BIS statistics on international debt issuance\textsuperscript{1}

Bruno Tissot,

Bank for International Settlements

\textsuperscript{1} This presentation was prepared for the meeting. The views expressed are those of the authors and do not necessarily reflect the views of the BIS, the IFC or the central banks and other institutions represented at the meeting.
BIS statistics on international debt issuance

Bruno Tissot
Head of Statistics and Research Support, BIS
Head of the Secretariat of the Irving Fisher Committee on Central Bank Statistics (IFC)

IFC-Central Bank of Armenia Workshop on External Sector Statistics, 11-12 June 2018

The views expressed are those of the author and do not necessarily reflect those of the BIS or the IFC.
Overview

1. Importance of the global bond market
2. BIS securities statistics
3. International security: definition & identification
4. Benefits of a security-by-security database
5. Conclusion – Overall set of BIS statistics to assess external credit
1. Importance of international debt market – Policy issues

- **Four main factors of differentiation between domestic and international markets:**
  - **Currency:** though growing local currency issuance offshore
  - **Primary market (ISIN)**
  - **Secondary market** (exchanges, though importance of OTC transactions)
  - **Governing law** (risks associated with policy measures)

  ❖ *Historically, bonds registered & traded outside the country used to be governed by foreign law and denominated in foreign currency*

  ❖ *Bonds issued in local market typically tended to be issued in local currency under the local law*
1. Importance of international debt market - Size

Size of the global bond market estimated by combining the various BIS datasets

Global debt securities markets by market of issue

Amounts outstanding, in trillions of US dollars

DDS = domestic debt securities; IDS = international debt securities; TDS = total debt securities; FC = financial corporations.

1 Sample of countries varies across breakdowns shown. For countries that do not report TDS, data are estimated by the BIS as DDS plus IDS. For countries that do not report either TDS or DDS, data are estimated by the BIS as IDS. 2 At quarter-end. Amounts denominated in currencies other than the US dollar are converted to US dollars at the exchange rate prevailing on the reference date.

Sources: Dealogic; Euroclear; Thomson Reuters; Xtrakter Ltd.; national data; BIS debt securities statistics; BIS calculations.
2. BIS Statistics on Debt Securities: Dissemination

Debt securities statistics

Debt securities statistics can be browsed using the BIS Statistics Explorer and BIS Statistics Warehouse, as well as downloaded in a single CSV file.

Contact
2. BIS Statistics on Debt Securities: 3 datasets

- **National data** (aggregates reported to BIS):
  - **Total** debt securities (TDS): 43 countries, mostly industrialised
  - **Domestic** debt securities (DDS): 33 countries, mostly EMEs
  - BIS disseminating role - G20 Data Gaps Initiative

- **International** debt securities (IDS, granular)
  - BIS “own” security-by-security dataset
2. BIS Statistics on Debt Securities: Challenges

- **Different reporting**
  - 59 countries report DDS or TDS
  - International data presented by the BIS for >140 countries
  - Potential overlap between IDS and DDS

- **Various reporting practices**

- Example: **valuation**
  - IDS face value
  - DDS / TDS nominal or face value or market value
3. What is an international debt security? Previous definition

- **“Traditional” definition of international issue**: targeted at international investors
  - Securities issued in a **foreign** market
  - Or: securities issued in a **local** market, if denominated in a foreign currency or underwritten by one foreign bank

- **Domestic issue**: in local currency, placed with local investors
3. What is an international debt security? Challenges with the old definition

- Limited **comparability** across countries

- **Underestimated foreign holdings** of securities issued by residents

- **Overestimated bonds targeted at international investors** but purchased by residents
3. What is an international debt security? Current definition

- Current (new) definition: an international security is **issued in a foreign market** i.e. outside the market where the borrower resides.

- Focus on the **primary market, based on issuer residence**
  - Domestic market: where residents issue
  - International market: where non-residents issue
3. What is an international debt security? Current definition

- In practice: compare **3 characteristics** of each security with the residence of its issuer
  - registration domain
  - listing place
  - governing law

**IDS: if at least 1 characteristic has a different location compared to the issuer’s residence**
3. What is an international debt security? Remaining challenges

- For about **half of the IDS** all the 3 characteristics allow to identify a foreign market (i.e., the location is different from the residence of the issuer)
  - For one third at least one characteristic is different
  - If inconclusive, the security is classified as an IDS

- Significant degree of **uncertainty**
  - across data sources
  - within datasets
4. Analytical value of BIS’s international security-by-security dataset

- Multiple **indicators**: gross/net issues, repayments, amounts
- Multiple **breakdowns**: instrument, currency, maturity bands, interest rate, rating, guarantees
- Very flexible, allows to address various **policy questions**
  - Currency mismatches
  - Issuance both by **residence and nationality** (defined as the residency of the controlling parent)
  - Since 2015, **sector classification** based on the activity of the issuer’s parent entity
4. Example of analysis (i): Who issues what?

Net issuance of international debt securities
By issuer sector and currency of denomination, in billions of US dollars

$ is the major issuance currency, but there are others

Further information is available at www.bis.org/statistics/secstats.htm.

Sources: Dealogic; Euroclear; Thomson Reuters; Xtrakter Ltd; BIS debt securities statistics.
4. Example of analysis (ii): Who issues for whom?

Large activity in offshore centres by foreign affiliates

International debt securities issued by financial and non-financial corporations

Net issuance by region, in billions of US dollars

Further information is available at www.bis.org/statistics/secstats.htm.

1 Excluding general government.  
2 For a list of countries in each region, see Table C1 (http://stats.bis.org/statx/srs/table/c1).

Sources: Dealogic; Euroclear; Thomson Reuters; Xtrakter Ltd; BIS debt securities statistics.
4. Example of analysis (iii): Where are issuers issuing?

- **Debt issuance:** the 2\textsuperscript{nd} phase of global liquidity
- **Issuance by (non-resident) affiliates can be large**

For definitions and sources, see [www.bis.org/statistics/qli.htm](http://www.bis.org/statistics/qli.htm). Breaks in series occur in the period in which data on LLFX become available for the respective country: for Brazil, Q4 2002; for China, Q1 2010; for Turkey, Q4 2000.

1 Offshore bond issuance is defined as the outstanding US dollar-denominated bonds issued offshore (ie outside the country listed in the panel title) by non-banks with the nationality listed in the panel title.

5. Conclusion – Overall set of BIS external sector statistics

- **Debt securities** are one part of BIS’s statistical offering

- **International Banking Statistics**
  - Balance sheets of internationally active banks
  - Geographical & currency composition of assets & liabilities
  - Locational statistics: include intragroup business (differs from consolidated statistics)

- **Long series on credit to the private non-financial sector**
  - 44 economies, advanced and emerging
  - Provided by domestic banks, other sectors of the economy and non-residents
  - All financial instruments eg credit covers loans but also debt securities
5. Conclusion – Overall set of BIS external sector statistics

- Three indicators of **global liquidity** (ie "the ease of financing in global financial markets")
  - Banks’ international claims: cross-border claims denominated in all currencies plus local claims in foreign currencies
  - Banks’ total claims on the private non-financial sector
  - Total credit by currency of denomination, extended by all (foreign and domestic) lenders:
    - loans extended by banks
    - purchases of debt securities (proxied by issues of debt securities)
5. GLIs indicators to assess spillovers of domestic policies

US dollar-denominated credit to non-banks outside the United States\(^1\)

Amounts outstanding, in trillions of US dollars

- \(\text{Bank loans to non-banks}\)\(^2\)

Further information on the BIS global liquidity indicators is available at [www.bis.org/statistics/about_gli_stats.htm](http://www.bis.org/statistics/about_gli_stats.htm).

\(^1\) Non-banks comprise non-bank financial entities, non-financial corporations, governments, households and international organisations.

\(^2\) Loans by LBS-reporting banks to non-bank borrowers, including non-bank financial entities, comprise cross-border plus local loans.
