coming in 2007. The largest deposits in banks at the end of 2009 were held by households (45% of the total, compared with 61% at the end of 2004), followed by the rest of the world (17%, compared with 9% at the end of 2004) and non-financial corporations (12%, compared with 16% at the end of 2004). The largest increases in 2009 were recorded by general government deposits (EUR 2,058 million; an increase in non-transferable deposits), central bank deposits (EUR 885 million; increased liquidity injection into the banking system), and household deposits (EUR 642 million), and the largest decline was recorded by the rest of the world (EUR 1,448 million).

Picture 9

Liabilities of banks to households from deposits from 2005 to 2009

(quarterly transactions, EUR million)

Banks’ liabilities from loans totalled EUR 11,714 million at the end of 2009, down 6% or EUR 754 million for the first time during 2009, and EUR 8,210 million or 234% over the observation period. Loans raised in the rest of the world accounted for the largest proportion of banks’ loans at the end of 2009 (79% of the total, of which 81% was from members of the EMU), while the proportion of intersectoral borrowing also increased in 2009 (to 21% at the end of the year, compared with 1% at the end of 2004).

Funding from the rest of the world via deposits and loans in 2008 (EUR 1,434 million) was just 32% of that recorded in 2007, an indication that this source of funding was being closed, and in 2009, the rest of the world stopped funding domestic banks.

Banks had EUR 4,336 million of liabilities from shares and other equity at the end of 2009. Liabilities from unquoted shares were up EUR 434 million in 2009, while liabilities from quoted shares remained almost unchanged during 2009. The largest holder of equity in banks at the end of 2009 was the rest of the world, which accounted for 35% of the total (compared with 28% at the end of 2004), followed by the general government sector (27%, compared with 32% at the end of 2004) and non-financial corporations (20%).

Banks’ liabilities from issued debt securities totalled EUR 4,253 million at the end of 2009, up 101% during 2009, and up EUR 2,816 million or 196% over the observation period. The investors in debt securities as at the end of 2009 were the rest of the world (53%, compared with 16% at the end of 2004), banks (25%, compared with 18% at the end of 2004) and insurance corporations and pension funds (12%, compared with 22% at the end of 2004).
Banks had a surplus of financial assets over liabilities of EUR 1,530 million at the end of 2009. The largest surplus was vis-à-vis non-financial corporations (EUR 17,293 million), while the largest deficits were vis-à-vis the rest of the world (EUR 8,283 million) and households (EUR 5,785 million).

Banks’ intrasectoral financial claims and liabilities totalled EUR 4,239 million at the end of 2009, equivalent to 8% of their total financial assets/liabilities.

As in the euro area, financial accounts data for the central bank and other monetary financial institutions are not separate. Slovenia will be compared with the euro area at the level of monetary financial institutions (S.121 and S.122).

The financial assets of monetary financial institutions in Slovenia stood at EUR 60,506 million and their liabilities stood at EUR 58,570 million at the end of 2009, which represented 26% of the total financial assets and 25% of the total liabilities in the financial accounts of Slovenia. In the euro area, monetary financial institutions had 31% of the total financial assets and 30% of the total liabilities in the euro area financial accounts at the end of 2009.

The financial assets of monetary financial institutions in Slovenia accounted for 173% of GDP (361% in the euro area), and liabilities stood at 168% of GDP (352% in the euro area), which indicates a lesser deepness of financial intermediation in Slovenia.

In Slovenia, the share of financial assets of monetary financial institutions in the financial assets of all financial corporations stood at 79%; in the euro area the figure was 63%, which shows the relatively greater importance of monetary financial institutions in Slovenia.

Monetary financial institutions in Slovenia had most investments in loans (63%), debt securities (21%) and currency and deposits (12%), and the largest liabilities from currency and deposits (63%), loans (20%) and shares and other equity (9%). Monetary financial
institutions in the euro area had the largest proportion of their financial assets in loans (39%), currency and deposits (29%), debt securities (21%) and shares and other equity (6%), and the largest proportion of their liabilities from currency and deposits (70%)\(^3\), debt securities (17%), shares and other equity (9%) and other accounts payable (4%).

A comparison with the euro area shows that monetary financial institutions in Slovenia had on the financial assets side a higher proportion of loans (+24 pp) and smaller proportions of currency and deposits (-17 pp) and shares and other equity (-3 pp), and on the liabilities side a higher proportion of loans (+20 pp) and lower proportions of debt securities (-10 pp) and currency and deposits (-7 pp).

### 3.2.3 Households

Households had 17% of the total financial assets and 5% of the total liabilities in the financial accounts of Slovenia at the end of 2009. The financial assets of households accounted for 113% of GDP, and liabilities for 33% of GDP.

Households in the euro area had 17% of the total financial assets and 6% of the total liabilities in the financial accounts at the end of 2009. Financial assets of households accounted for 202% of GDP, and liabilities for 72% of GDP in the euro area.

The **financial assets** of households amounted to EUR 39,274 million at the end of 2009, up EUR 13,601 million or 53% over the observation period, the largest increase of EUR 5,369 million coming in 2007.

---

\(^3\) In the euro area, the financial accounts liabilities of monetary financial institutions from loans are recorded among deposits.
Households held EUR 20,528 million of currency and deposits at the end of 2009, 52% of their total financial assets, of which currency accounted for 29% (compared with 19% at the end of 2004), and deposits for 71% (compared with 81% at the end of 2004).

Claims from currency amounted to EUR 5,875 million at the end of 2009, up 140% or EUR 3,423 million over the entire period, an average increase of 23% each year, the largest increase coming in 2008 (EUR 1,121 million). The proportion of households’ financial assets accounted for by currency increased from 10% at the end of 2004 to 15% at the end of 2009. The rest of the world accounted for 88% or EUR 5,181 million of households’ claims from currency at the end of 2009 (compared with 73% or EUR 1,779 million at the end of 2004), this figure consisting of estimated holdings of currency at home. It is estimated that a portion of the currency has been converted into other instruments, mostly investments in real estate, particularly in Croatia, transfers to relatives in the rest of the world, and investments in foreign securities bypassing domestic brokers. Claims from currency from the central bank amounted to EUR 655 million at the end of 2009 (11% of the total claims from currency). The figure increased by EUR 188 million in 2009, households’ demand for currency rising because of the uncertain conditions on the financial markets.

Claims from deposits stood at EUR 14,653 million at the end of 2009, 37% of households’ total financial assets, up 42% or EUR 4,298 million over the entire period, an average increase of 7% each year. The largest increases in deposits were recorded in 2007 (EUR 1,142 million) and 2008 (EUR 1,221 million). The proportion of financial assets accounted for by deposits ranged from 35% to 40% over the observation period. The majority of households’ deposits were held by domestic banks (93%).
At the end of 2009 households held EUR 11,335 million in shares and other equity, 29% of their total financial assets. These investments increased by EUR 3,101 million over the entire period, the largest increase being recorded in 2007 (EUR 560 million of net purchases and EUR 2,564 million of positive revaluation changes), but the largest decline being recorded in 2008 (EUR 245 million of net sales and EUR 3,078 million of negative revaluation changes). Households realised EUR 1,303 million of net purchases over the observation period, comprising increases in investments in other equity (of EUR 445 million), domestic and foreign mutual funds (of EUR 259 million) and mutual pension funds (of EUR 589 million), and an increase in investments in shares (of EUR 9 million). Non-financial corporations accounted for 74% of households’ investments at the end of 2009 (compared with 66% at the end of 2007), investment funds for 11% (19% at the end of 2007), mutual pension funds for 9% and the rest of the world for 4%.

Insurance technical reserves accounted for 10% of households’ total financial assets and stood at EUR 3,912 million at the end of 2009, up EUR 522 million on 2009, and up 110% or EUR 2,045 million over the observation period. Life insurance reserves accounted for 53% of the total insurance technical reserves at the end of 2009, pension funds reserves for 28% and other technical reserves for 19%. Households’ claims were primarily from domestic insurance corporations and pension companies (98%).

Other accounts receivable stood at EUR 2,121 million at the end of 2009, or 5% of households’ total financial assets, up EUR 714 million over the observation period. The majority of other accounts receivable were from non-financial corporations (78%) and the general government sector (14%).

Households in the euro area had most of their financial assets in the form of currency and deposits (36%), insurance technical reserves (30%), shares and other equity (23%) and debt securities (8%) at the end of 2009. Compared with the euro area, households in Slovenia had a greater proportion of investments in currency and deposits (+16 pp) and shares and
other equity (+6 pp), at the expense of smaller shares of investment in insurance technical reserves (-20 pp) and debt securities (-7 pp).

Households’ liabilities totalled EUR 11,662 million at the end of 2009, up 5% or EUR 593 million on the end of 2008, and up 106% or EUR 5,997 million over the observation period, the largest increase coming in 2007 (24% or EUR 1,936 million). At the end of 2009 banks accounted for 72% of households’ liabilities, other financial intermediaries for 12% and non-financial corporations for 11%.

Picture 13

**Investments by households in shares and other equity from 2004 to 2009**

(stock at year-end, EUR million)

![Graph showing investments by households in shares and other equity from 2004 to 2009.](image)

**Loans** taken amounted to EUR 10,208 million at the end of 2009, accounting for 88% of all household liabilities (compared with 78% at the end of 2004). This figure was up 130% or EUR 5,776 million over the observation period, an average increase of 17% each year, the largest increase coming in 2007 (EUR 1,823 million or 27%). The increase in 2008 was EUR 1,072 million, and in 2009 EUR 599 million (evident slowdown in borrowing). Domestic banks (83%, compared with 77% at the end of 2004) and other financial intermediaries (12%) accounted for the majority of household loans taken at the end of 2009, of which 86% was in the form of long-term loans.

Loans taken from banks increased by EUR 2,591 million between the end of 2005 and the end of 2007, but deposits at banks by just EUR 1,804 million. The loans taken increased by EUR 891 million in 2008, just 63% of the increase in 2007, while the increase in deposits at banks was at the level seen in 2007 (for EUR 1,090 million). The loans taken increased by EUR 584 million in 2009 (41% of the increase in 2007), while the increase in deposits at banks was at the level of the loans taken (for EUR 619 million).

Households’ **other accounts payable** stood at EUR 1,454 million at the end of 2009, or 12% of the total liabilities, up EUR 221 million over the entire period. Non-financial corporations accounted for the majority (63%) of households’ other accounts payable, and the general government sector for 14%.
Households in the euro area had most of their liabilities in the form of loans (89%) at the end of 2009, which is similar to that of Slovenia.

Households recorded a surplus of financial assets over liabilities during the observation period. The surplus increased by EUR 7,605 million or 38% over the observation period to stand at EUR 27,612 million at the end of 2009. The largest increase was recorded in 2007 (EUR 3,433 million), but there was a decline of EUR 1,661 million in 2008 (EUR 1,403 million of positive net transactions, and EUR 3,064 million of negative revaluation changes), followed by an increase of EUR 2,335 million in 2009 (EUR 1,396 million of positive net transactions, and EUR 939 million of positive revaluation changes). At the end of 2009 households held the largest surpluses vis-à-vis non-financial corporations (EUR 9,633 million, primarily from shares and other equity), the rest of the world (EUR 6,410 million, primarily from estimated holdings of currency) and banks (EUR 5,785 million).

The surplus of financial assets relative to liabilities of households in Slovenia accounted for 79% of GDP at the end of 2009 (up 5 pp over the observation period), and in the euro area accounted for 129% of GDP (down 2 pp). The debt of households in Slovenia stood at 29%, and in the euro area at 65% of GDP. Debt relative to financial assets of households in Slovenia accounted for 26% and in the euro area for 32%. The data show that the worse financial situation of households in Slovenia was a result of lower disposable financial assets; however, households’ indebtedness in Slovenia was lower than in the euro area.

4. Conclusion

Financial accounts statistics in Slovenia have developed only in recent years, so knowledge of them is rather limited. The purpose of this paper is to contribute to a better understanding of financial accounts statistics and encourage the use of financial accounts for analytical purposes. Financial accounts give us a comprehensive picture of the financial linkages within the economy and with the rest of the world and can help us analyse the past, monitor the present and foresee the future.

With this paper I wanted to demonstrate, using an example from the latest economic crisis, the usefulness of the financial accounts of Slovenia for financial analysis and the management of economic policy. As is evident from the paper, the economic crisis is visible in all presented sectors.

The financial assets of non-financial corporations stood at EUR 45,679 million (56% to non-financial companies and 23% to the rest of the world) and liabilities accounted for EUR 87,320 million (30% to non-financial companies, 25% to banks and 17% to the rest of the world) at the end of 2009. Over the observation period non-financial companies invested within sectors (50%) and in the rest of the world (33%), but were financed by banks (47%), by their own sector (28%) and by the rest of the world (16%). The deficit of non-financial corporations increased by EUR 14,856 million over the observation period, to EUR 41,641 million at the end of 2009. The analysis showed that the financial situation of non-financial corporations deteriorated because of the increased borrowing and lower financial assets.

The financial assets of banks stood at EUR 53,063 million (42% to non-financial companies, 19% to the rest of the world and 16% to households) and liabilities accounted for EUR 51,534 million (35% to the rest of the world and 28% to households) at the end of 2009. Over the observation period banks invested in non-financial corporations (44%), in the rest of the world (27%) and in households (17%) and reduced their investments in the central bank, but were financed by the rest of the world (43%) and by households (16%). The rest of the world represented a major source of financing for banks in the period from 2004 to 2009 (an increase of EUR 9,708 million), but in 2008 the impact of the financial crisis was already evident, as funding from abroad reached only 32% of funding in 2007. The share of external liabilities in all liabilities of banks declined from 41% at the end of 2007 to 35% at the end of
2009. Banks began to deleverage in the rest of the world in the third quarter of 2008. The deleveraging of banks in the rest of the world has been partly replaced by government, central bank and intrasectoral funding.

The financial assets of non-financial corporations stood at EUR 39,274 million (36% to banks and 28% to non-financial companies) and liabilities accounted for EUR 11,662 million (72% to banks) at the end of 2009. Over the observation period households invested in the rest of the world (36%) and in banks (36%), but were financed by banks (80%). Households recorded a surplus of financial assets over liabilities during the observation period, which means that households continue to fund other sectors. The largest increase in the surplus was recorded in 2007 (by EUR 3,433 million), but there was a decline in 2008 for the first time (by EUR 1,661 million, mainly as a result of lower financial assets due to a fall in the prices of securities), followed by an increase (by EUR 2,335 million) in 2009. Analysis showed that the worse financial situation of households in Slovenia was a result of lower disposable financial assets; however, households’ indebtedness in Slovenia was lower than in the euro area.
Appendix

Classification of sectors and subsectors
The Slovenian economy (S.1) consists of resident institutional units.
Non-financial corporations (S.11) are market producers whose principal activity is the production of goods and non-financial services.
The central bank (S.121) is the Bank of Slovenia.
Other monetary financial institutions (S.122) comprise commercial banks, savings banks and money market funds.
Other financial intermediaries except insurance corporations and pension funds (S.123) comprise:
- mutual funds;
- investment companies (ICs);
- management companies;
- corporations engaged in financial leasing;
- corporations engaged in factoring (trading in claims).
Financial auxiliaries (S.124) include:
- brokerage houses;
- exchange offices;
- institutions providing financial market infrastructure services (e.g. KDD – the Central Securities Clearing Corporation);
- stock exchanges (Ljubljana Stock Exchange).
Insurance corporations and pension funds (S.125) comprise:
- insurance and reinsurance corporations;
- mutual pension funds;
- pension companies.
Central government (S.1311) includes:
- direct state budget spending units (non-governmental, governmental and judicial spending units);
- indirect budget spending units (public institutes and agencies) at state level;
- public funds at state level;
- the Slovene Compensation Fund (SOD).
Local government (S.1313) comprises:
- municipalities;
- regional authorities;
- public funds at municipal level;
- indirect budget spending units at local level.
Social security funds (S.1314) comprise:

- the Health Insurance Institute (ZZZS);
- the Pension and Disability Insurance Institute (ZPIZ);
- Kapitalska Družba (pension fund manager; KAD).

The household sector (S.14) consists of private individuals and sole traders.

Non-profit institutions serving households (S.15) include societies, political parties, trade unions, clubs, associations, religious communities and humanitarian organisations.

The rest of the world (S.2) consists of non-resident units, and comprises S.21 (EU) and S.22 (Others outside the EU). The EU comprises EU Member States, divided into the countries of the EMU (S.2111) and other EU members (S.2112).

**Classification of financial instruments**

Category F.1 Monetary gold and SDRs comprises:

- Monetary gold, which is gold held as a component of international reserves by monetary authorities or by others subject to the effective control of the authorities;
- SDRs (Special Drawing Rights), which are international reserve assets created by the International Monetary Fund and allocated to its members to supplement existing reserve assets.

As a rule F.1 is a financial asset of the central bank (S.121). A feature of F.1 is that no institutional unit or sector discloses a liability deriving from the instrument. Only in transactions is the counterpart item disclosed on the side of financial assets of the rest of the world (S.2) in the same amount as it is disclosed by the central bank (S.121), but with a negative sign.

Category F.2 Currency and deposits consists of three subcategories of financial instruments:

- Subcategory F.21 Currency consists of notes and coins that are commonly used to make payments, and comprises notes and coins in circulation issued by resident monetary authorities and notes and coins in circulation issued by non-resident monetary authorities held by residents. All sectors may hold F.21 as a financial asset. F.21 represents a liability of the unit that issued it (generally the central bank).
- Subcategory F.22 Transferable deposits consists of sight deposits in domestic or foreign currency. Transferable deposits can be converted into currency or transferred by cheque, banker’s order, debit entry or the like, without any kind of significant restriction or penalty. F.22 also includes deposits between monetary financial institutions (such as deposits that other monetary financial institutions hold with the central bank to satisfy compulsory reserve requirements). All sectors may hold F.22 as a financial asset. Liabilities deriving from F.22 are disclosed as a rule by monetary financial institutions (S.121 and S.122) and by the rest of the world (S.2).
- Subcategory F.29 Other deposits consists of deposits that cannot be used to make payments at any time and are not convertible into currency or transferable deposits without any kind of significant restriction or penalty. Other deposits comprise:
  - fixed-term deposits;
  - savings deposits;
  - certificates of deposit that are non-negotiable, or whose negotiability, while theoretically possible, is very limited;
– repo transactions (repurchase agreements) that are liabilities of monetary financial institutions;
– repayable margin payments related to financial derivatives that are liabilities of monetary financial institutions;
– deposits resulting from a savings scheme or contract;
– evidence of deposits issued by savings and loan associations, building societies, credit unions and the like;
– claims against and liabilities to the International Monetary Fund;
– other deposits not included in subcategory F.22.

All sectors may hold F.29 as a financial asset. Liabilities deriving from F.29 are disclosed as a rule by monetary financial institutions (S.121 and S.122) and by the rest of the world (S.2).

Category F.3 Securities other than shares consists of:

- F.33 Securities other than shares (debt securities), excluding financial derivatives, and is further subdivided into:
  - F.331 Short-term debt securities, which are securities with an original maturity of one year or less, and comprise:
    - treasury bills and other short-term securities issued by the general government;
    - short-term bills of exchange (own bills, commodity bills, drawn bills, drafts);
    - bills;
    - commercial paper;
    - negotiable certificates of deposit;
    - bankers’ acceptances.
  - F.332 Long-term debt securities, which are securities with an original maturity of more than one year, and comprise:
    - bonds;
    - floating rate notes (FRNs);
    - other debt securities with an original maturity of more than one year.

- F.34 Financial derivatives comprises:
  - options, tradable and over-the-counter (OTC);
  - standardised futures, provided that they have a market value because they are tradable or can be offset;
  - swaps, provided that they have a market value because they are tradable or can be offset;
  - forward rate agreements, provided that they have a market value because they are tradable or can be offset;
  - warrants. Warrants are a special form of tradable option.

All sectors may hold F.3 as a financial asset. F.3 is generally liabilities of non-financial corporations (S.11), financial corporations (S.12), general government (S.13) and the rest of the world (S.2).
Category F.4 is divided into two subcategories:

- **F.41 Short-term loans** consists of loans with an original maturity of one year or less;
- **F.42 Long-term loans** consist of loans with an original maturity of more than one year.

Category F.4 Loans consists of all types of loans created when creditors lend funds to debtors, either directly or through brokers, that are either evidenced by non-negotiable documents or not evidenced by documents. The initiative concerning a loan normally lies with the borrower. F.4 also includes loans to finance trade credits, leasing, repurchase agreements, and repayable margin payments related to financial derivatives when these agreements and payments are liabilities of corporations that are not monetary financial institutions. F.4 does not include trade credits or advances. All sectors may hold F.4 as a financial asset and liability.

Category F.5 Shares and other equity comprises:

- **F.51 Shares and other equity, excluding mutual fund shares**, which comprise:
  - F.511 Quoted shares, namely equity securities quoted on the domestic market or a foreign market;
  - F.512 Unquoted shares, namely equity securities not quoted on the domestic market or a foreign market;
  - F.513 Other equity, namely equity that is not in the form of shares.
- **F.52 Mutual fund shares**, which comprise:
  - shares in investment companies;
  - investment coupons registered to one or more units of a mutual fund;
  - mutual pension fund units.

All sectors may hold F.51 as a financial asset. F.51 is generally liabilities of non-financial corporations (S.11), financial corporations (S.12) and the rest of the world (S.2). Exceptionally, individual units of general government (S.13) may hold a liability in F.51.

All sectors may hold F.52 as a financial asset. Money market funds (S.122), investment companies and mutual funds (S.123), mutual pension funds (S.125) and the rest of the world (S.2) may hold liabilities in F.52.

Category F.6 Insurance technical reserves comprises the insurance technical reserves of insurance corporations and pension funds against policyholders and beneficiaries, and is divided into two basic subcategories of financial instruments:

- **F.61 Net equity of households in life insurance reserves and in pension funds reserves**, which is further subdivided into:
  - F.611 Net equity of households in life insurance reserves, comprising:
    - net life insurance provisions;
    - net provisions for life insurance policies where the investment risk is borne by the policyholder;
  - F.612 Net equity of households in pension funds reserves, which consists of provisions deriving from pensions.
- **F.62 Prepayments of insurance premiums and reserves for outstanding claims**, which consists of:
  - net prepayments of insurance premiums;
  - net provisions for bonuses, rebates and cancellations;
– net reserves for outstanding claims;
– equalisation reserves;
– other net insurance technical reserves.

F.611 may be financial assets of households (S.14) as policyholders, and liabilities of insurance corporations (S.125).

F.612 may be financial assets of households (S.14) as policyholders, and is generally a liability of pension funds (S.125).

F.62 may be financial assets of all sectors as policyholders (prepayments of insurance premiums) or beneficiaries (reserves for outstanding claims), and is generally a liability of insurance corporations and pension funds (S.125).

Those who are obliged to report and who create insurance technical reserves report the net technical reserves for the instrument of insurance technical reserves as a liability of the reporter, and allocate them as liabilities to individual sectors/subsectors as policyholders or beneficiaries (e.g. liabilities to households, liabilities to non-financial corporations).

Category F.7 Other accounts receivable/payable consists of:

- F.71 Trade credits and advances, which consists of financial claims or liabilities arising from the direct extension of credit by suppliers and buyers for goods and services transactions, and advance payments for work that is in progress or to be undertaken and associated with such transactions. F.71 includes all as-yet-unpaid claims and liabilities deriving from goods and services. F.71 may be financial assets or liabilities for all sectors;

- F.79 Other accounts receivable/payable, excluding trade credits and advances consists of all other claims and liabilities arising from timing differences between transactions and payments made in respect of taxes, social contributions, wages, rents, dividends, interest and transactions in financial assets on the secondary market. F.79 may be financial assets or liabilities for all sectors.

As a rule accrued interest is included in the instrument to which the interest relates (e.g. interest on deposits is included in F.2, interest on loans is included in F.4, and interest on securities is included in F.3). However, should it be impossible to include the interest in the relevant instrument, it is disclosed in F.79.
