## Communication on central bank statistics: unlocking the next level

Luís de Carvalho Campos, Lígia Maria Nunes, Mafalda Sousa Trincão, Bruno Tissot<sup>1</sup>

### Executive summary

Many central banks have recently taken important steps to **strengthen the communication of their statistics**, aiming at increasing their outreach to a broader audience and enhancing their value to better support information users.

These initiatives have underlined **three main points**. First, statistical communication is a key element for maximising the value of the data produced by central banks. Second, it is also an important ingredient supporting the effectiveness of their policies, with due consideration for the fact that data collected for statistical purposes should be protected from other needs. And third, communication effectiveness depends crucially on the degree of statistical literacy in the public; central banks can play an important role in addressing this point, for instance by making statistical content easy to understand, practising plain language, avoiding over-simplification and motivating the diverse user groups to engage with statistical information (data and metadata) and expand their knowledge.

Despite ongoing efforts, **the communication of statistics remains a constant challenge**, reflecting in particular the difficulties posed by new information sources, the increasing need for granular insights and the competition of alternative, sometimes poor-quality data. Fortunately, central banks appear well positioned, building on well-established credibility, visibility and trusted independence. They are also making substantial progress, especially in establishing a dedicated statistical communication function, identifying and selecting specific audience targets, crafting tailored content, using various (traditional and new) dissemination channels and leveraging technical innovation. A key objective is to foster user engagement with, and understanding of, central bank statistics.

<sup>1</sup> Respectively, Head of Digital Channels, Communication Department, Banco de Portugal ([lcampos@bportugal.pt](mailto:lcampos@bportugal.pt)); Head of the Communication and Planning Division, Statistics Department, Banco de Portugal ([lmnunes@bportugal.pt](mailto:lmnunes@bportugal.pt)); former Economist, Statistics Department, Banco de Portugal ([mstrincao@bportugal.pt](mailto:mstrincao@bportugal.pt)); and Head of Statistics and Research Support, Bank for International Settlements (BIS), and Head of the Secretariat of the Irving Fischer Committee on Central Bank Statistics (IFC) ([Bruno.Tissot@bis.org](mailto:Bruno.Tissot@bis.org)).

The views expressed here are those of the authors and do not necessarily reflect those of Banco de Portugal, the BIS, the IFC or any of the institutions represented at the event.

We thank Christian Beslmeisl, Bilyana Bogdanova, Elizabeth Holmquist, Robert Kirchner, Edward Lambe, Michael Machuene Manamela, Ko Nakayama, Alberto Naudon and Luis Teles Dias for supporting comments and helpful suggestions.

First, a statistical communication function is typically set up to **address both internal and external users**. Success will often depend on defining clear priorities and objectives and on ensuring good cooperation with subject matter experts as well as with the main communication department of the central bank. Moreover, there is merit in following a structured approach to designing a comprehensive framework comprising all the various building blocks that constitute the “communication ecosystem” – eg the related information sources, audiences, channels and required multidisciplinary skills.

Second, **a one-size-fits-all approach has clear limitations**. To be effective, communication should reach out to and engage with different groups, consider their distinct needs and be tailored to their various levels of sophistication and knowledge. Central bank statisticians are indeed already following different approaches when communicating statistical information, depending on the specific user groups considered (such as the general public, researchers, students, journalists).

Moreover, central banks are also **developing new communication channels** in order to reach out to the broadest possible audience. This calls for making the most of the wealth of data they have available, including granular data, and for using all media opportunities, especially social media.

Lastly, central banks are **leveraging innovation** to enhance their statistical dissemination methods and address the most pressing challenges. For instance, they are developing single “open source” data portals to strengthen their communication, by making data more accessible and enhancing users’ experience. They are also exploring new ways to share very granular information without compromising confidentiality. And they are mobilising techniques based on artificial intelligence (AI) to support a wide range of tasks, from identifying user types to offering customised solutions that are tailored to specific user needs and degrees of literacy. In particular, the recent progress observed in the field of natural language processing (NLP) and large language models (LLMs) is providing important and promising new opportunities to strengthen central banks’ statistical communication.

## 1. Introduction

The statistical teams of many **central banks have recently taken important steps to strengthen their communication function**. The various actions involved include identifying and targeting specific user groups through tailored content, examining and selecting relevant dissemination channels, adopting the relevant technology and setting up specific teams with diverse skill sets to be responsible for this function.

These initiatives have taken place **in the context of a greater focus on data governance** to ensure the quality of the production of official statistics and also to enhance their use. Communication is an essential element to consider in this context, since a key objective is to ensure that the data produced are fit for purpose to address user needs and that their public value is maximised (IFC (2021)). In particular, and in line with the Fundamental Principles of Official Statistics (UN (2013)), one should strive for clarity and transparency to ensure *“trust of the public in the integrity of official*

*statistical systems and confidence in statistics*".<sup>2</sup> To this end, statistical content has to be "compiled and made available on an impartial basis (...) to honour citizens' entitlement to public information".

### Three main issues related to statistical communication

**The above considerations raise three main issues:** (i) statistical communication is a key element for maximising the value of the data produced by central banks; (ii) it is also an important ingredient supporting the effectiveness of their policies; and (iii) its effectiveness depends crucially on internal and public data literacy.

**First, regarding data production, communication is a key dimension to consider**, not least to promote the value of the statistics compiled by official statisticians (Andrei et al (2014), UNECE (2018)).<sup>3</sup> It is also essential for bridging the gap between statistical producers and their clients, as emphasised by Ana Paula Serra (Banco de Portugal). This is particularly relevant for central banks, which in many countries have the responsibility to produce statistics in certain subject areas, such as monetary and financial statistics, balance of payments statistics and financial accounts. Their statistical departments can therefore play a crucial role in disseminating economic and financial information to the public. They have in recent years taken various initiatives to develop a communication strategy, producing specific content tailored to pre-defined audiences and taking advantage of a diversified range of channels.<sup>4</sup>

**The second issue is the contribution of statistical communication to policymaking** (Bartsch (2011)). Besides being important producers of official statistics, central banks are also policy institutions that have an interest in sharing, in the most clear and understandable way, a comprehensive picture of the analyses supporting their decisions, including the degree of uncertainty associated with the data and the techniques used (Kapetanios et al (2021)). Communication has indeed become a central element of central banks' public mandates (Blinder et al (2008), Draghi (2014), Weidmann (2018)), in a context characterised by the growing importance of evidence-based policies (Buch (2019)) and the powerful role played by numbers in this regard (Dilnot (2012)).

However, and as stressed in the Fundamental Principles, statistics should be presented "*according to strictly professional considerations, including scientific principles and professional ethics*". This **calls for strong professional independence**, not least to ensure that the data used to support policies are relevant, science-based and free of purposeful political bias (Habermann and Louis (2020)). In fact, one important factor supporting the sheer value of official statistics, relative to any other statistics or data, is that they come from a "*trusted information source that is independent from any policy or other interests*"; this is a key "*difference induced by the Fundamental Principles*" (UNECE (2018)). Hence, a major challenge is how to secure

<sup>2</sup> One telling example is the code of practice for official statistics in the United Kingdom, which explicitly aims to ensure the publication and communication of statistics "*in a way that inspires public confidence*" (UK Office for Statistics Regulation (2022)).

<sup>3</sup> Giovannini (2008) argues that communication is "a key function that can determine the success or the failure of an official data provider".

<sup>4</sup> In line with international recommendations regarding the communication strategy of statistical organisations (see UNECE (2021)).

the professional independence of the statistical function from policy actions to avoid any loss of trust and perceptions of potential conflicts of interest. While national statistical offices (NSOs) in many countries are independent of government, this issue may be particularly relevant for statisticians in central banks – as well as in administrative statistical services participating in the national statistical system, such as state ministries. It is therefore crucial to differentiate the collection of data for statistical purposes from their use for policy purposes.<sup>5</sup>

From this perspective, it is essential to reassure the public that **data collected for statistical purposes are duly safeguarded** and follow high-quality standards, not least to protect confidentiality (Križman and Tissot (2022)).<sup>6</sup> Clarifying this point, the European Central Bank (ECB) states, for example, that strict rules are followed to produce statistics that "*are accurate, consistent, timely, and produced in line with international standards without any outside interferences*" (ECB (2016)).<sup>7</sup> In addition, the ECB has been surveying European citizens for their attitudes and opinions on a number of key communication aspects, such as the level of public trust (ECB (2022)).

**The third issue relates to the target of statistical communication, as its effectiveness depends crucially on the level of economic literacy in the public** (see Rahman (2018) for an analysis in the central banking context). Communication is not just about publishing numbers; it is also about putting them into perspective, as argued by Pablo García Silva (Irving Fisher Committee on Central Bank Statistics). For instance, analysing economic indicators such as gross domestic product (GDP) calls for an understanding of the way the statistics have been compiled as well as the complex factors that drive them and their real-world implications – underscoring the importance of providing information about the data themselves (metadata). Moreover, a key duty for official statisticians is to facilitate "*a correct interpretation of the data*", as stated in the Fundamental Principles. Reflecting these points, statisticians have been developing various initiatives to present information in a more straightforward manner and promote transparency, especially by providing context to the numbers published (UNECE (2013)). They have also recognised that publishing raw numbers is not sufficient, and that more needs to be done to help analyse the statistics produced and transform them into knowledge that can appropriately support users' decisions (Drozdova (2017)). This calls for adopting a user-friendly data ecosystem that ensures the disseminated statistics are well understood by their

<sup>5</sup> Central banks' statistical activity is often a by-product of their supervisory functions. While this role is typically clarified in the law of the central bank, an important point is to provide assurance that the official statistics for which the central bank is responsible are subject to provisions equivalent to those contained in the national statistical law or the UN Fundamental Principles (UNSD (2022)).

Nevertheless, central banks can be well placed to provide trusted statistical information, because they are independent and because the production and communication of statistics are important elements of their public accountability (Ittner and Schubert (2011)). In addition, various elements can contribute in practice to secure the professional independence of their statistical function, such as the public announcement of statistical release dates, the adequate adaptation of the statistical output to serve journalistic needs, the focus on communicating data and data analysis without drawing policy conclusions, etc (Seltzer (1994)).

<sup>6</sup> For example, the IMF Data Quality Assessment Framework states that "decisions about dissemination (...) are informed solely by statistical considerations" (IMF (2012)). Similarly, the *United Nations National Quality Assurance Frameworks Manual for Official Statistics* has been developed with the ultimate goal of ensuring trust and the quality of official statistics across the entire national statistical system (UN (2019)).

<sup>7</sup> The ECB Statistics Quality Framework contains the key principles and a practical framework for the work of its staff in the area of statistics (ECB (2008)).

consumers. As an illustration, and as argued by Qiu (Federal Home Loan Bank of Atlanta), the following actions can be useful to facilitate the use of statistics by the general public:

- **Make information easy to understand.** While statistics are based on precise and complex concepts, they have to be made accessible and comprehensible for general users. This calls for communicating in a non-technical manner, explaining and providing context to the disseminated numbers (eg by developing narratives or visualisations) and addressing interpretation errors. Moreover, more is not necessarily always better, and there is value in focusing on communicating clear and useful content and avoiding excessive noise in the statistics (Dale et al (2008)).
- **Practise plain statistical language.** Central banks have to "speak the language of the public" (Ittner and Schubert (2011)). Certainly, defining what is "plain language" is subjective, as it depends on the profile of the users. This means that statisticians should analyse the reactions of specific target groups and constantly check whether they can explain something more simply (but without compromising accuracy).
- **Avoid over-simplification.** One important challenge is that over-simplification can lead to misperceptions if the audience is not aware of or does not realise the assumptions made. Central banks should therefore find the right balance when facilitating the interpretation of the data while preserving the accuracy of the content being disseminated. A feasible solution is to communicate through well-identified, knowledgeable intermediaries like professors and financial journalists. Another is to engage with users in an interactive way, so as to receive feedback on how the communicated statistical content is being perceived and refine it if necessary. And a third aspect is to differentiate among user groups, for instance by identifying the more advanced ones who could benefit from more sophisticated analyses.
- **Motivate people to learn how to use statistics.** While many consumers of data are not interested in understanding the related methodology, it is essential that they are aware of how to correctly use this information. In a way, the situation is akin to drivers willing to know how to drive safely without being drawn into the technical details of their cars.

### Addressing the new challenges posed by the information revolution

Despite ongoing efforts, **the dissemination of statistical information remains a constant challenge**. This reflects in particular the difficulties posed by new data sources, people's declining attention to traditional media and the need to secure (restore?) public confidence in a world increasingly marked by "alternative facts" and "fake news". For instance, greater public attention to poor quality and potentially misleading data poses the risk of driving good statistics out of policy debates (Cœuré (2017)). In this context, central bank communication has to continuously adapt to the changing information landscape and "cut through" to the wider public (Lagarde (2023)).

To shed light on these aspects, the Irving Fisher Committee on Central Bank Statistics (IFC) of the Bank for International Settlements (BIS) has taken **several initiatives in recent years to review the evolution of central banks' statistical**

**communication and identify actions for improvement.** For instance, a recent survey organised among IFC members showed that almost all of them are proactively developing communication initiatives as a complement to their statistical production work (IFC (2023a)). While central banks are not alone in this field, they appear well positioned, not least in terms of credibility, visibility and trusted independence. But they are also perceived to be somewhat outdated when disseminating statistics, especially with respect to the use of advanced visualisation tools to communicate statistical content effectively.

In addition, the **IFC co-organised with the Banco de Portugal its first conference dedicated to the topic of “Communication on central bank statistics: unlocking the next level”** in September 2022. One goal was to share experience on how to start a statistical communication function in terms of targets, channels and content and to create the team in charge of related tasks. Another objective was to reflect on reaching and engaging with different target groups, with a focus on the various channels available. This event was an opportunity to take stock of the new perspectives facing the communication of central bank statistics – especially to enhance their promotion, address users’ evolving needs and develop statistical literacy among the diverse stakeholders involved – as well as the challenges that remain. About 30 institutions from 25 jurisdictions were represented at the event. Their contributions, as referred to in this overview and included in this *IFC Bulletin*, discussed how to set up a statistical communication function serving both internal and external users (Section 2), identify adequate external audience targets (Section 3) and dissemination channels (Section 4), and make the best use of the opportunities provided by technical innovation (Section 5).

## 2. Unlocking the communication function

### The nature of statistical communication

A concrete issue for central banks establishing a statistical communication function is how to start. This will first depend on **the preferred form of dissemination envisaged**, as central banks can typically communicate statistical content in both an active and a passive way, depending in particular on the profile of data users in the specific countries considered. A passive approach will relate to the simple dispatching of regular and dedicated publications on the website (this is often referred to as “one-way” dissemination). In contrast, active communication aims to be “two-way”, by carefully taking into consideration user feedback. It is usually achieved by generating press releases, preparing ad hoc briefings, posting on social media and responding to queries. In practice, these approaches are deemed equally important and complementary by central banks. The setup of a communication function should thus address the specifics related to both aspects.

A second important consideration is the need to adopt a data strategy that addresses **internal as well as external recipients** of the information being disseminated, as highlighted by the example of the Bank of Israel (Graph 1). Regarding internal communication, a main objective is to maximise the value added of data by facilitating access to them within the Bank. To this end, statistics are disseminated via a dedicated internal portal that provides dashboards, tables, charts, etc to users. Turning to external communication, the goal is to be a primary source of

financial statistical information for the public. This calls for focusing on three critical aspects: accessibility, flexibility and transparency.

A third important point is that the nature of statistical communication pursued by central banks will often **depend on specific circumstances**, for instance in a crisis (Ittner and Schubert (2011)). One telling example was during the Covid-19 pandemic, when many institutions faced "statistical darkness" and realised the importance of strengthening their communication on the state of the economy (de Beer and Tissot (2021)). To monitor the situation more effectively, the Bank of Israel decided to centralise statistics in a unified location, strengthen the dissemination of more timely and frequent indicators and make use of new business intelligence tools (IFC (2019)). Similarly, Banco de Portugal decided to develop a dedicated web page to present the most pertinent statistical data available at the time of the pandemic.

## Organisational aspects

**The actual organisation of a statistical communication function can take several forms.** A number of central banks have decided to create a specific unit in charge of this task, often located in statistical departments. One important benefit is to allow a close involvement of subject matter experts in communication initiatives. However, setting up a dedicated function separated from the main unit in charge of corporate communications can have notable drawbacks (eg resource impact, potential duplication of skills and reduced synergies). It can also lead to the development of communication silos and raise reputational risk if the overall activities of the central bank are perceived as uncoordinated. Reflecting this trade-off, the approach followed by central banks is often hybrid, with the statistical communication function typically shared between the two departments in charge of statistics and corporate communication.

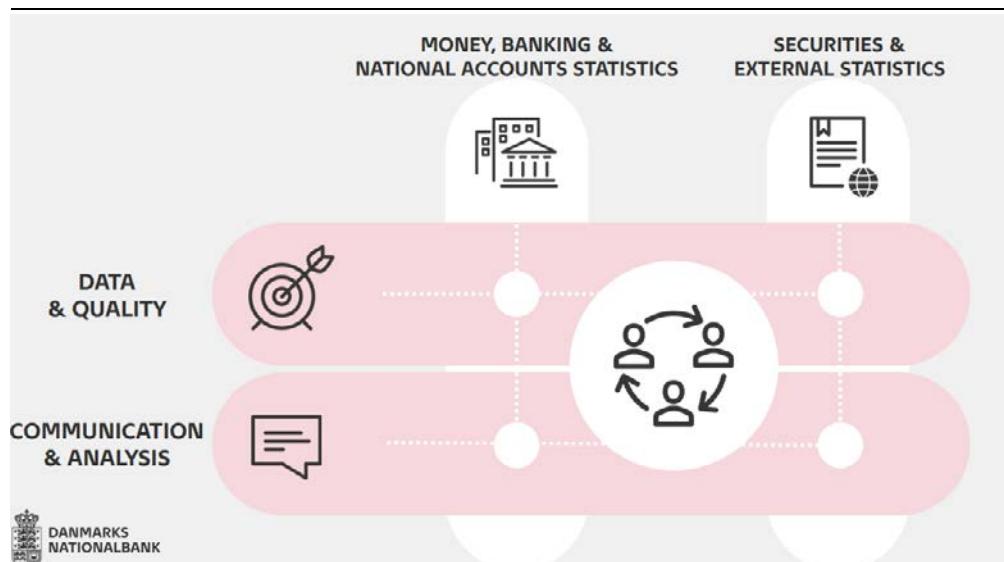

Whatever the organisational set up, how should one proceed in practice to organise statistical communication activities? Based on its experience, the Danmarks Nationalbank has identified **the following "keys" to consider**:

- **Prioritise communication.** A key starting point is to recognise that producing statistics is not sufficient if their value is unknown. This calls for a cultural shift within the institution and a willingness to allocate more resources to the dissemination of statistical information, hire staff with specific competencies and ensure that everyone understands the importance of communication.

- **Set up a visible function in charge of statistical communication.** Each of the divisions producing statistics should not be left alone to manage the dissemination of their data. There is merit in establishing a common unit in charge, for instance, of responding to users' incoming inquiries and organising communication activities.
- **Favour internal mobility.** Facilitating the transition of statistical experts to the statistical communication function is essential to promote synergies and staff development. This requires adequate training, in particular in written and visual communication.
- **Define clear communication objectives.** Statistics departments should carefully analyse user feedback to identify information needs and adapt their communication accordingly. This also calls for flexibly adjusting to an environment often characterised by uncertain and changing customer preferences.
- Develop a matrix organisational structure to **ensure that subject matter experts are working together with the communication function** (Graph 2). The key is that staff in specific statistics areas (eg monetary statistics, external sector statistics) are associated with the various communication initiatives, for instance when working on the presentation of the data in a user-friendly way. Collaboration should also involve other internal stakeholders, such as economists in research and policy departments (especially for producing analytical content) as well as experts in the main communication unit of the central bank (which is also increasingly relying on internal data analytical capacities these days). This collaboration can be facilitated by the design of a well-defined governance framework that clarifies the various processes and responsibilities involved, for instance for the production of press releases.

A matrix organisation structure to support statistical communication

Graph 2

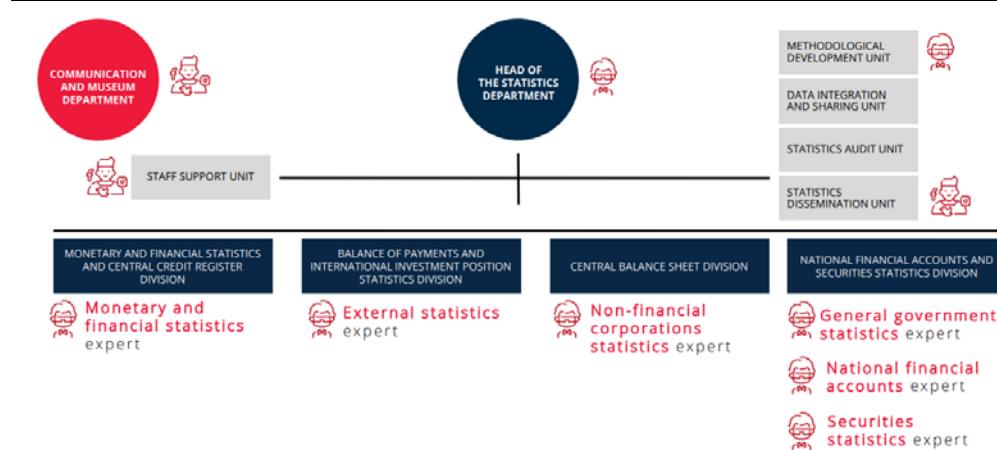

Source: R Mandsberg and L Risbjerg (2024): "Developing the statistical communication function at Danmarks Nationalbank", *IFC Bulletin*, no 60, March.

Denmark's experience described above resonates with **the situation faced by other central banks**. For instance, the statistics department of the Banco de Portugal, established a communication-focused team a few years ago. The initial intention was to recruit specific external skills (eg web design, marketing), with the view that business experts can excel in deciphering and analysing data but may be less effective in presenting and promoting them. However, this option was limited by budget constraints, and the statistics department decided to creatively harness available resources. A distinct communication unit was established by restructuring staff resources internally, supported by selected experts from each statistical division, forming the "StatsComm Team" (Graph 3). These business contact points benefited from regular training sessions, for instance on writing concise texts and leveraging social media. In parallel, a close partnership was set up with the central bank's communication department, which has been closely associated in the development of statistical communication plans and the analysis of user feedback and website traffic. Turning to the Central Bank of Iceland, it has decided to build a dedicated function comprising individuals from diverse departments and possessing varied expertise, which is responsible for formulating and executing the communication strategy.

The StatsComm Team at Banco de Portugal

Graph 3

## Designing a comprehensive framework

Central banks' experiences highlight the **importance of following a structured approach when developing a statistical communication function**. A key reason, as observed in the case of the ECB, is that a "communication ecosystem" relies on a number of complex factors, especially regarding the users, channels and skills involved. Addressing these multiple aspects can be facilitated by the design of a comprehensive framework, with four main focus points:<sup>8</sup>

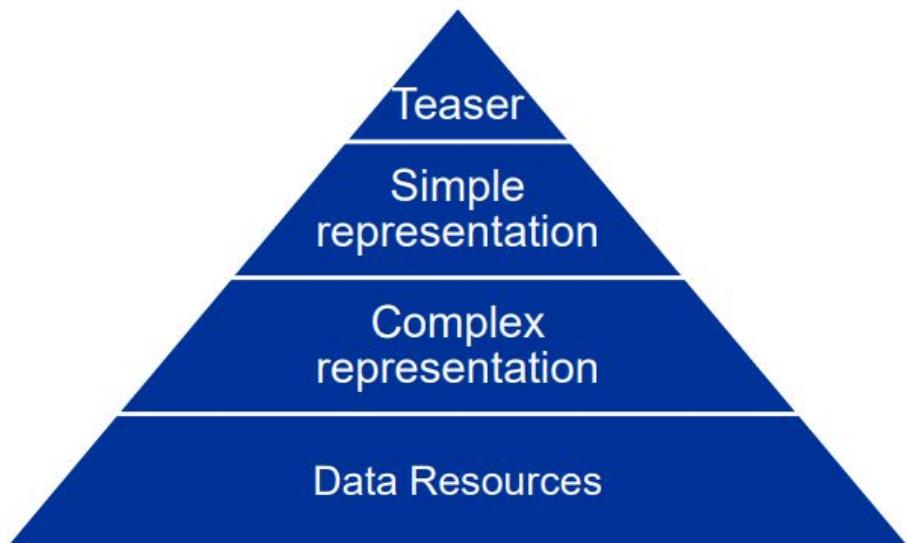

<sup>8</sup> In addition, it may be useful to rely on a "communications maturity model" approach to help statistical organisations gauge their current communications maturity and to propose areas for improvement (UNECE (2021)).

- **Resources** – the different channels involved and the various skills required for communicating statistical content have to be clearly assessed.
- **Communication channels** – there are different ways to disseminate statistical information. This calls for adopting a clear information hierarchy to set up the level of details that are appropriate given the audience targeted (Graph 4). Communication can be very generic, for instance to address common data requests by providing well-established reference material – eg press releases, statistical publications, data portal and (micro) dashboards, frequently asked questions (FAQs), “hot topics” on the website. It can also be highly tailored, to answer specific questions (eg for supporting internal policy users) or to allow users to explore the information in a self-service way. In any case, good collaboration is essential when developing these channels, in particular with business units to craft relevant “narratives” and with the central department in charge of the broader communication strategy of the institution.

---

The information hierarchy supporting ECB statistical communication

Graph 4

---

Source: M Rumpf (2024): “Building an ecosystem for statistical communication”, *IFC Bulletin*, no 60, March.

- **Target audiences** – all the various groups of users of statistical information need to be carefully identified. While a key focus group relates to internal data users, such as research and policy units, central banks are also increasingly considering the large variety of external audiences, comprising the general public, journalists, policy observers and specialised users (eg financial market participants, data vendors), researchers, students, etc (see Section 3).
- **User information needs** – the communication of statistical content should fundamentally be two-way, ie by proactively engaging with users and being responsive to their needs. A comprehensive framework can help monitor the usage of the communication tools and collect user feedback in a structured way (eg to analyse logs on the website, traffic in social media, etc). It can in turn facilitate the design of specific communication responses, for instance by crafting new material, linking statistical content, redirecting requests or adapting language and terminology. One practical example of such a two-way

communication strategy was the initiative by the Bank of Israel to leverage innovative technologies to monitor and prioritise its communication channels and better align with user needs.

### 3. External communication target groups

#### The limitations of a one-size-fits-all approach

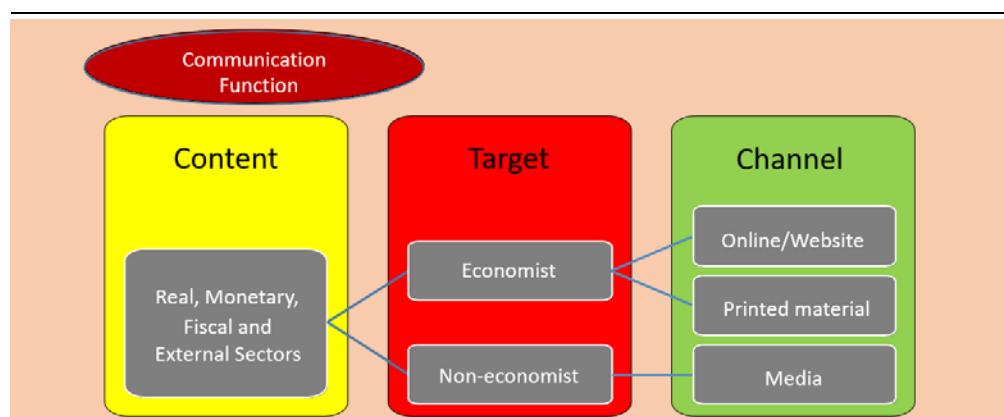

In the past, most of the statistical information for external users was uniform: it was typically prepared for experts, as the general public was not considered a top priority; and it was often based on written documentation, with a lack of visual material. Such a one-size-fits-all communication approach, however, has clear limitations. **To be effective, communication should reach out to and engage with a variety of different groups**, consider their distinct needs and be tailored to their various levels of sophistication and knowledge.

Indeed, **central banks' communication channels have clearly evolved in recent years** to better address the diversity of their target audiences. To this end, the Bank of Italy has, for instance, identified four types of user personas representing consumers of statistical information, namely unskilled users, skilled users, students and economists. The State Bank of Pakistan has also taken steps to target audiences in a more precise way, for instance by mobilising census data to take into consideration factors such as education, gender, income, language and economic activity. These efforts have been complemented by specific actions tailored to the diverse audiences. The dissemination of generic printed materials has been progressively complemented by various actions to target media outlets, strengthen the Bank's website, organise business and household surveys, engage more actively with specialised users such as economists, professionals and journalists, and, more recently, embrace social media platforms such as X (formerly Twitter) and Facebook (Graph 5). Lastly, the central bank has focused on developing more user-friendly language and infographics.

## The non-specialised audience

Reflecting their policy mandates as well as their role as producers of official statistics as “public good”, **a key audience for central banks is the general population**. Communicating in plain language is particularly important for this audience, not least because of its limited understanding of the technicalities involved in the production of statistical information. Yet, the notion of “plain language” can mean different things across target groups and over time.

To address these issues, **the Bank of Canada has launched an initiative to “help users think with data”**. The starting point was the recognition that people tend to place greater trust in recommendations from friends. This suggests that communication can become more effective if one can stimulate inclusive conversations, akin to friends having a coffee together. Another objective is to put suggestive content into raw numbers, by making creative comparisons to concrete phenomena so as to provide a “sense of scale” – for instance, by visualising what an amount of money represents in terms of banknotes piled-up together. Furthermore, storytelling can help transform numbers into clearer narratives, supporting the understanding of complex technical issues.

These communication initiatives have also been accompanied **by a greater focus on improving the public understanding of economic and financial concepts** (UNECE (2009)). The objective is to allow individuals to make more informed spending and investment decisions, in turn contributing to overall economic well-being. The central bank can make a key contribution to this endeavour, not least because it is responsible for producing an important part of the financial information available to the public. For instance, the Bank of Albania actively supported the setup of the national financial education strategy in that country, where economic literacy is relatively low and can vary significantly across population groups. The aim was to educate individuals about financial concepts, products and services through a combination of targeted teaching and communication initiatives. Similarly, the Central Bank of Malaysia has set up a strategic plan to foster financial inclusion that explicitly seeks to improve economic literacy in the country’s population.

Lastly, an important aspect supporting statistical communication with the general public is to **facilitate the interpretation of the data** by making use of innovative techniques such as dashboards and predefined tables (see Section 5 below). A central concept from this perspective is “data curation”, which relates to the creation, organisation and presentation of a curated view of the data so that they can be easily accessed and used by (unskilled) users looking for information.

## Students

Another **important target audience for central banks is students**. Their degree of understanding of statistics is typically higher than the general public but lower than more professional data users. Moreover, students present important challenges due to their diverse fields of interest, their different levels of education and, obviously, their large numbers.

In this context, **the Banco de Portugal has set up an initiative focusing specifically on university students**. It developed a dedicated e-learning course to present the main statistical concepts and access the data available on the central

bank's statistical website, BPstat. This called for close collaboration with a wide range of stakeholders, including economics schools, experts in digital learning and of course the various units of the central bank, eg its management and the most interested departments (communication, economics, statistics, international relations). A key achievement was the release of "Statflix", designed as a TV series encompassing different seasons focusing on a statistical topic (eg national accounts, financial statistics). Each learning sequence comprises an initial quiz to gauge students' familiarity with a particular topic, an interactive video, a flipbook, a podcast and a final quiz at the end (Graph 6).

### Statflix: the Banco de Portugal initiative targeting university students

Graph 6

Source: M Trincão (2024): "Statflix: a Banco de Portugal original series", *IFC Bulletin*, no 60, March.

---

### (Semi) professional users

There is merit in focusing in a relatively detailed way on the **wide range of users that consume data because of their professional (eg financial market participants) or semi-professional (eg key politicians or well-known academics) activities**. For instance, the ECB has conducted in-depth interviews with specific categories of professions when designing its new data dissemination strategy (Graph 7).

**Financial journalists** can be of particular importance from this perspective, reflecting their multiple roles (UNECE (2021)). They are in particular (i) influencers (eg press commentators); (ii) scrutinisers (eg observers of central bank decisions; Koop and di Vettimo (2023)); (iii) knowledgeable intermediaries (eg specialists to facilitate the general public understanding of complex issues)<sup>9</sup>; and (iv) trusted stakeholders (eg media with whom the central bank has built or wants to build relationships not least to convey policy messages (Bezoska (2018)).

<sup>9</sup> For more on the role played by media specialising in financial affairs with respect to the average citizen, the educated public and the central bank, see Blinder et al (2001).

## User research

Based on in-depth interviews with 44 professional, semi- and non-professional users, pain points were identified and new requirements envisioned

---

Source: K B Simon and J A Sánchez Hernández (2024): "ECB Data Portal – making statistics accessible in a fast pace digital world", *IFC Bulletin*, no 60, March.

---

Reflecting the above, the Central Bank of Pakistan has set up dedicated training facilities for media journalists. Similarly, the BIS has worked on defining a typical data user journey for journalists in order to enhance its statistical dissemination strategy. As noted at the Bank of Italy, a key need of these users is the ability to easily and rapidly download graphs and tables to support the writing of news articles.

## Researchers

One group of users receiving increasing attention are **academic researchers, who are typically knowledgeable about the data and how to use them**. This audience is relatively similar to the internal users of the statistics, who are typically the economists in charge of supporting policy and research activities within central banks.

The central banking community has been increasingly focusing **on improving its statistical offering for external researchers**, for instance in the context of the related work conducted under the aegis of INEXDA (the International Network for Exchanging Experience on Statistical Handling of Granular Data). This initiative has comprised various actions to develop a metadata schema describing granular data sets, identify data access procedures and review best practices targeting the specific audience of researchers (IFC (2018)).

One concrete example relates to the **project by the Deutsche Bundesbank to facilitate the access for non-commercial research to micro data sets that can be highly sensitive**. Several approaches can be followed for this purpose, for instance by granting on-site access to researchers, giving access to anonymised "scientific use files", or remotely executing programmes in a controlled way (based on the codes provided by researchers). Furthermore, the Bundesbank provides specific resources to assist researchers in terms of documentation, information technology (IT) packages, etc. It also engages actively with users to better assess their needs in more detail, for instance by identifying who they are in terms of their experience and degree of understanding of the related statistical issues (Graph 8).

## 4. Developing new communication channels

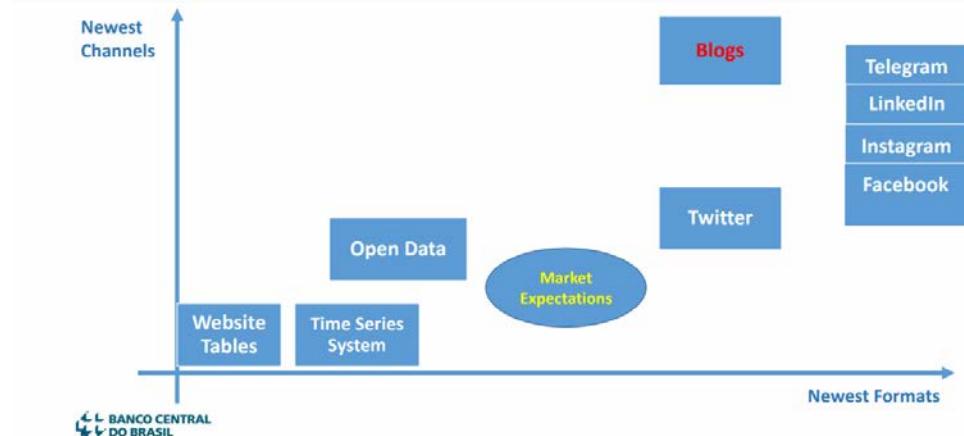

The objective: reaching out to the broadest possible audience...

**The cornerstone of the communication of central banks' statistics departments is the actual dissemination of economic and financial data.** As reported in the case of Brazil, all the various actions taken to embrace novel communication tools, refine outreach strategies and develop innovative data products have the purpose of disseminating statistics better (in terms of availability, serviceability and timeliness). A case in point relates to the large range of business intelligence tools (eg dashboards, interactive graphs, infographics) that have become available in recent years to support data communication across various groups and channels (IFC (2019)). Yet the choice of the "right" communication approach should consider a large range of factors such as efficiency and cost-effectiveness, the appropriateness for the targeted users and the possibility to reach a broader group (Graph 9).

Such analysis can be key to **selecting the visualisation tools that can make it easier for the target audience to understand the data** (see Carson (2009) and Ten Bosch and de Jonge (2008)), the use of a certain type of words (eg plain language for the general public versus more technical terms for sophisticated users), and the choice of the actual information content conveyed to the users depending on their degree of statistical literacy. These choices can be helped by a thorough review of the public's demand for information. For instance, De Nederlandsche Bank conducted an extensive survey of its users' preferences, which highlighted the need to provide narrative explanations supporting the disseminated figures and also a more comprehensive overview of the array of the statistical products available.

## Statistical channels and formats at the Central Bank of Brazil

Graph 9

Source: F Lemos (2024): "New channels, new approaches, new data formats", *IFC Bulletin*, no 60, March.

...by making the most of the wealth of data available...

**Central banks have also realised that they sit on a wealth of data that are not fully exploited**, despite significant potential interest among internal and external user groups. A case in point relates to the vast amount of micro data available as a by-product of administrative and economic activities, such as granular payment transactions, financial prices observed in specific market segments, individual responses to firm and household surveys, etc (Israël and Tissot (2021)).

**One telling example** is the initiative of the statistics department of De Nederlandsche Bank to provide more insight on the mortgage market – which has traditionally been a source of great public interest in the Netherlands – by developing several dashboards built around specific themes and making use of various micro-level sources. This initiative faced a number of challenges, especially regarding the resources to be mobilised for setting up the data sets and publishing them; the required technical knowledge, for instance for developing visuals (eg use of the interactive charting software Highcharts); the related external dependency aspects; the different types of information, especially in terms of consistency and comparability; the quality of the newly exploited data sets; and the privacy, confidentiality and legal issues posed by the use of such very granular information.

Another important objective is to **facilitate the dissemination of more granular information by developing new types of indicators** that can help put isolated numbers in a broader context. For instance, the Reserve Bank of India has developed comprehensive fan charts to better convey the degree of uncertainty surrounding specific indicators. The objective is to provide more comprehensive information, allowing users to better understand the precision of published forecasts, the risks involved and the importance of the relationships between certain phenomena.

## ...and using all media opportunities...

The direct dissemination of information organised by institutions like central banks can be **usefully complemented in a more indirect way through the use of the main means of mass communication**, such as newspapers, TV networks or the internet. An obvious reason is that people are dedicating an increasing amount of their time to consuming media content. This trend has been reinforced by the fact that, over time, traditional mass media have become more personalised "self-media", arguably providing additional benefits in terms of familiarity, active user engagement and individual control.

What can help central banks effectively navigate this increasingly competitive and changing media landscape? As recognised at the Banco de Portugal, **the selection of a media platform is a fundamental decision** that should be aligned with the overall strategy of the central bank. A number of important factors have to be taken into consideration when making such a choice:

- **Suitability of the selected media for the audience targeted** – this calls for a thorough analysis of the characteristics of the target audience in terms of, for example, demographics, preferences and behaviours.
- **Relatability** – the media should be able to convey messages that are easy to understand (eg accessible and visual) and relatable to people's everyday lives (Gardt et al (2021)). This can be challenging when dealing with statistical concepts, and it calls for creating innovative content that can better resonate with users. The selected media should therefore adequately support the choices made in terms of communication language, formats and techniques.
- **Analytics-driven and two-way approach** – the media should convey insights based on data, which is the primary objective of statistical communication; in turn, metrics on users' behaviour and engagement should be available so as to refine communication initiatives.
- **Variety** – it is useful to explore a diverse range of media before deciding to select those that resonate better with the target audiences.

## ...including social media

It is estimated that about 60% of the world population is using social media, and this number continues to grow over time, especially among young individuals that are increasingly turning to such platforms when looking for specific information (instead of using the internet, for example). This development is raising increasing interest among central banks, as it is in other statistical agencies such as NSOs (Glävan et al (2016)). Indeed, **the recent survey organised by the IFC shows that central banks' use of social media has risen remarkably over the past decade and is expected to progress further** in the coming years (IFC (2023a)).

A main objective has been to **establish a formal presence on selected social media platforms**, not least to be able to engage with a more diverse audience. The aim is, first, to make better use of social media opportunities to foster a sense of community and interaction among targeted users. And second, the objective is to get feedback from them to refine the content of statistical communication. This calls for carefully analysing social media usage and developing adequate metrics for monitoring, as emphasised by Paulo Rossas (Lisbon Digital School). A starting point

is to identify the motivations of social media users, ie if they are looking for entertainment, learning possibilities, social interactions or to make purchases, for example. Another important point is to assess their degree of "engagement", ie how users interact with the content of the social media of interest – whether they "like" it, the comments they make and the actions they take to share specific news with other users.

In practice, **a large variety of indicators can be used for monitoring purposes**. Users' interactions can be measured by counting the number of "shares", "comments" and "likes" generated by a given post. In turn, users' engagement can be assessed by comparing the interactions generated by a given social media post with the overall number of people that have actually seen it. Specific metrics can also be used for analysing website usage, eg in terms of "time on site", "page views", etc. Furthermore, the identification of specific user profiles, such as "lifetime engaged users", "followers" or "retweeters" can be useful to target specific audiences, for instance to identify "influencers" and "opinion leaders".

## 5. Leveraging innovation

Central banks are actively reviewing their **statistical dissemination methods**, identifying current limitations and developing ways to address them. The main focus points reported are the reliance on static statistical products with little user interaction, the complexity of current data ingestion procedures, and users' difficulties in identifying, locating and accessing published content on the website.

IT innovation can be helpful to address these challenges, especially if it can be shared with the wider data community. As highlighted by the recent initiative developed by the Bank of Italy, **the objective is threefold**: (i) make statistical information more accessible to a broader audience, particularly individuals with limited statistical knowledge and also potential users; (ii) improve the ways to access and analyse the data disseminated by the Bank; and (iii) solidify the Bank's relevance and reputation in the statistical domain by keeping pace with the most advanced national and international peers. The approach relied heavily on innovative IT techniques, with a focus on providing a variety of tools to users of all levels, from the unskilled to the more sophisticated: digital publications, interactive graphs, dashboards and, last but not least, a statistics portal (Graph 10) – that is, an online platform that allows users to access, modify and reuse in an open way the statistics made available by the central bank.

### Data portals

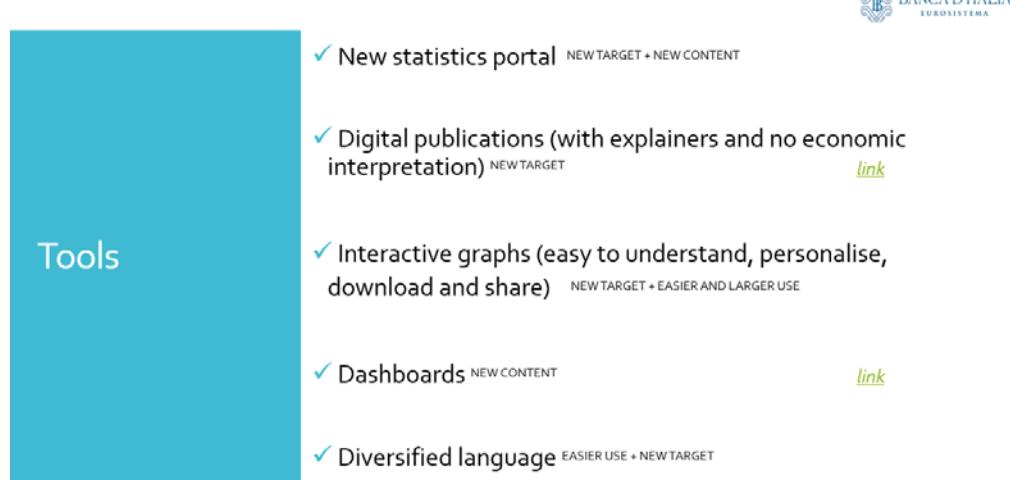

Reflecting the Italian example, central banks are increasingly taking action to **develop single data portals to both strengthen their communication and enhance users' experience**. The aim is to provide the public with a consolidated platform presenting data from different sources and with a dedicated web application, unified statistical tools and channels, as well as a proper organisation of statistical information (data and metadata) to guide data discovery and exploration. The approach is typically holistic, with the portal intended to serve as the primary access point for all types of users so that they can easily search and find the information they need.

---

## Tools for statistical communication at the Central Bank of Italy

Graph 10

---

Source: L Bartiloro (2024): "Innovating statistical communication in Banca d'Italia", *IFC Bulletin*, no 60, March.

---

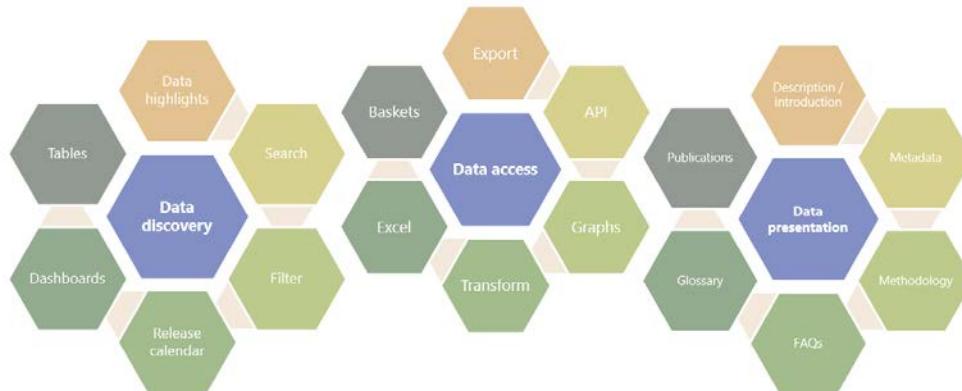

A related initiative developed at the BIS shows that **a useful way to organise a data portal is to focus on three dimensions – how to discover, access and present the statistics** (Graph 11).

---

## The BIS Data Portal project

Graph 11

---

Source: E Lambe and T Park (2024): "The BIS Data Portal project - delivering the next generation platform for BIS statistics", *IFC Bulletin*, no 60, March.

---

One key issue was to set up an effective "search" function within the portal. Another important consideration was to target different types of personas (general public, journalists, researchers, students, statisticians) and reach out to a broad range of diversified social media (from business platforms such as LinkedIn to image-sharing networking services such as Instagram). Another issue is the potential trade-off between two different goals. On one hand, a data portal can allow central banks to make freely available all the wealth of data that they can produce as public goods

that can be accessed, exploited, edited and shared by anyone ("open data"). On the other hand, a data portal allows for providing a selected and educated ("curated") view of the complex data available so as to facilitate a user's journey. For instance, the BIS has been working on making available so-called "publication tables" in its new data portal.<sup>10</sup>

In practice, how should one proceed when deciding to develop a data portal that properly meets user needs and efficiently supports the overall statistical communication of the institution? The ECB has identified **the following three phases to consider** in a comprehensive way (Graph 12):

- **Discovery phase** – the aim is to thoroughly examine the preferences and requirements of the various user types, ranging from the general public to professional users. One useful approach followed by the Central Bank of Iceland has been to organise interviews with different target groups. Another is to conduct a benchmarking exercise to learn from existing projects, best practices and challenges encountered.
- **Exploratory phase** – this stage should be devoted to selecting the data to be published, designing the portal tools and visual features, testing with users and subsequently refining the project based on their feedback.
- **Implementation phase** – this would typically follow a roadmap outlining the development and deployment timeline in several steps, from the creation of a pilot version to the public launch of a fully ready portal.

### Developing a data portal: three phases

Graph 12

Source: K B Simon and J A Sánchez Hernández (2024): "ECB Data Portal – making statistics accessible in a fast pace digital world", *IFC Bulletin*, no 60, March.

<sup>10</sup> A publication table is defined as "a curated table of data, where the values in the table rows, columns and table body cells can be individually specified". It "enables a single table to pull data from multiple sources and piece the data together in a way which is not possible when dealing with standard cubes of data" (see E Lambe and T Park (2024): "The BIS Data Portal project - delivering the next generation platform for BIS statistics", *IFC Bulletin*, no 60, March).

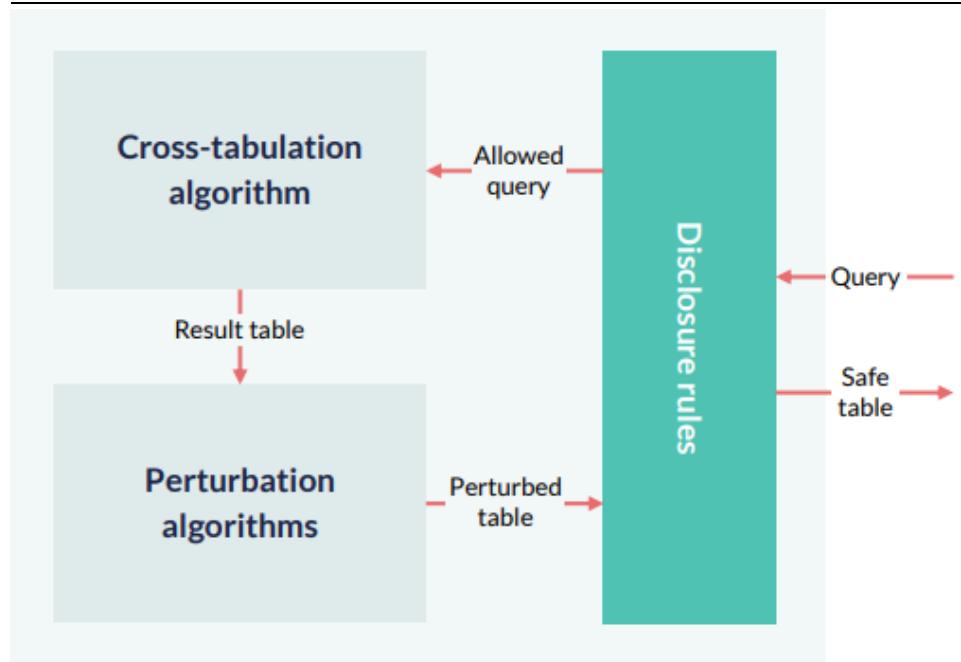

## Using new technology

**One of the most sophisticated use cases faced by central banks relates to sharing very granular information without compromising confidentiality.** Technology can help address this need, as shown in the dissemination service of census results developed by The Sensible Code Company for the NSO in the United Kingdom. The objective was to enhance the communication of granular insights, with the ability for users to create personalised outputs (eg customised tables) according to their specific needs and interests (Graph 13). Cross-tabulation and perturbation algorithms were used to anonymise the information, and the NSO's control through automated disclosure checks ensured that the dissemination of the data adheres to requested privacy and security standards. The tool also incorporates automatic checks, allowing for earlier data releases while reducing the likelihood of errors.

---

### Disclosing micro data insights while protecting confidentiality

Graph 13

Source: M Thompson (2024): "Flexible dissemination software for the 2021 England and Wales Census", *IFC Bulletin*, no 60, March.

**AI techniques can also be mobilised for statistical communication** in central banks (Araujo et al (2024)). These techniques may support a wide range of tasks, from identifying user types to offering customised solutions that are tailored to their specific needs and degree of literacy. Thus, one strategy followed for strengthening statistical dissemination has been to collect user feedback and set up prototype mockups based on the type of technique that is best suited for addressing identified target groups.

For instance, the Central Bank of Iceland has been using the Power BI platform to **develop interactive graphs** for key economic indicators as a way to enhance data accessibility and user engagement. The approach followed has been sequential, with

the development of more sophisticated tools depending on the degree of user knowledge (Graph 14). The offering comprises simple dashboards as well as more complex applications supporting the retrieval of time series and selected interfaces, allowing users to interact with the central bank system through a dedicated application programming interface (API).

Source: B Þ Gíslason (2024): "Accessible digital economic indicators at the Central Bank of Iceland", *IFC Bulletin*, no 60, March.

---

Similarly, the Bank of Canada has **developed a user interface** – its Valet Web Services API – that facilitates users' access to the Bank's statistical offering, for instance to automatically retrieve financial data series (Graph 15).

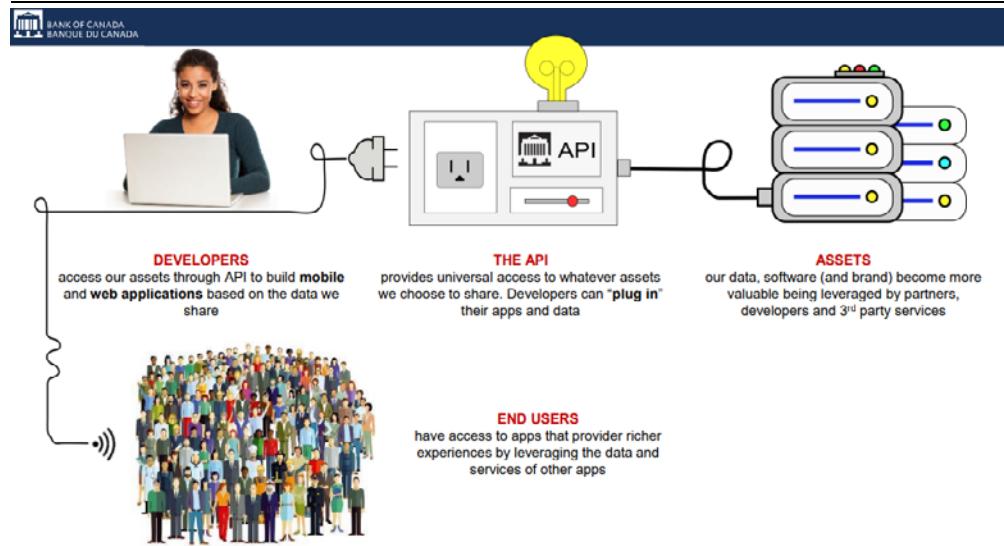

New communication **opportunities also arise from the significant progress observed in the field of NLP** (IFC (2023b)). For instance, the Reserve Bank of Australia has used an NLP model to analyse how various audiences perceive communication quality in terms of the degree of readability and reasoning attributed to the messages published, depending on the types of audience considered (Huang and Simon (2023)). Another approach followed by Bank Indonesia aimed to capture public opinion, as expressed on social networks, on issues related to central bank activities (Jabbar et al (2023)).

Furthermore, a key recent development is the **breakthrough provided by LLMs such as ChatGPT** – the language model developed by OpenAI that is capable of generating text based on context and past conversations (Araujo et al (2023), UNECE (2023)). Some central banks have already started deploying LLMs in various tasks supporting the external communication of their statistics, especially to handle inquiries from the public or financial institutions or to explain complex topics. LLMs might also assist in offering training possibilities for the broader financial community and the public at large, by making complex topics more accessible, enhancing financial literacy and supporting data queries through more intuitive interfaces.

---

## Accessing data through an API-based user interface at the Bank of Canada

Graph 15

---

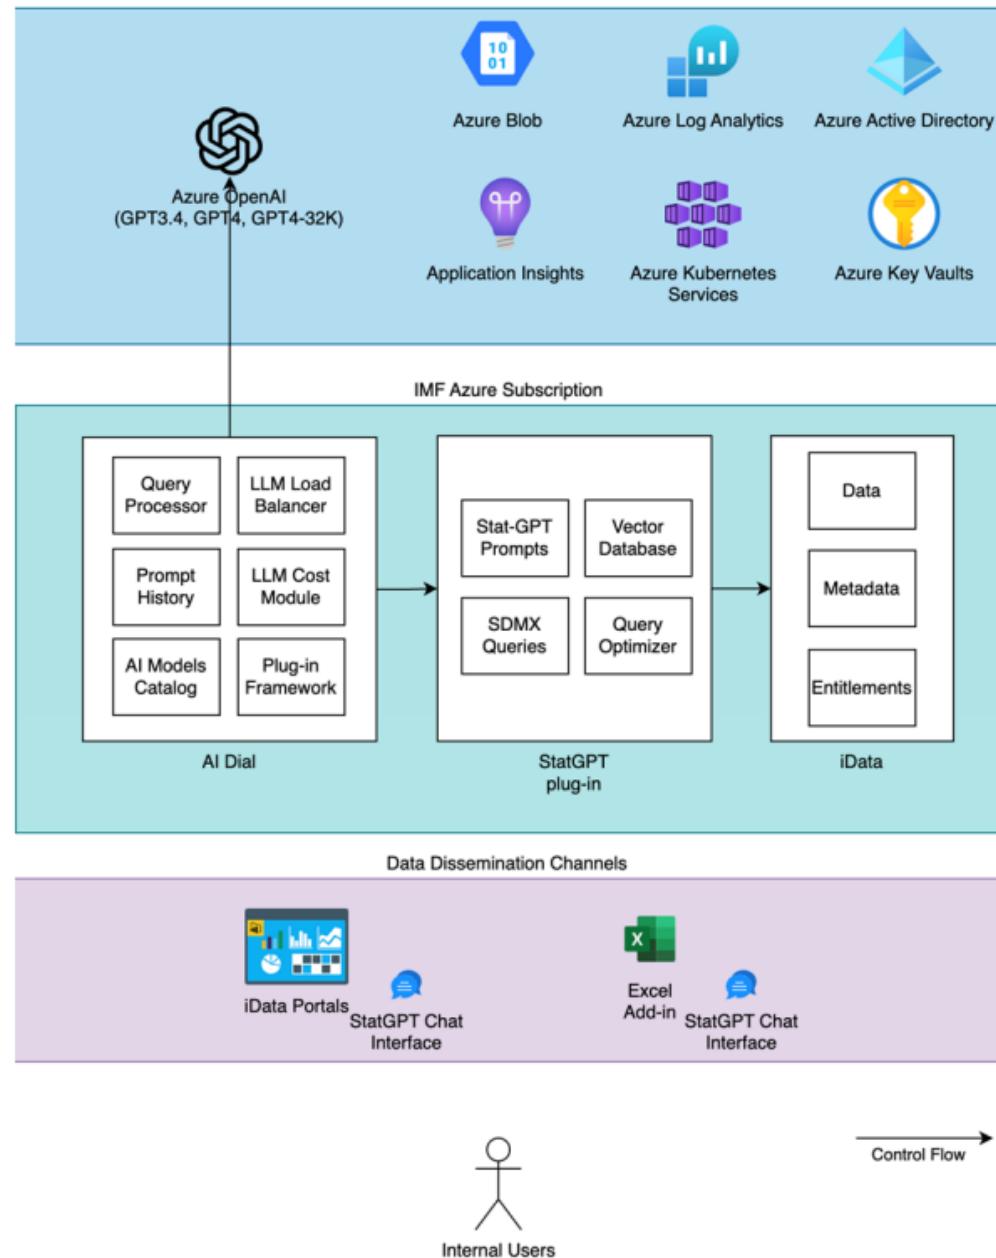

Source: A Geraghty (2024): "Helping users think with data: statistical communication at the Bank of Canada", *IFC Bulletin*, no 60, March.

---

**One telling example** is the International Monetary Fund (IMF) StatGPT project to modernise its statistics processing and dissemination platforms. The project relies on the use of generative AI to establish better search and browse capabilities, in turn enhancing the user experience and quality of the analysis (Graph 16). Yet, one difficulty, common to AI-based applications in general, is that data insights cannot be communicated as a "black box" and require transparent explanations to the users.

## Introductory speech

### Communication on central bank statistics: unlocking the next level

Ana Paula Serra, Member of the Board, Banco de Portugal

Lisbon, 19 September 2022

Good afternoon to everyone. It is my pleasure to welcome you to Lisbon and to have the opportunity to open this conference on a topic that is very dear to me.

I want first to thank you all for joining us in this conference, both those that were able to come to Lisbon, and those that are joining us online. I also want to thank the Irving Fisher Committee for their constant availability and great cooperation with the *Banco de Portugal* in organising this conference. Our relation and commitment to the IFC has been truly rewarding. Lastly, a special thank you to all the speakers who will be sharing with us their experience in this field, and who will certainly contribute to very stimulating discussions in these two days.

If you allow me a short personal note, I would like to share with you that the last time I spoke in person at a statistical event was also in this room in February 2020. At that time, I had the pleasure of participating in a conference on External statistics that was jointly organized by the *Banco de Portugal*, the Irving Fisher Committee and the European Central Bank. I know some of you were also here for that conference. It was likely the last big meeting on central bank statistics before we all moved into an exclusively online world. For this reason, it fills me with great joy to be welcoming you all here, after such a long and challenging period. But since we are constantly learning and adapting, and because we have seen also great advantages in having online meetings, this conference is also taking place online, thus allowing for a greater number of participants, including some that otherwise would not have been able to join this conference. One could say that the pandemic has unlocked the next level for international meetings and conferences.

Now let us return to what brings us here: unlocking the next level on communication of central bank statistics. But before we talk about the next level, I propose we analyse first the level where we currently stand: throughout these years, we have looked at statistical production as essentially a three-phase process: collection and monitoring of the data quality; compilation of statistical aggregates; and publication. And this was it. With the publication of our data, for instance, in our statistical websites, we believed our work was complete. But perhaps, in several cases, after publishing the data, we felt some frustration because our work didn't receive the

attention nor had the impact that we thought it deserved. Something must be missing in this process. Imagine that instead of producing statistics, we produce goods. First, we need the raw materials. Then we process them in our factory and build our products, which we then place on the shelves of our store. You will likely agree with me that a business that stops its process here, will fail to succeed. To facilitate the success of the good, businesses have to define its target customers, let them know that the product is available and even educate the potential clients on the products' usefulness. To achieve this goal, they to communicate with the clients. Communication aims precisely at bridging the gap between producers and the clients.

In our business, statistical communication with our customers has for some time been a missing link in our production process. Without defining our target customers and without a proper communication, the impact and success of our production will fall short. To have a proper communication it is essential that the users of statistics understand their meaning and are able to interpret them, making them an important tool to understand the society and for its own decision making .

I believe our mission will only be truly successful and complete if we succeed in bridging this gap: the gap that exists between us, the producers of statistics, and our customers, those that will use our statistics to help them in their work, their decisions, or sometimes just to satisfy their curiosity. I am talking about knowing who our users are, and provide them with the data they need, in a format they understand.

This is the next level of communication which we aim to unlock during the next two days:

- First, know our users: define who our target audiences are, and what are their characteristics;
- Second, understand their needs: investigate what are the data needs of each target group, and even anticipate their needs, or find ways to show them why they need something they were not aware was important;
- Third, when in Rome, do as the romans do: we must speak the same language as our users, and use the communication channels that they use.

To help us unlock this next level, over these two days we will have the chance to hear experts from different corners of the world talk about their experience and prospects regarding communication on central bank statistics. We will hear how different central banks have been setting up the communication function, their main challenges and the different solutions they have explored.

However, this not a conference to discuss simply the importance of statistical communication, we are all well aware of that. This is a conference for those who believe that helping our users explore and understand our data will empower them, which will in turn grow our influence in society. For this reason, I invite to focus our discussion in

the future. Tomorrow, at the end of this conference, we should have set out our vision for communicating statistics in a valuable and impressive way.

A few months ago, in preparation of this conference, we launched a survey to all IFC members, to understand where we all stand, and what are our priorities in this field. I want to thank everyone that participated, as this was an essential input when organising this conference. We received around 50 answers to this survey, which, for us, was already a very clear indication of the importance of this topic. The results of the survey will be presented before each session, to set the ground for the presentations and discussion to follow.

As I mentioned, over these two days we will have the chance to discuss the present and the future of central banks statistics communication, and to build a collective motivation for moving into the next level and truly evolving the way we communicate.

We will start by discussing how to start a statistical communication function in a central bank, and what are the skills that we need. The second session will be dedicated to our targets: who are they, and how do we reach and engage with each of them. We will then conclude today's works with a discussion panel with participants from different backgrounds that will explore the language that we use, and how simplifying our language can have an important effect in promoting statistical literacy.

Tomorrow, the programme will be dedicated to communication channels, with two sessions aimed at exploring how and what channels are central banks using to communicate with different target groups. To help us understand how we can collect and explore data on our users, we will benefit from a keynote speech on using web analytics services. Finally, we will have the pleasure of listening to Pablo Garcia, the Vice-Governor of the Central Bank of Chile and chair of the IFC, who will give the closing remarks to this conference.

To conclude these introductory remarks, let me reinforce my main message: unlocking the next level in statistical communication is not an easy task, and it will force us into areas we are not familiar with, and that require skills that we have not yet developed. However, we have faced numerous bigger challenges as statisticians that we always overcame successfully. As soon as we understand that communication is truly part of the data value chain, and that our work is not complete without it, I believe that we will do whatever it takes to fulfil our role and our mission.

I thank you again for your presence and your collaboration, and I wish you all a very fruitful conference. Thank you!

---

Closing remarks by the IFC Chair

**Communication on central bank statistics:  
unlocking the next level**

Pablo Garcia, Deputy Governor, Central Bank of Chile

Lisbon, 20 September 2022

Good afternoon. On behalf of the IFC and the Banco de Portugal, I would like to express my sincere appreciation for your participation and your very valuable contributions to this conference on Communication on Central Bank Statistics.

Over the last two days, we have had the opportunity to share diverse experiences and views about the statistical communication function. I am happy to note that we benefited from a global attendance from the central banking community, despite difficult international times: Europe, Asia, North and Latin America were all represented. This is a welcome development after the difficult years we have faced during the pandemic, and it is nice to be back face to face.

So many thanks to Banco de Portugal for making this happen, especially Ana Paula, Luis, Antonio and the rest of the team both on statistics and support. I am certain that the takeaways from this event will further deepen our understanding and stimulate our future work. Let me provide a few ideas in that direction.

First, statistics are not an end in themselves. Collecting statistics is necessary, but it is an incomplete effort if we do not succeed in communicating them well. We are entering a new era characterised with new types of tools, such as big data analytics and natural language processing, but also we are facing new demands from all our audiences and users.

Second, in order to be useful to users, we need to continue to strive to clearly structure and present data in a manageable format, so as to be clearly communicated via a user-friendly system. Communicating is not just about publishing numbers, it is also about putting them in perspective. We need to let our data talk. Official statisticians must select the information that is relevant, resend it in a way that users can relate it to their own interests and circumstances, using language and tools coherent with those used in other contexts. Technology will help us, through new and varied data visualisation techniques for displaying statistical information and a large choice of publication medium. But we never should forget that content is key.

Third, there are many challenges. Obvious challenges relate to the operational and technical level, for instance in terms of staff resources, IT budget, etc. Yet a key difficulty for central bank statisticians is to make sense of the data. With the increased use of advanced analytical tools and complex data sources, it has become ever more important to ensure that the statistics produced are "interpretable" – so that specific explanatory causes or factors can be identified and communicated for policy use. Cross-communication with other areas of the

data ecosystem within the central bank (research, analysis, and policy) is necessary to make the interpretation consistent with the broad direction of policies and agendas of the central bank.

Fourth, communication has to be tailored to specific targets and depending on circumstances. On the production side, central bank statisticians have to facilitate the integration of data in policy analysis, and this calls for enhancing information-sharing and dissemination to authorities. On the user side, good communication is essential for authorities like central banks that must provide factual evidence when explaining their decisions, which is key for supporting their accountability and independence. In other words, communicating on the basis of “black-box calculations” is not an option if one wants to secure public trust.

Finally the importance of public support. Communicating on statistics calls for being transparent and ensuring that high quality standards are followed. This entails two major consequences if one wants to fully reap the benefits of sound data. One is that information has to be trustworthy and relevant: in particular, international harmonisation, high-quality standards, and user-friendly dissemination platforms are key. And the other consequence is that we should ensure that this information can be effectively used; that is, the data have to be accessible to analysts and policymakers. This calls for proper arrangements for sharing data securely, with due consideration of confidentiality considerations. Certainly, this can be challenging; in particular, preserving individual privacy rights and other ethical principles should be a top priority, but at the same time it is essential to establish proper governance mechanisms that facilitate the use of granular data.

How should we address these issues looking forward when designing our statistical communication strategies? The starting point are certainly the fundamental principles of official statistics, in so far as they can help to secure accountability, transparency, privacy, confidentiality, accuracy and timeliness for the data we produce. This applies of course for our own internal operations: for instance, we must provide transparent information on the sources, methodologies and procedures used so as to facilitate the correct interpretation of our data. But the application of the fundamental principles should have a much broader perspective, by providing literacy training to other groups, sharing our statistical expertise and playing a greater stewardship role together with our counterparts in the national statistical system and cover the multiple data sources that are now proliferating. I am happy to note that significant progress is already taking place on these fronts in the international statistical community in general and in central banks in particular.

I wish to close my remarks by expressing my gratitude to all those who helped us prepare and carry out our conference on Communication on central bank statistics: unlocking the next level. Thank you all.

DIGITAL IS HERE  
TO STAY

THE PANDEMIC  
ACCELERATED  
THE PROCESS

WE ADVANCED  
10 YEARS  
IN DIGITAL AND SOCIAL

LET'S USE IT  
TO OUR ADVANTAGE

HOW?

FIRST WE HAVE TO BE ON  
SOCIAL MEDIA

THEN WE HAVE TO CREATE  
A COMMUNITY

THEN WE HAVE TO LEARN FROM  
OUR COMMUNITY AND FROM ALL  
OTHER COMMUNITIES

# HOW?

# METRICS | DATA

# SOCIAL NETWORKS GIVE US EVERYTHING

# AND WE CAN FIND THE RIGHT PEOPLE FOR OUR BUSINESS

TO FIND AND UNDERSTAND  
PEOPLE,  
WE HAVE TO UNDERSTAND  
METRICS

WE LIVE IN A WORLD OF  
DATA, BIG DATA,  
INFORMATION

NEVER BEFORE INFORMATION  
HAS BEEN  
SO VALUABLE

AND NEVER HAS  
INFORMATION HELPED US  
SO MUCH  
TO DECIDE

TO CREATE  
TO IMPLEMENT  
TO TEST  
TO SUCCEED

HOWEVER,  
WE HAVE TO UNDERSTAND  
HOW PEOPLE USE  
SOCIAL MEDIA

THE TEMPTATION IS  
ALWAYS TO LOOK  
AT THE BIG PREMISE

HOW MANY  
DID WE REACH?

# HOW MANY SAW?

# HOW MANY INTERACTED?

# HOW MANY VISITED OUR WEBSITE?

# WE NEED TO CLOSE THE GAP BETWEEN REACHING AND INTERACTING

AND,  
UNDERSTAND  
THE CAUSE

INTERACTION WITH  
A CAUSE IS WHAT ALLOWS  
US TO LEARN

LEARN AND MAKE  
THE RIGHT DECISION

READY?

WHY PEOPLE  
USE SOCIAL MEDIA?

ENTERTAINMENT  
LEARN  
TALK TO FRIENDS  
GET CLOSER  
BUY THINGS

LET'S ASK THE  
RIGHT QUESTIONS

LET'S START WITH  
SOMETHING VERY HUMAN  
AND COMMON

HOW MANY PAGES  
DO WE VISIT DIRECTLY?

DO WE GO SPECIFICALLY  
TO PAGES?

ZERO AND NO!  
UNLESS WE HAVE  
A DIRECT PROBLEM  
WITH THE BRAND

WE WANT AN ANSWER AND  
IT'S USUALLY  
NOT FOR SOMETHING  
POSITIVE

WE ONLY VISIT OUR  
FAVORITES.  
AND THEY ARE  
FEW

SPORTS CLUBS  
INFLUENCERS  
CONTENT WE LOVE  
CONTENT WE NEED

INSIGHT  
HUMAN INSIGHT

99% OF US  
CONSUME CONTENT  
IN THE FEED

WITH INVESTMENT,  
WHO CONTROLS THE  
FEEDS?

ALL OF US!

WE PAY FOR  
OUR CONTENT/MESSAGE  
TO APPEAR  
IN FRONT OF PEOPLE

INSIGHT  
SOCIAL MEDIA INSIGHT

HOW DIFFICULT IS IT  
FOR ANY SOCIAL NETWORK TO  
TAKE ONE OF OUR CONTENT AND  
PUT IT  
IN A PERSON'S FEED?

ZERO!

SO, THE METRIC  
PAID REACH, CONTROLLED  
BY US,  
IS IMPORTANT?

YES AND NO

“NO”  
**I PAY TO REACH  
I WILL GET WHAT I PAID FOR**

“YES”  
**IF I EVALUATE  
WITH ANOTHER  
SPECIFIC METRIC**

**FOR EXAMPLE:  
ENGAGEMENT**

**ENGAGEMENT:**  
PEOPLE WHO INTERACT  
PEOPLE WHO SAW  
**X 100**  
**(FOR PERCENTAGE)**

ENGAGEMENT:

GREAT JOB IF

WE HAVE MORE THAN:

4% ON FACEBOOK

6,5% ON INSTAGRAM

2% ON TWITTER

6% ON LINKEDIN

DID THE PEOPLE  
WHO SAW IT,  
INTERACTED?

WE HAVE TO GIVE PEOPLE,  
SOMETHING TO  
INTERACT WITH

GREAT CONTENT  
QUESTIONS  
OPINIONS  
DEBATE  
PRODUCTS

WITH MONEY,  
WE CAN REACH 100%  
OF OUR TARGET...

BUT...ON SOCIAL MEDIA,  
IF NO ONE INTERACTS,  
THE MESSAGE  
WILL NOT GET THROUGH

AND WE WON'T LEARN  
ANYTHING FROM  
THE METRICS

AND WE WON'T BE ABLE  
TO DECIDE WHAT  
TO DO NEXT

ANOTHER VIDEO?  
ANOTHER QUESTION?  
ANOTHER INFOGRAPHIC?  
ANOTHER JOKE?  
ANOTHER PRODUCT?

INTERACTIONS ANSWER ALL  
THESE QUESTIONS  
(METRICS | DATA)

IF WE KNOW THE IMPACT  
WE KNOW THE CAUSE

AND THEN WE REPEAT  
OR INCREASE THE QUALITY

QUALITY,  
OF TOPICS THAT WE KNOW THAT  
WORK PERFECTLY TO ALL THE  
COMMUNITIES

BECAUSE WE  
CLOSED THE GAP,  
BETWEEN THE PEOPLE  
WE REACH AND THE PEOPLE  
WHO INTERACT

# Overview – Three Targets

- Motivate people to be willing to listen and learn
- Make statistical language plain and easy to understand
- Practice plain statistical language

## Target 1: Motivate People to be Willing to Listen and Learn

- We show empathy toward our collaborators when they have to deal with the statistical models that they don't have direct experience with
- We state our readiness to help people understand the statistical models and how our efforts could make their work easier
- We seek for people's feedbacks on which sections of our reports are too quantitative to understand

## Example 1 – Explaining Regression Models:

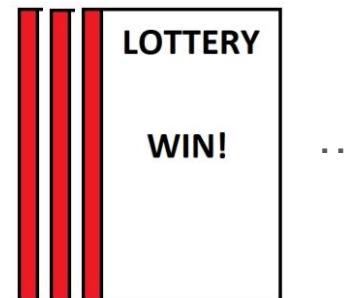

- Formal but less easy to understand language
  - Predictor and Response
  - Independent Variable and Dependent Variable
  - Exogenous Variable and Endogenous Variable
- Plain language
  - X and Y
  - Right of the Equation and Left of the Equation

## Example 2 – Explaining Probability:

- Formal but less easy to understand language
  - Assume there are 50 samples selected from the population, and the chance of each sample to pass the test is 18 percent, then the probability that all the samples passing the test is as low as
$$18\%^{50} = 6 \times 10^{-36}\%.$$
- Plain language

Chance to win  
1 lottery  
 $=18\%$

Chance to win  
all 50 lotteries  
 $=6 \times 10^{-36}\%$

**To achieve this we are co-authoring an academic paper with college freshmen**

**LOESS Smoothing for Weight of Evidence Transformation:  
An Application on Credit Rating Models**

**Mingfei Qiu\*, Minghai Qiu\*\***

BANKING AND MORTGAGE LENDING, BALANCES, 1ST QUARTER 2022  
Every third opt out fixed-rate on conversion

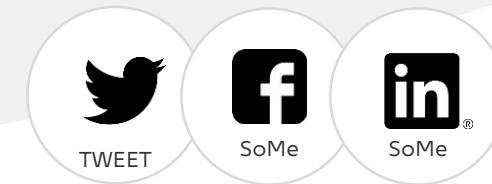

16.800 homeowners with fixed-rate mortgages have used the opportunity for conversion offered by their bank. The interest rate on these mortgages has increased from 2.5% to 3.1%. The remaining homeowners have chosen to keep their fixed-rate mortgage, while a third have converted to a variable rate loan. Their total amount of outstanding loans has increased from DKK 1.15 billion to DKK 1.18 billion.

35.400 homeowners have converted their fixed-rate mortgage loans to a variable rate loan. Their total amount of outstanding loans has increased from DKK 1.15 billion to DKK 1.18 billion.

10.000 homeowners have converted to fast-rate mortgages. The remaining homeowners who converted to a variable rate have chosen to do so at a higher interest rate than the average of other homeowners.

Most homeowners have converted to fast-rate mortgages. The remaining homeowners who converted to a variable rate have chosen to do so at a higher interest rate than the average of other homeowners.

For syvende måned i træk vokser antallet af lån med variabel rente.

**Danmarks Nationalbank** (@nationalbanken)

BANKING AND MORTGAGE LENDING, BALANCES, 1ST QUARTER 2022

Every third opt out fixed-rate on conversion

18,000 homeowners with fixed-rate mortgages have used the opportunity for conversion created by the interest rate increase. This means that 18,000 homeowners have converted their fixed-rate, converted mortgage loans amounts to c. 81 billion kroner. The remaining 42,000 homeowners who have chosen to keep their fixed-rate mortgages have chosen to do so because they feel that a variable rate will be more expensive than a fixed rate.

**Hver tredje boligejere har valgt fast rente ved konvertering**

18,000 homeowners with fixed-rate mortgages have used the opportunity for conversion created by the interest rate increase. This means that 18,000 homeowners have converted their fixed-rate, converted mortgage loans amounts to c. 81 billion kroner. The remaining 42,000 homeowners who have chosen to keep their fixed-rate mortgages have chosen to do so because they feel that a variable rate will be more expensive than a fixed rate.

Most homeowners have converted to fixed-rate

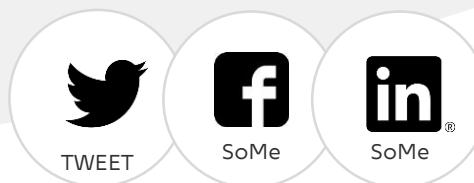

The remaining homeowners who converted have done so because they wanted to fix their interest rates. This means that 18,000 homeowners have converted to a fixed interest rate with a loan term of 10 years. The remaining 42,000 homeowners have converted to a variable interest rate with a loan term of 10 years.

**38,400 bolig ejere har om lagt deres realkreditlin i 1. kvartal 2022**

38,400 homeowners going from a fixed rate to a variable rate have converted to a variable rate. This means that 38,400 homeowners have converted from a fixed rate with a loan term of 10 years to a variable rate with a loan term of 10 years. The remaining 51,600 homeowners have converted to a fixed interest rate with a loan term of 10 years.

BANK OG REALKREDIT, BALANCER, 2. KVARTAL 2022

Endnu flere boligejere konverterede i 2. kvartal

13.300 boligejere med faststillede realkreditlin konverterede deres lin i 2. kvartal 2022. Det er samlet 38.400 boligejere med faststillede realkreditlin, der har konverteret deres lin i 1. kvartal 2022. Det betyder, at 51.600 boligejere med faststillede realkreditlin har ikke konverteret deres lin i 2. kvartal 2022.

Knap halvdelen af boligejere med faststillede realkreditlin konverterede i 2. kvartal faststillede realkreditlin til en variabel faststillede realkreditlin. Det betyder, at 6.700 boligejere med faststillede realkreditlin konverterede deres lin i 2. kvartal faststillede realkreditlin til en variabel faststillede realkreditlin.

Det er også mellem 10.000 og 11.000 boligejere med faststillede realkreditlin, der ikke har konverteret deres lin i 2. kvartal 2022. Det betyder, at 10.000 boligejere med faststillede realkreditlin har ikke konverteret deres lin i 1. kvartal 2022, men har konverteret deres lin i 2. kvartal 2022. Det betyder, at 10.000 boligejere med faststillede realkreditlin har ikke konverteret deres lin i 1. kvartal 2022, men har konverteret deres lin i 2. kvartal 2022.

Det er også mellem 10.000 og 11.000 boligejere med faststillede realkreditlin, der ikke har konverteret deres lin i 2. kvartal 2022. Det betyder, at 10.000 boligejere med faststillede realkreditlin har ikke konverteret deres lin i 1. kvartal 2022, men har konverteret deres lin i 2. kvartal 2022.

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

Together we make it better:  
How a multidisciplinary team unlocked the statistical communication function  
at the Banco de Portugal<sup>1</sup>

Lígia Nunes,  
Banco de Portugal

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# TOGETHER WE MAKE IT BETTER

## HOW A MULTIDISCIPLINARY TEAM UNLOCKED THE STATISTICAL COMMUNICATION FUNCTION AT THE BANCO DE PORTUGAL

19 SEP. 2022 | LISBOA

LÍGIA MARIA NUNES | HEAD OF STATISTICAL  
COMMUNICATION AND PLANNING DIVISION

BANCO DE  
PORTUGAL  
EUROSISTEMA

# EXPECTATION

# REALITY

**DO I REALLY NEED  
TO HIRE SO MANY PEOPLE  
TO PROMOTE  
CENTRAL BANK STATISTICS ?**

# MAYBE NOT....

MAYBE ALL YOU NEED IS TO  
COMBINE THE RESOURCES YOU HAVE  
WITH A TOUCH OF CREATIVITY....

# HOUSTON, WE HAVE A PROBLEM

- During the COVID-19 pandemic, central banks recognized the importance of providing users with the necessary statistical information to alleviate the uncertainty of those times
- We had the strategy and the channel – a BPstat webpage where users could access key statistical indicators (such as GDP, inflation, public debt, tourism, and corporation profitability) but also to provide an understanding of their evolution in that specific context
- PROBLEM: who would be in charge of creating that content?

# WHAT DID WE NEED?

WHICH  
DATA?

HOW TO  
READ  
DATA?

HOW TO  
PRESENT  
DATA?

HOW TO  
PROMOTE  
DATA?

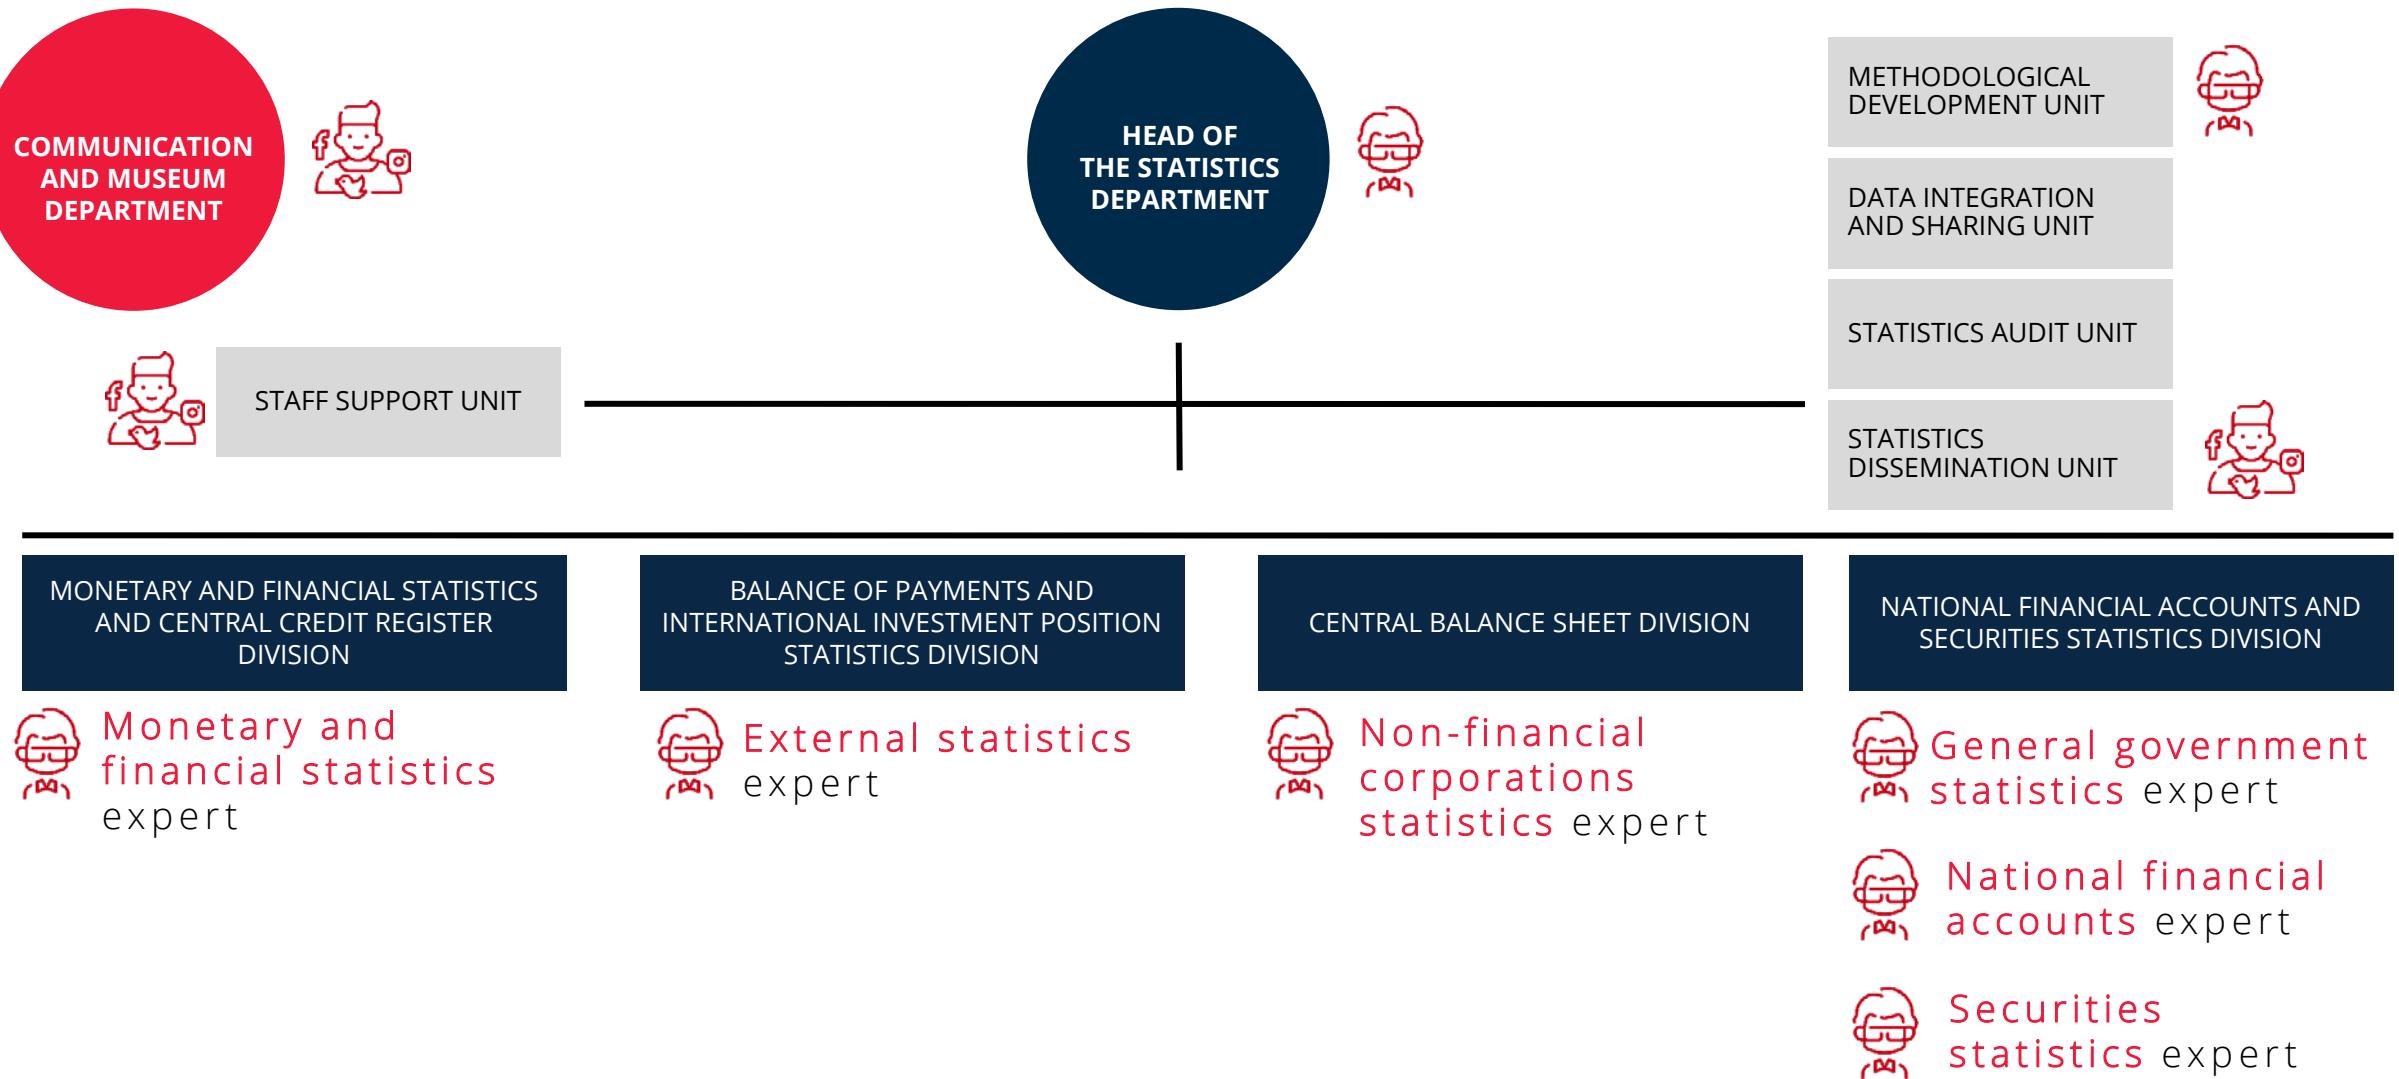

business expert

communication expert

# WE PRESENT THE STATSCOMM TEAM 1.0

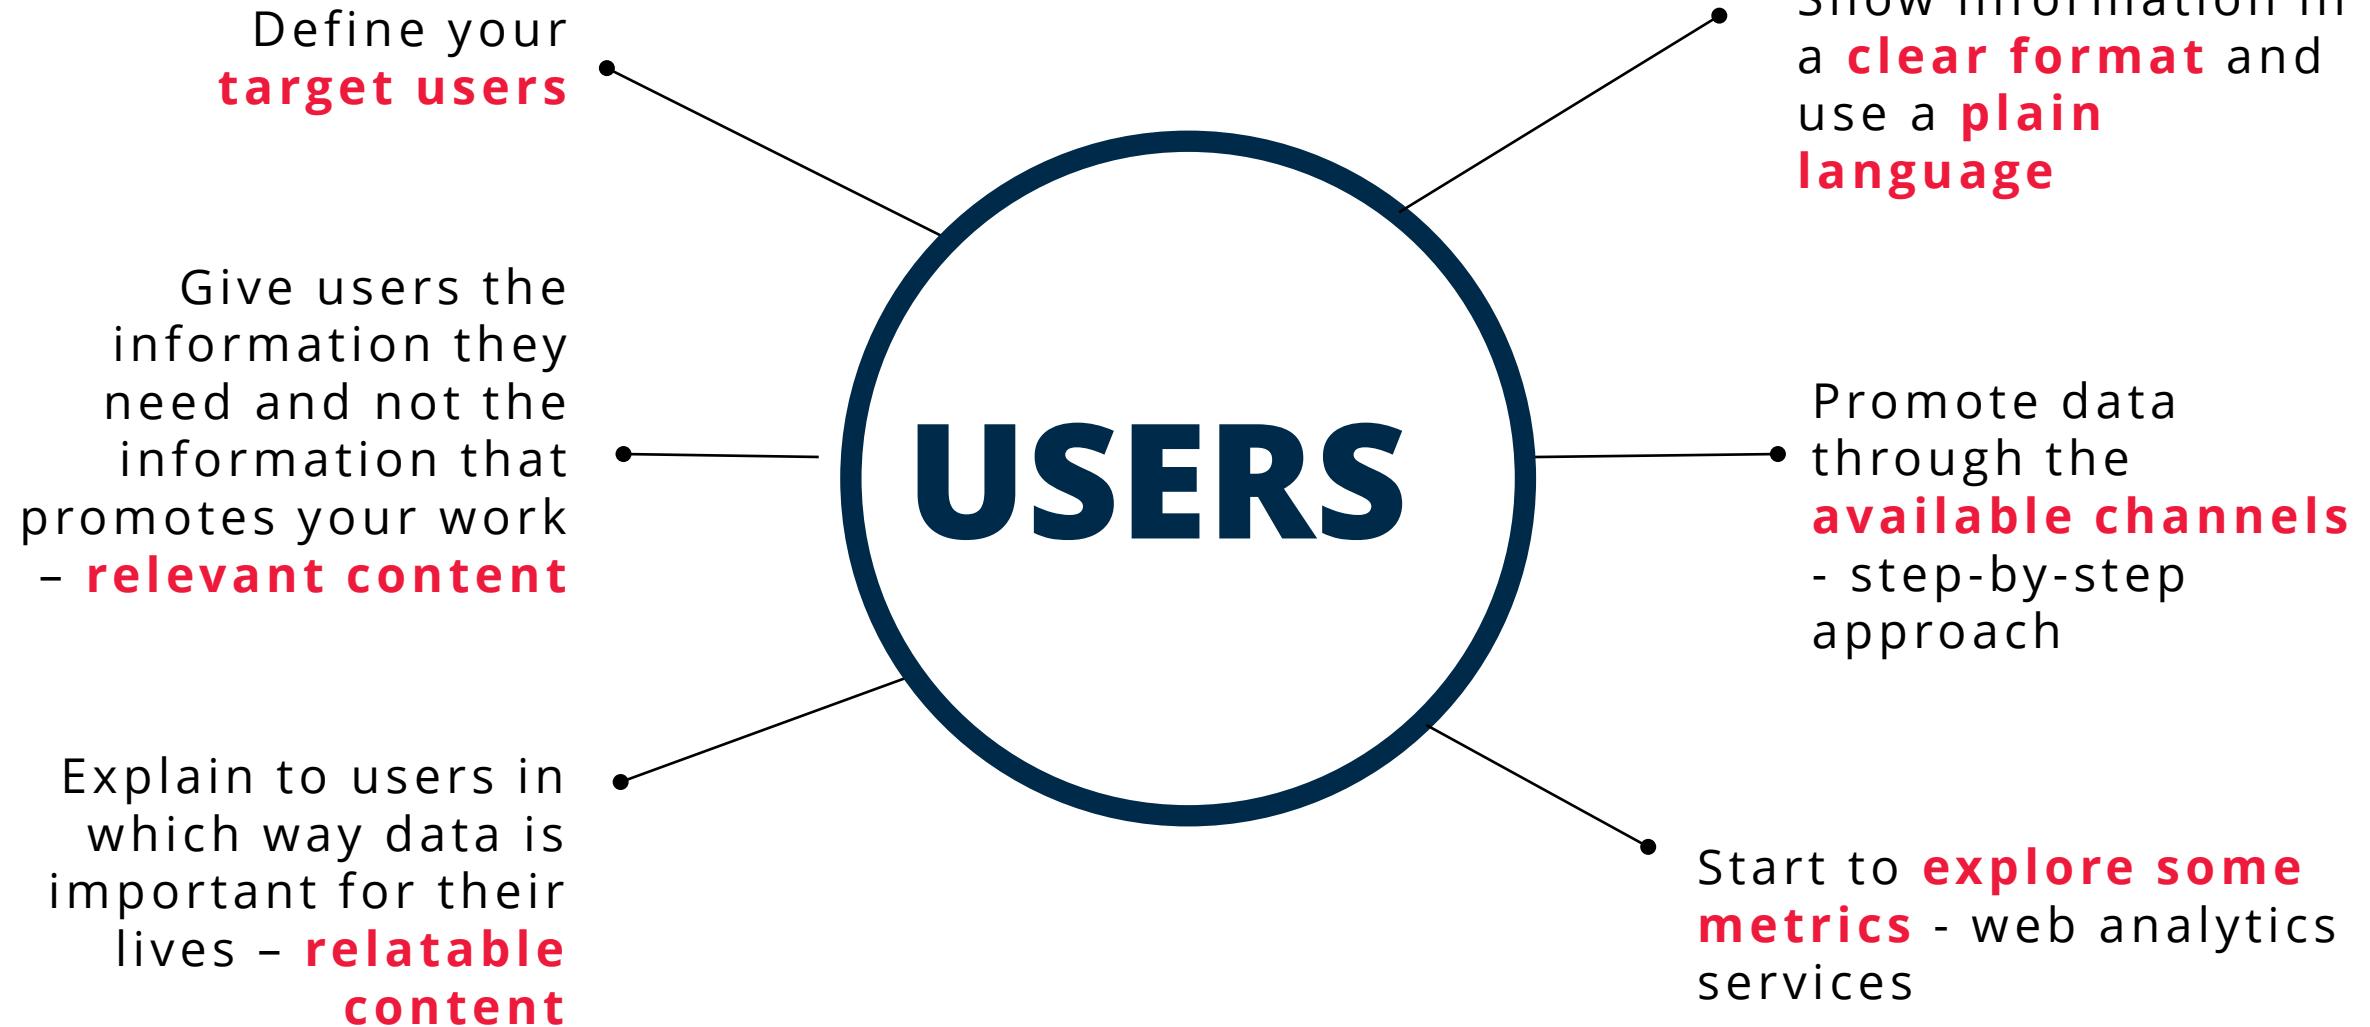

**DO NOT  
EXPECT  
DIFFERENT  
RESULTS  
DOING THE  
SAME  
THINGS.**

# DOING DIFFERENT MEANS...

## REGULAR INTERNAL TRAINING

- Sharing individual knowledge with the team;
- Sharing lessons learned from training sessions
- Conducting training sessions with the Communication and Museum Department
- Communication on Central Banking statistics - Post-graduate programme

## ANNUAL AND QUARTERLY COMMUNICATION PLANS

- Hot topics
- New statistics
- Relatable content (back to school campaigns, the year in figures, summer statistics, etc)

## REGULAR ANALYSIS OF RESULTS

- Number of visits to BPstat
- Most searched statistics
- Impact of statistics on media
- Questions from users

## Investment funds

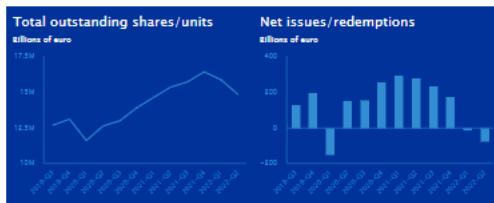

### Introduction

The data refer to the assets and liabilities of investment funds. In addition to outstanding amounts, transactions data are also available. Investment funds are distinguished by investment policy (equity funds, bond funds, mixed funds, real estate funds, hedge funds, other funds) and by type of fund (open-end or closed-end). Money market funds and pension funds are not covered in these data (dedicated statistics are available).

[A short text to explain the purpose and the coverage of this dataset. It should state briefly, why this data is relevant for central banks and where it is used. Could be the same text as used in the EDP]

### Latest data

[A summary of the latest data and changes from the previous period, either through a small dashboard as displayed below or with a table or a combination of both.]

### Profile & services

Update cycle: every quarter

Last update: 17.08.2022 (Q2 2022)

Next update: 16.09.2022 (Q3 2022)

Full dataset and alerts on data updates

[Publication](#) [Dataset on EDP](#) [RSS feed](#) [Email alerts](#)

### Overview charts

[A selection of charts with key indicators. Structure and composition is similar to the information provided in the news release. Charts will update automatically with the latest data in the SDW and provide access to different dashboarding options.]

[Each chart should be introduced by a general description on the data and concepts displayed.]

## A few takeaways

Different communication channels work more effectively when integrated into a communication ecosystem.

Communication channels building on narratives are more engaging; pathways to explorative platforms should follow a layered approach.

Explorative tools are more effective when integration into a narrative context is possible.

Hub page presenting features, content and services around specific datasets can facilitate the creation of a communications ecosystem.

# Thank you!

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## One size does not fit all: target matters<sup>1</sup>

Shahid Hussain Javaid,  
State Bank of Pakistan

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# One size does not fit all – Target Matters

SHAHID HUSSAIN JAVAID PHD  
STATE BANK PAKISTAN

# Agenda

- ▶ SBP communication: Overview
- ▶ Where we are
- ▶ Challenges
- ▶ What needs to be done
- ▶ Going forward

# Points to Ponder

- ▶ How to reach and engage with assorted population with statistical communication.
- ▶ Helping people using and understanding data to empower them.
- ▶ To unlock the next level(outreach to general public)to improve transparency and accountability for settling inflation expectations and effectiveness of monetary policy.
- ▶ To resolve diversified target audience issues using new channels and improve contents and forms of communication.
- ▶ Using plain language to engage the public at large.
- ▶ Web analytics services for a continuous assessment of communication initiatives.

# Where we are

- ▶ State Bank of Pakistan(SBP) established in July 01, 1948.
- ▶ Printing material and manual working since 1949 which includes data on real sector, monetary & financial sector, external sector collected, compiled and disseminated to relevant departments and stakeholders for communication and documentation.
- ▶ Before 2000s, Printing material, limited media use via Radio, TV and Newspapers were main medium of communication.
- ▶ SBP website developed in early 2000s. Use of smart computers, online/computerized data compilation and dissemination.
- ▶ Interaction with stakeholders of society started after 2005, including Business Firms, Households, economists and professionals.

# Where we are

- A. SBP on twitter: since 2015; 322.2K followers; 159 following
- B. Open up face book account on 23<sup>rd</sup> march 2018; 267k followers.
- C. Photos, videos, podcasts, events shared etc.
- D. Audience on Facebook and Twitter include Govt institutions, ministries, political parties, stock market, money and financial institutions, media persons and broadcast channels, news agencies, international organizations, individuals, business persons etc.
- E. Media and journalists trainings facilitation, talks in universities for monetary policy communication and interacting with firms and households through surveys to explore expectations successfully and continuously organized by SBP.

# Topics covered

- ▶ Daily exchange rate
- ▶ Monthly remittances
- ▶ Updates on currency
- ▶ Weekly foreign exchange reserves
- ▶ SBP podcasts on developments by SBP initiatives
- ▶ SBP news
- ▶ Advertisement to SBP products like Roshan digital accounts, saving schemes, etc.

# Current State of SBP Focus

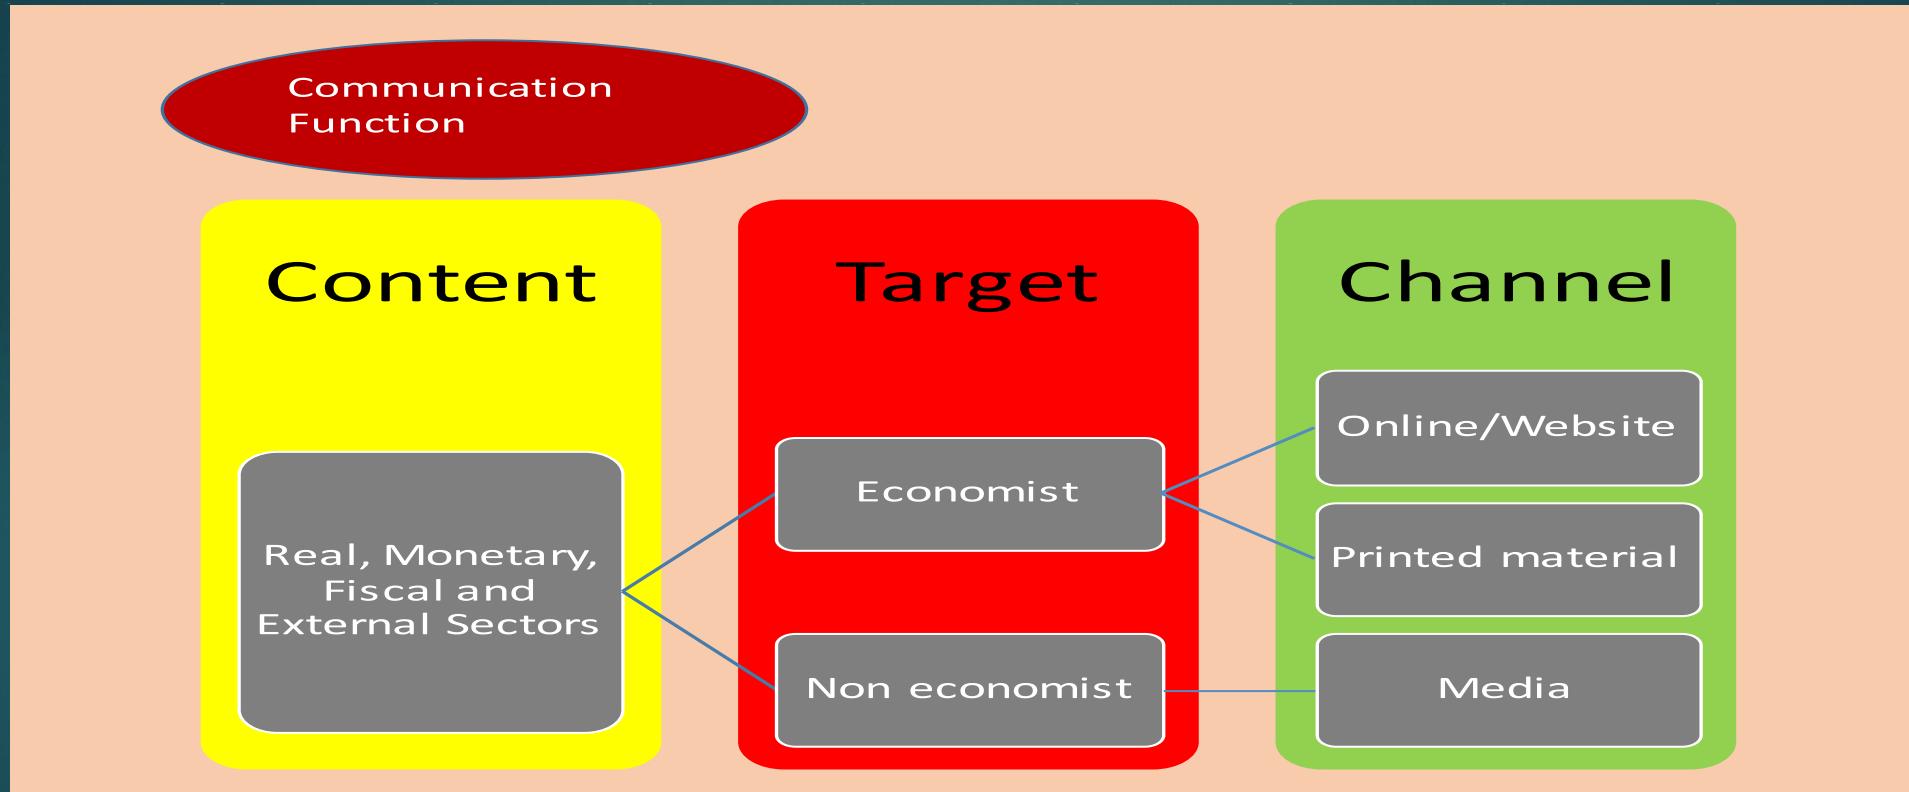

SBP is currently working on issues relating to;

- ▶ Passing on user friendly statistical terms and classifications.
- ▶ Exploring need based statistics through interacting with different sections of society. Households, businesses and professionals, Government etc.
- ▶ Consistent data designing to support the analysis for future.
- ▶ Working on social media network to engage public for central bank statistics.
- ▶ Podcasts, story telling and infographic as medium of communication

# Challenges

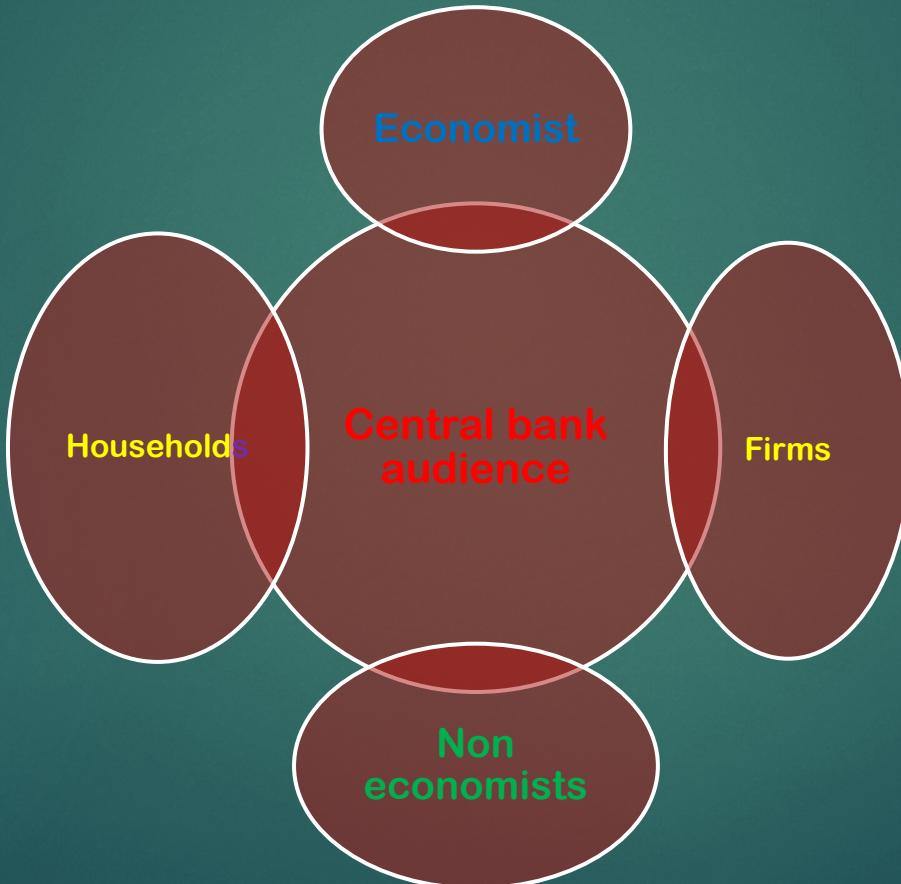

- ▶ Census of Population in Pakistan 2017-18 help determining challenges:
- ▶ The core challenge for central bank in Pakistan is to identify the target audience.
- ▶ 58.9 percent is the literacy rate.
- ▶ Only 45 % is involved in economic activity of age 15-64 years whereas rest of the audience 55 % is not involved in economic activity. So about 55% need more information relating to economy to capture employment and engage in economic activities.
- ▶ The economically active include 33 % worked worker, 3% seeking jobs, 12 students , 52 % housekeeping and others.
- ▶ Mobile phone(social media) and TV has the biggest outreach among public in Pakistan. The statistics produced by central banks is mostly on internet and computer or laptop which is hardly 13 % available to general public.
- ▶ Medium of communication in Pakistan is mostly English whereas Punjabi(40%), Pushto (18%), Sindhi (15%) and Urdu(8%) and others(19%) mother languages practiced. The statistical data dissemination is lacking AV aids based communication.
- ▶ Digitalization and financial inclusion.

# One Size Communication Tragedy:

Most of statistical information is for experts, semi experts and content based written document. Lacking verbal and visual communication, and ignoring general Public

# Central Bank Mixed Audience(Domestic & Foreign )

# Story of Communication Flow

# Profiling of Target Audience In Pakistan(need to do)

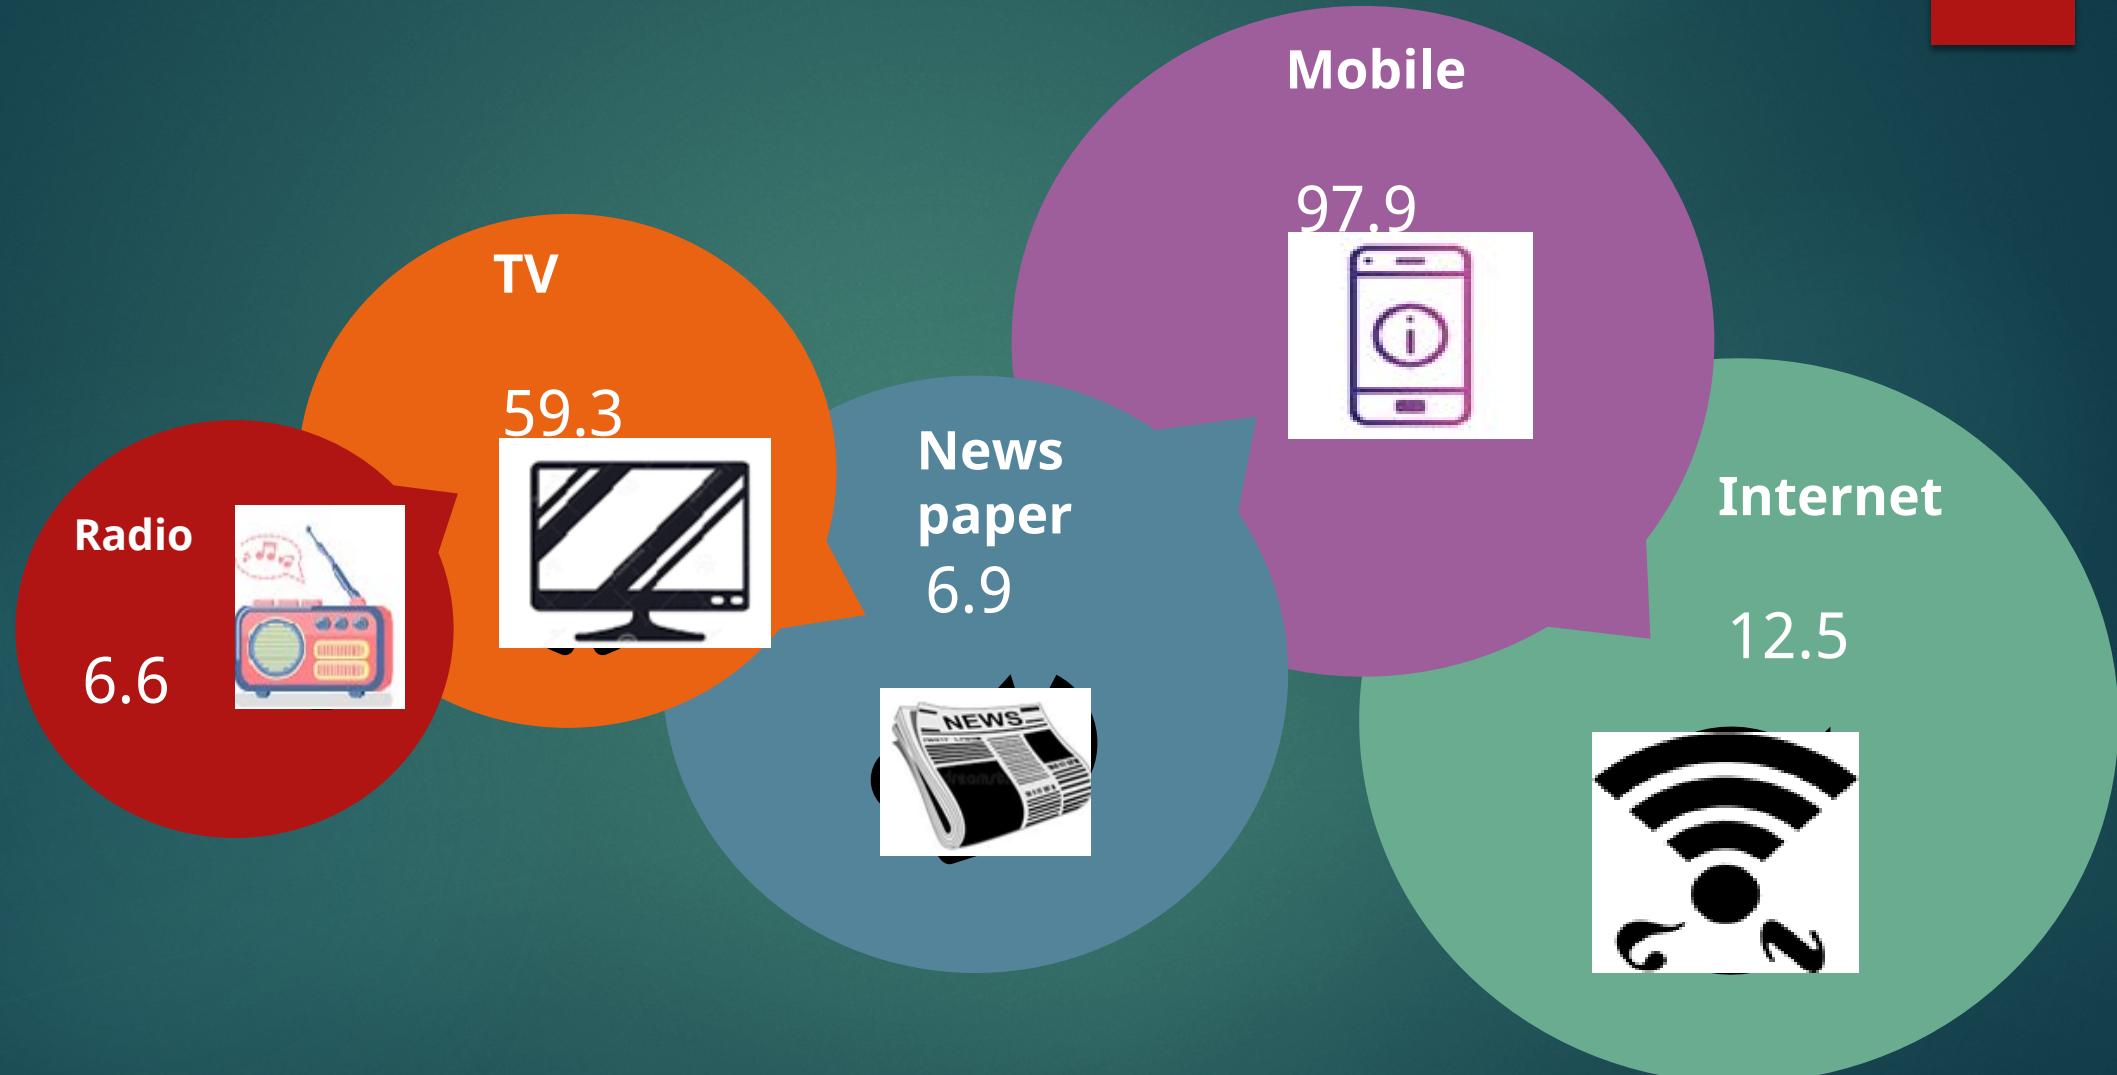

- ▶ It is important to know the profile of audience. Some features identified as:
- ▶ Education
- ▶ Gender
- ▶ Income
- ▶ Language
- ▶ Economic activity

# Favorable Population(15-64 yrs.) by usual activity: Census 2017-18

15-64 yrs. Consists of 33% worked, 52% house keeping& others and 11% students and 3% seeking work.

# Households with source of information in Pakistan(%)

# Level of Education attainment in Pakistan

**Age (yrs.): 15-44**  
82.4% population.

Middle & Secondary level constitute 71.9 %. This includes pre school to year 8(middle 41.3%) and year 9 to year 12(secondary 30.6%). Graduate class includes graduate & postgraduate and attained population is only 9.9 %.

Secondary

80  
%

Middle

Graduate

**Age (yrs.): 45-64**  
17.4 % population.

Middle & Secondary level constitute 15.2%. This includes middle 9.5% and Secondary 5.5%.

Graduate class includes only 2.4%.

Population ages 15-64 consists of middle 50.8%, Secondary 36.9% and Graduate 12.3%(census of Population 2017)

## PERCENTAGE DISTRIBUTION OF DAILY INCOME OF EMPLOYED PERSONS: HIES 2018-19

# What to Target

On the basis of diversified population statistics it can be inferred that:

1. One size(only content based) fit for all- likely only to have marginal impact.
2. We need to focus/aware on population of ages 15-44, having 71% up to secondary level education.
3. Mobile and TV as core medium of communication, used as cure for statistical dissemination.
4. 52 % population involved in housekeeping and related unproductive jobs, need information & awareness on economy.
5. About 90% population earning between 2-4 dollar daily including elementary occupation, crafts worker, machine & plant operator, services man, shop sales worker clerks etc.

# What We Planned

- I. Established data services and innovation department, it will mainly take on the dissemination and communication of statistics using modern methodology including Easy Data.
- II. Big Data, Artificial Intelligence and Machine Learning based data management initiatives and operations.
- III. *Tailored information to target concerned audience.*
- IV. Using plain language/national language through media for understanding statistical data.
- V. Two-way communication Workshops to address access- use and understanding.
- VI. focus on how different audiences create the relationship between readability and reasoning.

# Going Forward

- a. Process of Identifying Statistical and Communication Gaps and Needs. Survey of experts and audience is expected to be conducted for this purpose.
- b. Strengthening Capabilities and Interactions through User Group/Training Workshops, Seminars and Feedback Sessions.
- c. Deepening Media Engagement through different forms of communication like info graphs, visuals and story telling data dissemination.
- d. Real time data to minimize the gap between collection and dissemination, Geotag for monitoring, price tracker etc. are tools under way to enhance SBP communication.

## U.S. DEATHS NEAR 100,000, AN INCALCULABLE LOSS

They Were Not Simply  
Names on a List.  
They Were Us.

Numbers alone cannot possibly measure the impact of the coronavirus on America, whether it is the number of patients treated, jobs interrupted or lives cut short. As the country nears a grim milestone of 100,000 deaths attributed to the virus, The New York Times scoured obituaries and death notices of the victims. The 1,000 people here reflect just 1 percent of the toll. None were mere numbers.

**Patricia Dowd**, 57, San Jose, Calif., auditor in Silicon Valley • **Marion Krueger**, 85, Kirkland, Wash., great-grandmother with an easy laugh • **Jermaine Ferro**, 77, Lee County, Fla., wife with little time to enjoy a new marriage • **Cornelius Lawyer**, 84, Bellevue, Wash., sharecropper's son • **Loretta Mendoza Dionisio**, 68, Los Angeles, cancer survivor born in the Phil-

real jokester • **Michael Sorkin**, 71, New York City, champion of social justice through architecture • **George Valentine**, 66, Washington, D.C., lawyer who mentored others • **James Quigley**, 77, Chicago, rebel of the family • **Sherman Pittman**, 61, Chicago, dedicated his life to his church and his neighborhood • **Susan McPherson Gottstein**, 74, Palm Beach, Fla., loyal and generous friend to many • **Andreas Koutsoudakis**, 59, New York City, trailblazer for TriBeCa • **Bob Barnum**, 64, St. Petersburg, Fla., leader in Florida Pride events • **Noel Sinkiat**, 64, Olney, Md., nurse planning for retirement • **Thomas E. Anglin**, 85, Cumming, Ga., created many wonderful memories for his family • **Robert Manley Argo Jr.**, 75, South Bay, Calif., member of Del Amo Flyers • **Michael McKinnell**, 84, Beverly, Mass., architect of Boston's monumental City Hall • **Huguette Dorsey**, 94, Somerville, N.J., coached several championship-winning junior high girls basketball teams • **Lynne Sierra**, 68, Roselle, Ill., grandmother who was always full of ideas • **Louvenia Henderson**, 44, Tonawanda, N.Y., proud single mother of three • **Carol Sue Rubin**, 69, West Bloomfield, Mich., loved travel, mahjong and crossword

jazz trumpet virtuoso • **Cristina**, 64, New York City, downtown New York singer with a cult following • **Robert H. Westphal**, 75, Fond du Lac, Wis., statesman in the construction industry • **Clair Dunlap**, 89, Washington, pilot still teaching people to fly at 88 • **Marylou Armer**, 43, Sonoma Valley, Calif., veteran police detective • **Regina D. Cullen**, 81, Shrewsbury, Mass., small in stature but strong in spirit • **Sandra Santos-Vizcaino**, 54, New York City, beloved public school teacher • **Frank Gabrin**, 60, New York City, emergency room doctor who died in husband's arms • **Sterling E. Matthews**, 60, Midlothian, Va., cancer survivor who served as a deacon • **Alby Kass**, 89, California, lead singer of a Yiddish folk group • **Roger Eckart**, 78, Indiana, retired firefighter and old-school barber • **Martin Douglas**, 71, New York City, maestro of a steel-pan band • **Daniel Spector**, 68, Memphis, mentor to other Memphis artists • **Mary Minervini**, 91, Oak Lawn, Ill., sign-language interpreter • **Salomon S. Podgursky**, 84, Morristown, N.J., loved to figure out how things worked • **Dale E. Thurman**, 65, Lexington, Ky., tailor known for his exacting work and strong opinions • **Ellis Marsalis**, 85, New Orleans,

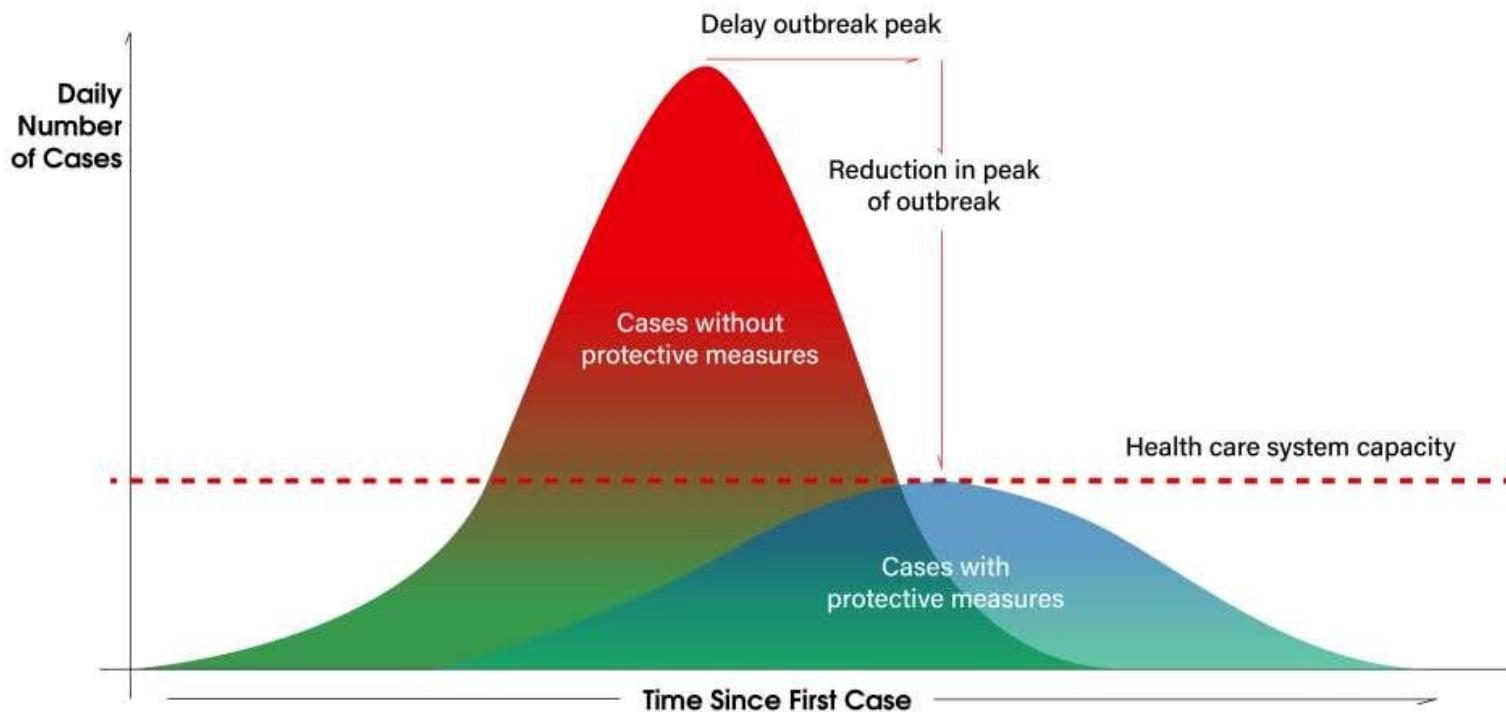

Bailargeon, 72, Dennisport, Mass., true outdoorsman • **Viraf Darukhanawala**, 77, Hoffman Estates, Ill., worker at O'Hare International Airport • **Chester Dwulet**, 68, Burlington, Mass., proud Union ironworker of Local 7 for 45 years • **John Timothy Barr**, 76, Rochester Hills, Mich., trustee for the Retired Detroit Police and Firefighters Association • **Julie Butler**, 62, New York City, veterinarian who served Harlem • **Lila A. Fenwick**, 87, New York City, first black woman to graduate from Harvard Law School • **Vincent Lioni**, 60, New York City, Met Opera violinist and youth orchestra conductor • **Ann Youngerman Smoler**, 87, New York City, had a passion for social justice • **Thomas Waters**, 56, New York City, armed the affordable housing movement with data and analysis • **Luke Workoff**, 33, Huntington, N.Y., his relentless passion was for his family and friends • **José Diaz-Ayala**, 38, Palm Beach, Fla., served with the Palm Beach County Sheriff's Office for 14 years • **Antonio Nieves**, 73, Chicago, always seemed to be busy with some home project • **Jeanne Hammond Byrnes**, 97, Danbury, Conn., received numerous awards for her accounting skills • **Alice Coopersmith**

spirit • **Jack Butler**, 78, Indiana, lived in the house he grew up in • **Susan Grey Hopp Crofoot**, 97, Westwood, N.J., took great joy in writing little ditties under her pen name, Penelope Penwiper • **James David Gewirtzman**, 72, New City, N.Y., spent some of his happiest hours hiking in the Adirondacks • **Henry F. Graff**, 98, Greenwich, Conn., Columbia University historian of U.S. presidents • **Mari Jo Davitto**, 82, Thornton, Ill., people were her hobby • **Yaakov Perlow**, 89, New York City, leader of the Novominsker Hasidic dynasty • **Joseph F. Kelly**, 81, New York City, did two tours through the Panama Canal to Antarctica • **John Prine**, 73, Nashville, country-folk singer who was a favorite of Bob Dylan • **Perry Buchalter**, 63, Florida, quiet hero • **Monica Maley**, 74, Rehoboth Beach, Del., loved animals, had dogs and cats, and rode horses • **Thomas Tarbell Russell**, 83, Longmeadow, Mass., mentored by the computer science pioneer Grace Hopper • **Ruth Skapinoff**, 85, Roseville, Calif., backyard birds were known to eat from her hand • **Faraly Havir**, 92, Minnesota, her favorite thing was meeting new people • **Torrin Jamal Howard**, 26, Waterbury, Conn., gentle giant, athlete and musician

II, 69, Fremont, Ohio, known throughout Ohio for his knowledge of local history • **Harley E. Acker**, 79, Troupsburg, N.Y., discovered his true calling when he started driving a school bus • **Arabella Rawls**, 81, Chicago, caretaker of her neighborhood • **Roger Liddell**, 65, Flint, Mich., brought smiles to everyone he interacted with • **Luther Coleman**, 108, Evergreen Park, Ill., man who seemed to know everything • **Denise Camille Buczek**, 72, Bristol, Conn., loved writing birthday and holiday cards, poems and lists • **Charles Constantino**, 86, Menlo Park, N.J., worked 40 years for The New York Times • **Ben Doherty**, 83, Boston, stockbroker who founded Doherty Financial Services • **John Horton Conway**, 82, New Brunswick, N.J., mathematician known as the "magical genius" • **Stanley Chera**, 77, New York City, developer and friend of the president • **Robert Browne**, 72, New York City, Realtor and philanthropist who socialized with celebrities • **Wynn Handman**, 97, New York City, acting teacher and a founder of the American Place Theater • **Adam Kovacs**, 72, New York City, cartoonist and an expert on musicals • **Peter Brown**, 53, New Jersey, manager of the S.W. Brown & Son Funeral

Transforming numbers into  
narratives is becoming part of  
every leader's job.

## Valet API

The Bank of Canada Valet Web Services offers programmatic access to global financial data. By using the Valet API, you can retrieve financial data and information from the Bank of Canada — such as daily exchange rates of the Canadian dollar against the European euro.

### Formats

We provide data in JSON, XML, and CSV formats.

### Routes

The Valet API offers these routes:

- [Lists](#)
- [Series](#)
- [Series Groups](#)
- [Observations by Series](#)
- [Observations by Series Group](#)
- [Foreign Exchange Rates in RSS](#)

The Base URL of each route is as follows:

<https://www.bankofcanada.ca/valet>

All routes shown below

- must be prefixed by the Base URL
- require at least one `seriesNames`, `groupName` or `listName` — but the `format` and `query` parameters of these routes are optional

### Formats

A `format` is the file extension of a response returned by Valet. Valet can return data in JSON, XML, and CSV formats. The default is JSON. The format is specified by adding a file extension to the end of the request path.

</observations/seriesNames/format>

Example query:

</observations/FXCADUSD/json>

[/observations/group/FX\\_RATES\\_DAILY/xml](/observations/group/FX_RATES_DAILY/xml)

[https://www.bankofcanada.ca/valet/docs#valet\\_api](https://www.bankofcanada.ca/valet/docs#valet_api)

JSON XML CSV

#### Example JSON Response (Formats):

```

# Introduction

The Bank of Canada Design System is a “just enough documentation” approach to capturing the patterns and standards of our web framework. It’s an iterative, collaborative resource intended to help scale the Bank’s digitalization efforts.

In this system:

- **Design**—patterns for colour, typography, and layout
- **Components**—usage notes for buttons, banners, and other reusable elements
- **Charts**—standards for choosing and implementing charts
- **Accessibility guidelines**

## Content

We’ve embedded content guidance directly into the documentation for this design system. We believe that content and design are symbiotic and inseparable, so we’re taking an integrated approach to documenting them just as we do with implementing them.

That said, we’ve also included our [guiding principles for content](#).

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## A snapshot on Bank of Albania communication approach and financial literacy<sup>1</sup>

Argita Frashëri and Elona Dushku,  
Bank of Albania

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# A snapshot on Bank of Albania communication approach and Financial literacy

Argita Frashëri, Elona Dushku  
Bank of Albania

Communication on central bank statistics: unlocking the next level-Joint Irving Fisher Committee and Banco de Portugal Conference

19-20 September, 2022

The views expressed in this presentation are those of the authors and do not necessarily reflect the views or the opinions of the Bank of Albania.

# Outline

- Central bank communication revolution
- How and what BoA communicate
- Some evidence of financial literacy in Albania
- Final remarks

# I. Central bank communication revolution in thinking and practice

- Central bank communication is considered a core part of monetary policy toolkit due to influence on the expectations of markets participants, firms and consumers. As a result, many central banks have become remarkably more transparent over the past 15 years and have started placing much greater weight on their communications.
- Evolution in central banking, combine with high uncertainty caused by global financial crisis, Covid-19 and Ukraine war have embarked central banks on another journey, largely unexplored. This new road leads to a different audience, namely as non-experts (Gardt et al.(2021)).
- Reaching out to non-experts raises a number of challenges. Blinder (2018) stress that “central banks will keep trying to communicate with the general public, as they should. But for the most part, they will fail.”
- Generally no-experts know less about central banks, might not be in reach, and will not necessarily respond as fast and visibly to central bank messages. Haldane et al. (2020) emphasize that central bank communication with the public need more “explanation, engagement and education” than experts.

## II. Bank of Albania Monetary policy framework

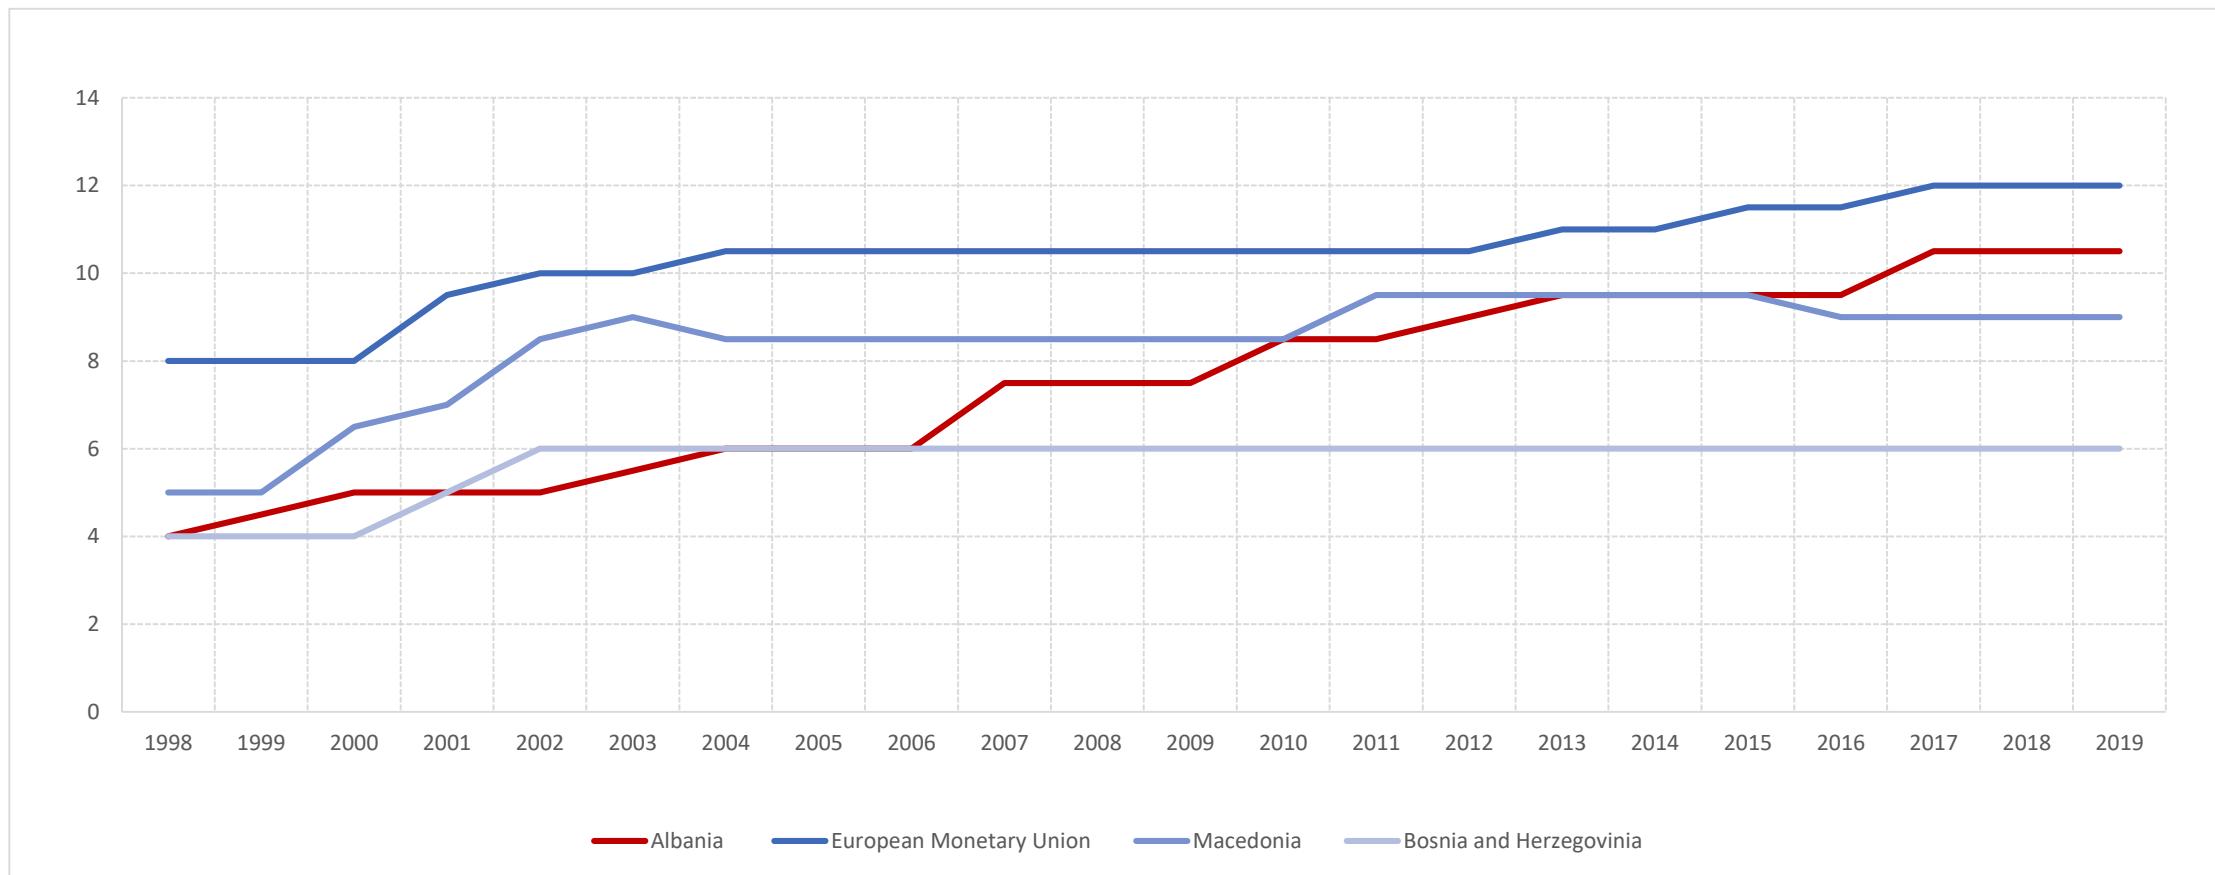

- *Monetary policy framework*
  - In 1992 establishment of Bank of Albania, new law of 1996 fulfill and the marked a noticeable improvement in legal and institutional framework of central bank as an independent authority.
  - The subsequent law of 1997, amended in 2002 and still in force today, further clarified the objective of monetary policy by specifically defining its goal as “... to achieve and maintain price stability.”
  - From 1992-2008, Monetary targeting regime (Themeli, 2010)
  - Since 2009, Inflation targeting framework
    - Independence
    - Accountability
    - Transparency
- *Monetary policy communication approach*
  - Initially and important step was the publication of a mid-term strategy of BoA presenting its vision, monetary policy strategy, objectives and instruments
  - In following years, transparency and communication with the public became a core part of monetary toolkit.
    - Periodic publication of the Monetary Policy Document
    - Immediate publication of monetary policy decision followed by live press conference of the governor.
    - Constant improvement of monetary policy reports, inflation analysis, and forecasting process.
    - BoA's assessment about current and future economic developments, their impact in inflation, future stance of monetary policy

## II. How and what BoA communicate

Periodical publications	Research Publication	Surveys	Educational publications	Specific publications
<ul style="list-style-type: none"><li>• Annual report</li><li>• Monetary policy report (quarterly)</li><li>• Monetary policy</li><li>• Financial Stability report (semiannual)</li><li>• Annual supervision report</li><li>• Monthly statistical report</li><li>• Central bank highlight, news and events (semiannual)</li></ul>	<ul style="list-style-type: none"><li>• Economic review</li><li>• Research newsletter</li><li>• Research papers</li><li>• Conference book series</li></ul>	<ul style="list-style-type: none"><li>• Business and consumer confidence survey</li><li>• Lending standard survey</li><li>• Financial situation and borrowing of households and enterprises</li><li>• Real estate market and residential price index</li><li>• Household wealth survey</li></ul>	<ul style="list-style-type: none"><li>• Central bank</li><li>• Education of personal finance</li><li>• Others</li></ul>	<ul style="list-style-type: none"><li>• Medium-term development strategy of Bank of Albania</li><li>• Governor public appearance (annually)</li></ul>

## II. Evolution of central bank transparency index

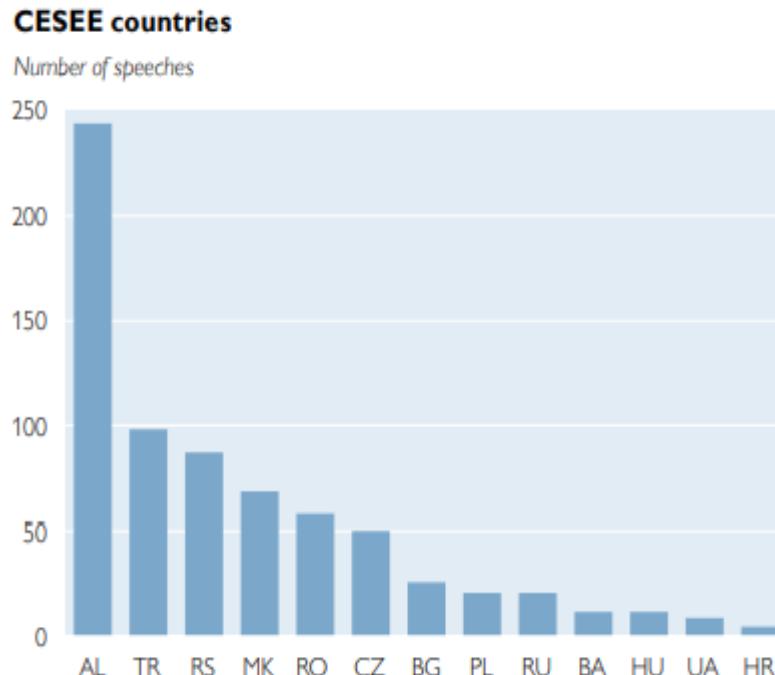

Graph 1: Evolution of BoA transparency index

Source: Dincer, Eichengree & Geraats (2022)

## II. What do central bank talk about? A European perspective on central bank communication (Feldkircher et al, (2021)).

Graph 2: Number of speeches from 1997-2019

Source: Feldkircher et al (2021), FEEI, Q2\_21

Graph 3: Main topics in central bank speeches

Topic 1-European integration   Topic 2- Monetary policy   Topic 3-Financial stability   Topic 4-Outside box

**Topic prevalence in central bank speeches by CESEE country**

Country	Topic 1	Topic 2	Topic 3	Topic 4
Albania	0.10	0.13	<b>0.28</b>	0.22
Bosnia and Herzegovina	0.28	0.05	<b>0.30</b>	0.26
Bulgaria	0.26	0.05	<b>0.40</b>	0.25
Croatia	0.31	0.11	0.09	<b>0.35</b>
Czechia	0.21	0.15	0.14	<b>0.43</b>
Hungary	<b>0.23</b>	0.18	0.19	0.23
North Macedonia	0.19	0.10	0.25	<b>0.29</b>
Poland	0.17	0.13	0.09	<b>0.39</b>
Romania	<b>0.31</b>	0.10	0.15	0.30
Russia	0.04	0.13	<b>0.27</b>	0.13
Serbia	0.15	0.08	0.20	<b>0.29</b>
Ukraine	0.04	0.17	0.11	<b>0.33</b>
Turkey	0.10	<b>0.25</b>	0.21	0.12

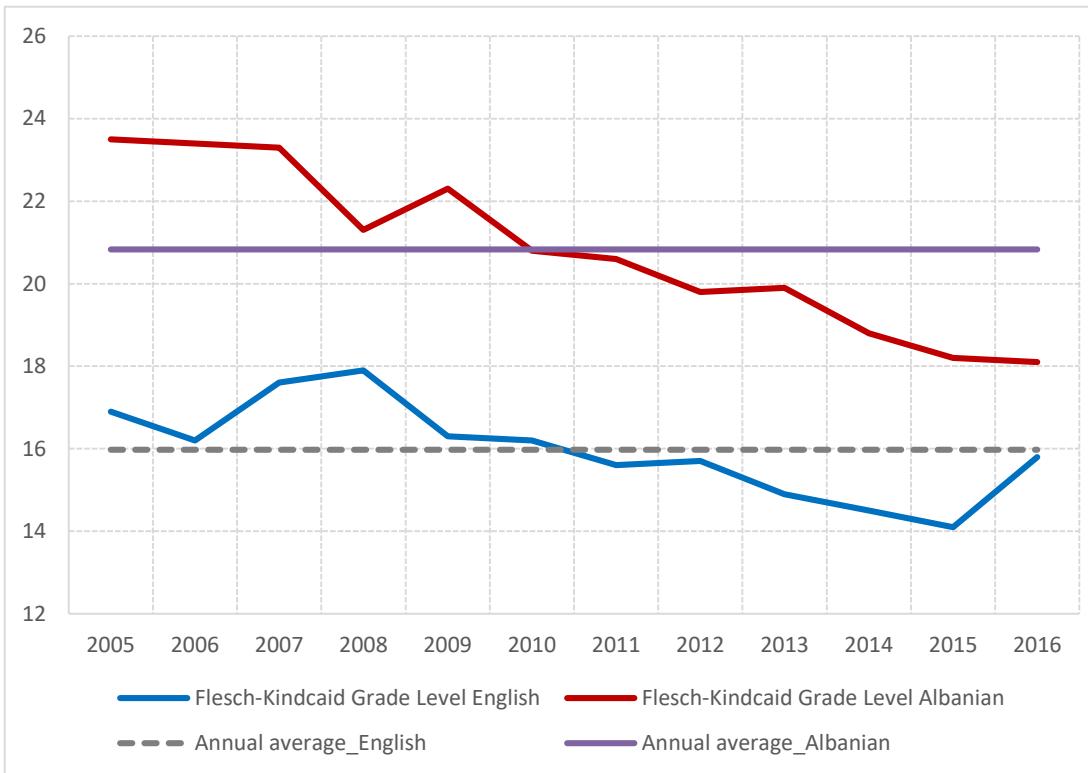

Source: Authors' calculations.

Note: The table shows the probability of topic assignment ( $\theta$ ), averaged over documents per central bank. The highest mean probability per central bank is marked in bold.

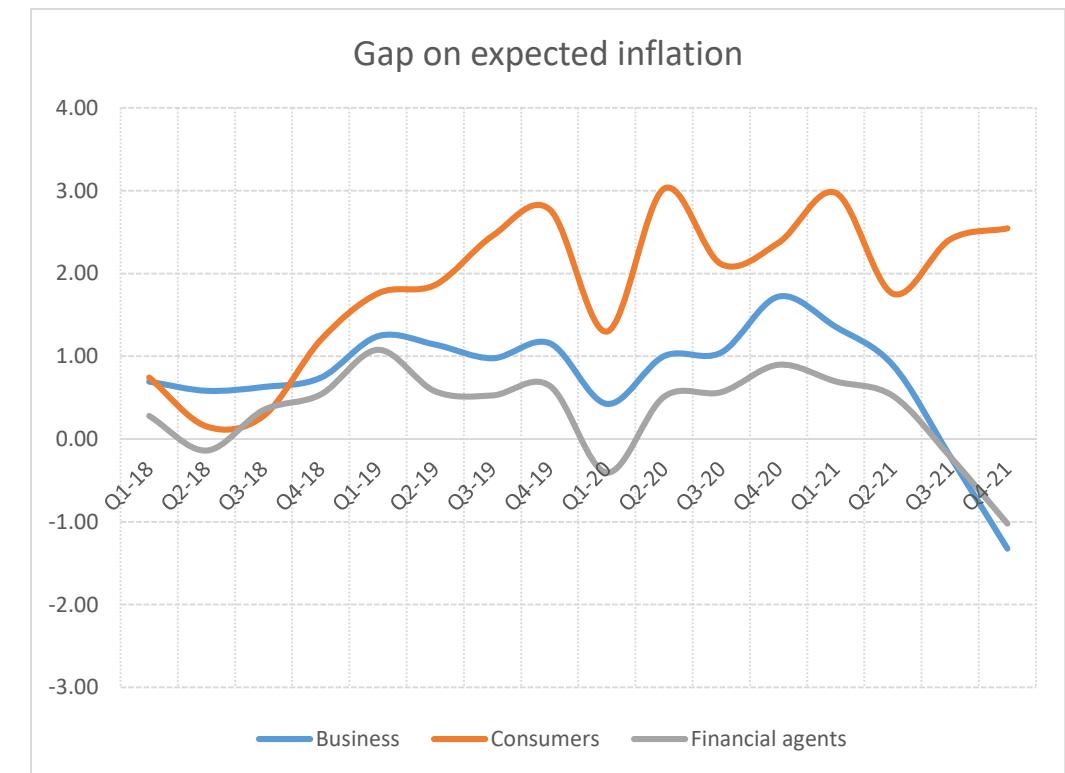

Source: Feldkircher et al (2021), FEEI, Q2\_21

## II. Readability of BoA speeches and inflation expectation gap

Graph 4: Flesch-Kindcaid Grade Level English and Albanian from 2005-2016

Graph 5: Expected inflation rates over next 12 months

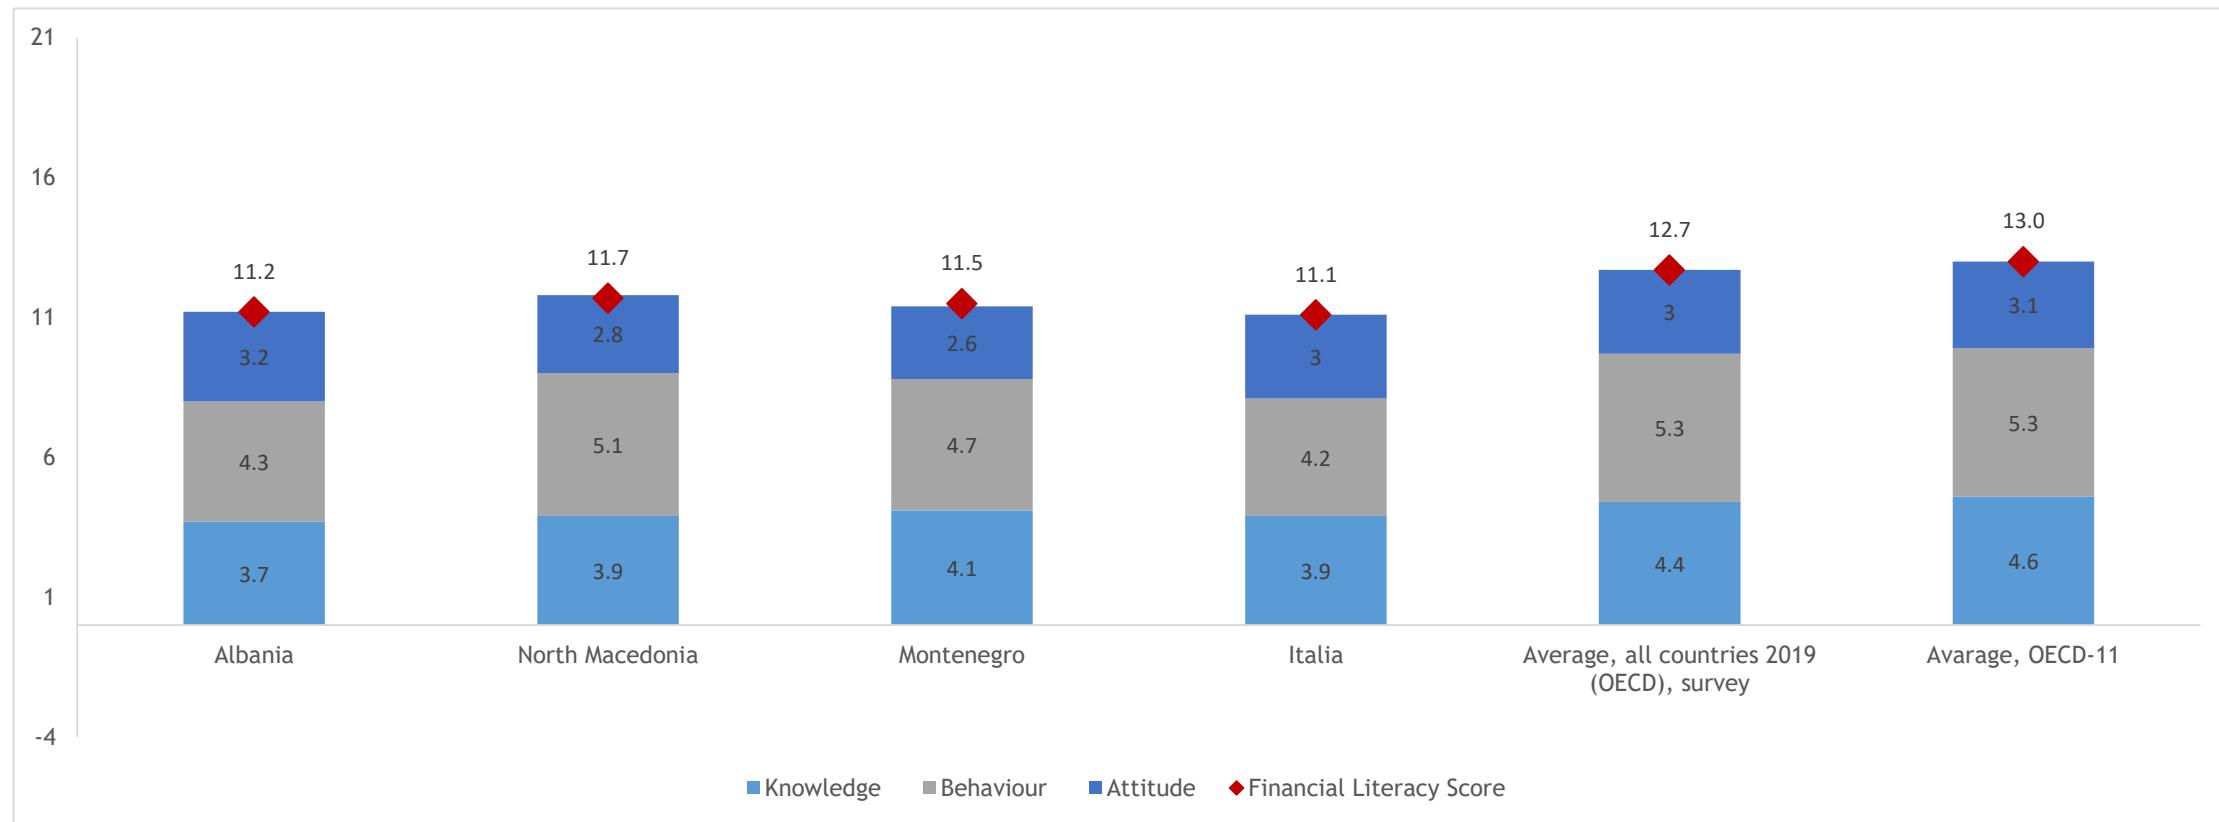

Source: Çeliku (2017),

- Çeliku (2017) estimate a downward level of Flech-Kindcaid Grade level showing that the readability of BoA speeches has improved over time, but we need to do more.
- In addition, BoA communication strategy needs to account heterogeneity of inflation expectations and low level of financial literacy.

Source: Bank of Albania

### III. Financial literacy in Albania: Results of 2019 survey

Graph 6: Financial literacy score, 2019

Source: OECD(2020), Dushku (2022)

- Financial literacy index in Albania is 11.2 out 21 (max), lower than the average of the countries in 2019.
- Individuals in Albania have only 53% financial knowledge, behavior and attitudes, comparing to average level of all countries, which is 61 %.

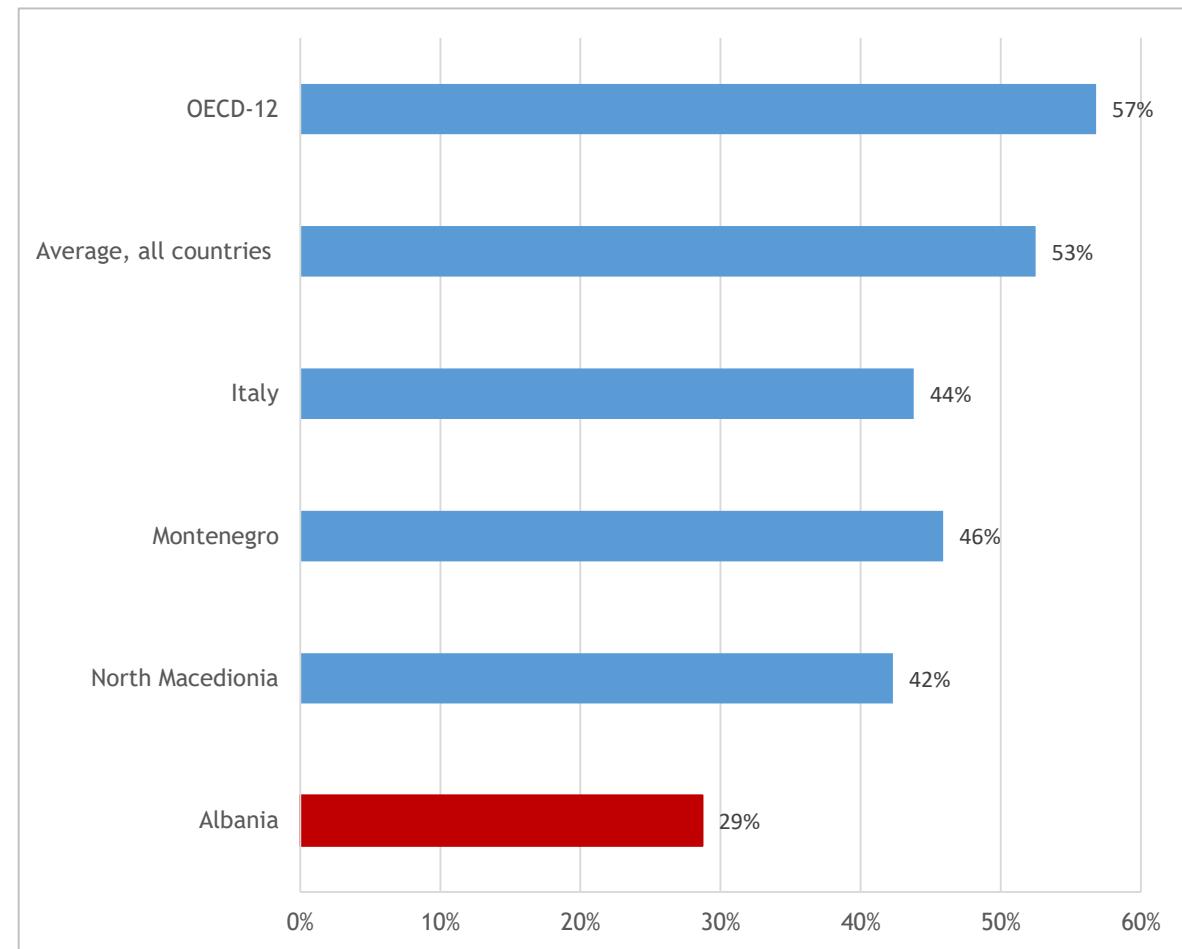

### III. Financial literacy in Albania: Results of 2019 survey: Financial knowledge

Table 1: Percentage of adults that give correct answer

Financial knowledge questions	Albania	North Macedonia	Montenegro	Italy	Average of all countries	Average of OECD-OCDE/IN 12 FE survey
Time value of money, impact of inflation	25.90%	60.80%	61.40%	50.50%	65.50%	59.90%
Interest paid on a loan	83.70%	72.90%	87.40%	78.20%	87.40%	84.40%
Simple interest calculation	46.40%	44.80%	65.80%	59.40%	57.20%	57.10%
Understanding compound interest	10.50%	12.30%	13.90%	23.10%	28.80%	26.30%
Understanding risk and return	74.30%	68.60%	75.90%	64.70%	79.00%	77.10%
Understanding the definition of inflation	69.30%	78.20%	70.40%	65.10%	80.90%	78.00%
Understanding risk diversification	61.10%	55.10%	35.90%	51.30%	63.30%	58.90%

Source: OECD(2020), Dushku (2022)

Graph 7: Minimum target score on financial knowledge-Percentage of adults scoring 5 or more (out of 7)

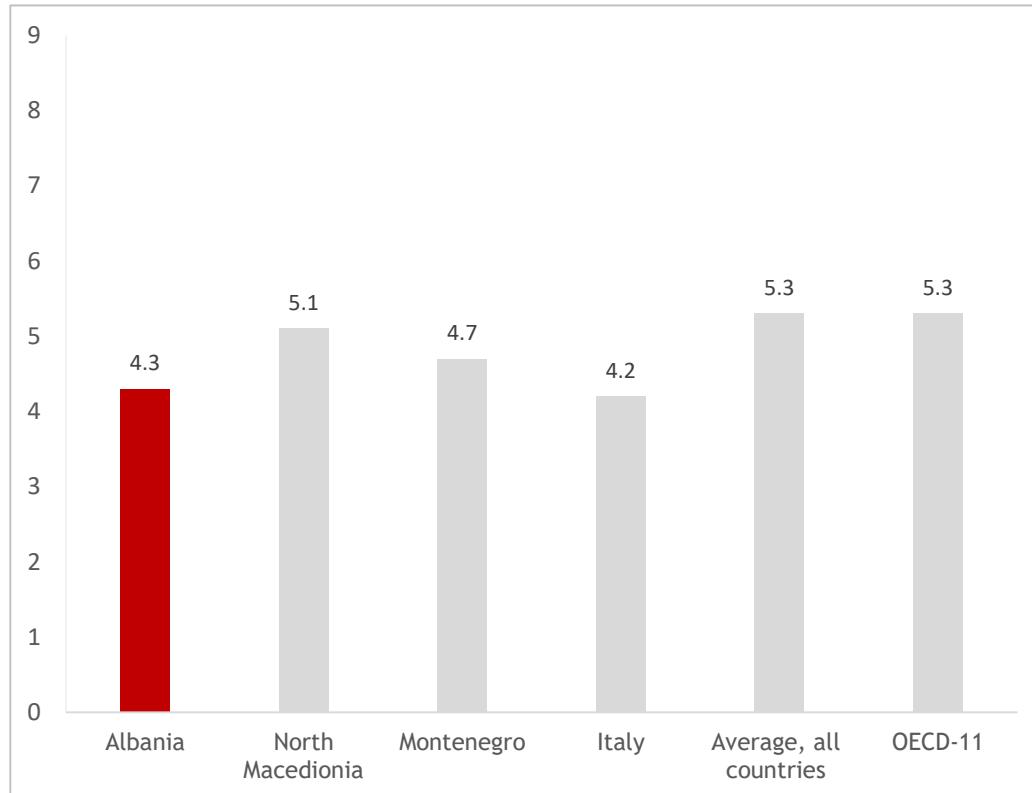

Source: OECD(2020), Dushku (2022)

- Lack of financial knowledge on the questions related to time value of Money, simple and compound interest calculation.
- 29% of individuals in Albania hold the minimum level of financial knowledge, low comparing with the average of OECD-12 and all countries ( 53-57 % )

### III. Financial literacy in Albania: Results of 2019 survey

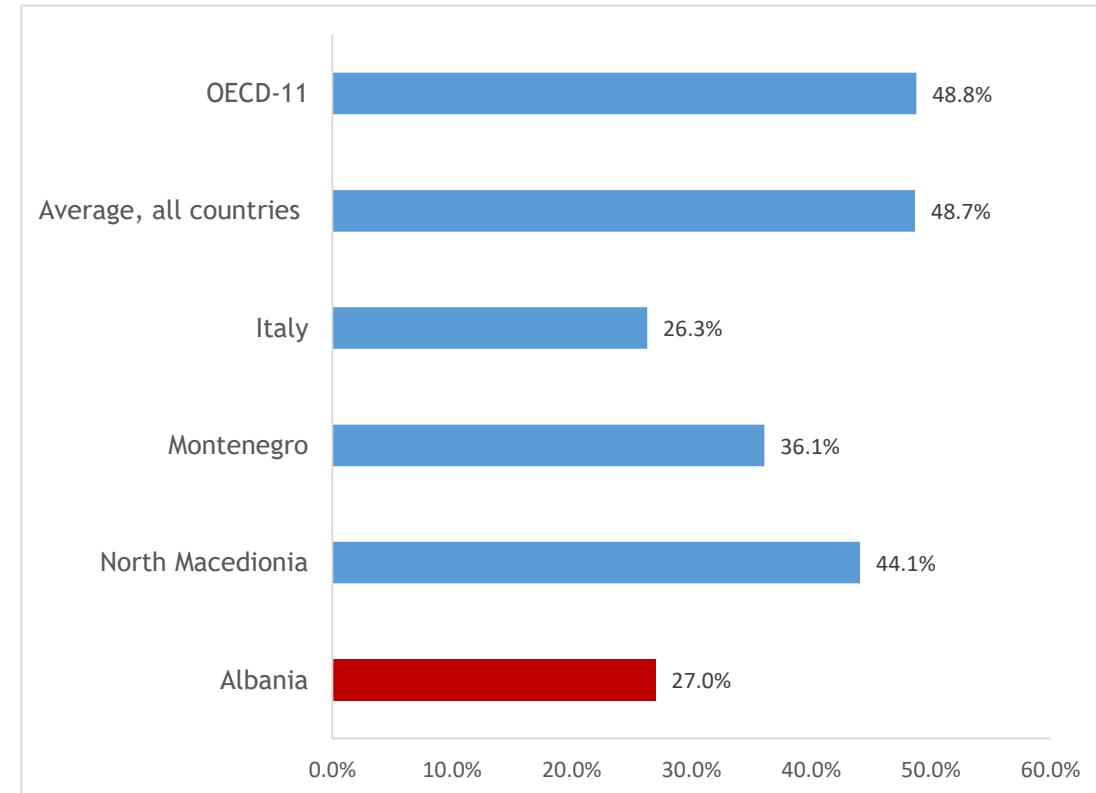

Financial behavior derived as a measure of prudent, long term, savings-oriented behaviors towards money.

Graph 8: Financial behavior score

Source: OECD(2020), Dushku (2022)

Graph 9: Minimum target score on financial behavior: Percentage of responses who achieved 6 or above ( out of 9)

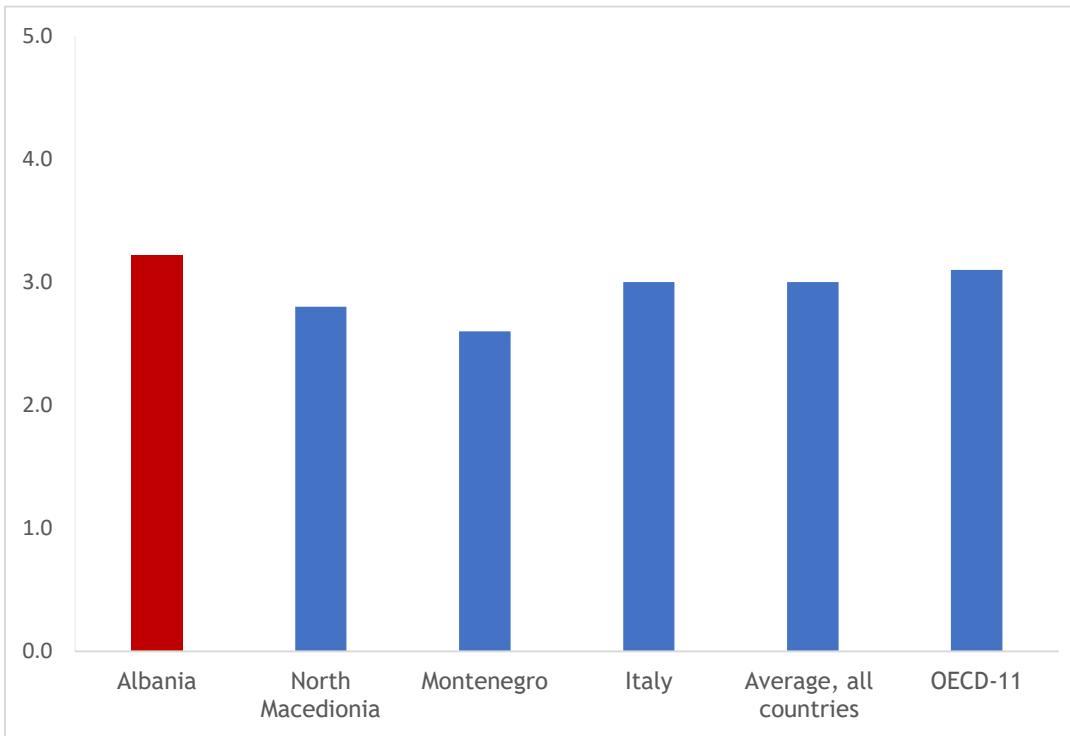

Source: OECD(2020), Dushku (2022)

- Financial behavior score in Albania is 4.3 ( out of 9) lower than world or OECD-11 average
- Only 27 % of adults in Albania were able to achieve the minimum target score of 6 or more.

### III. Financial literacy in Albania: Results of 2019 survey:

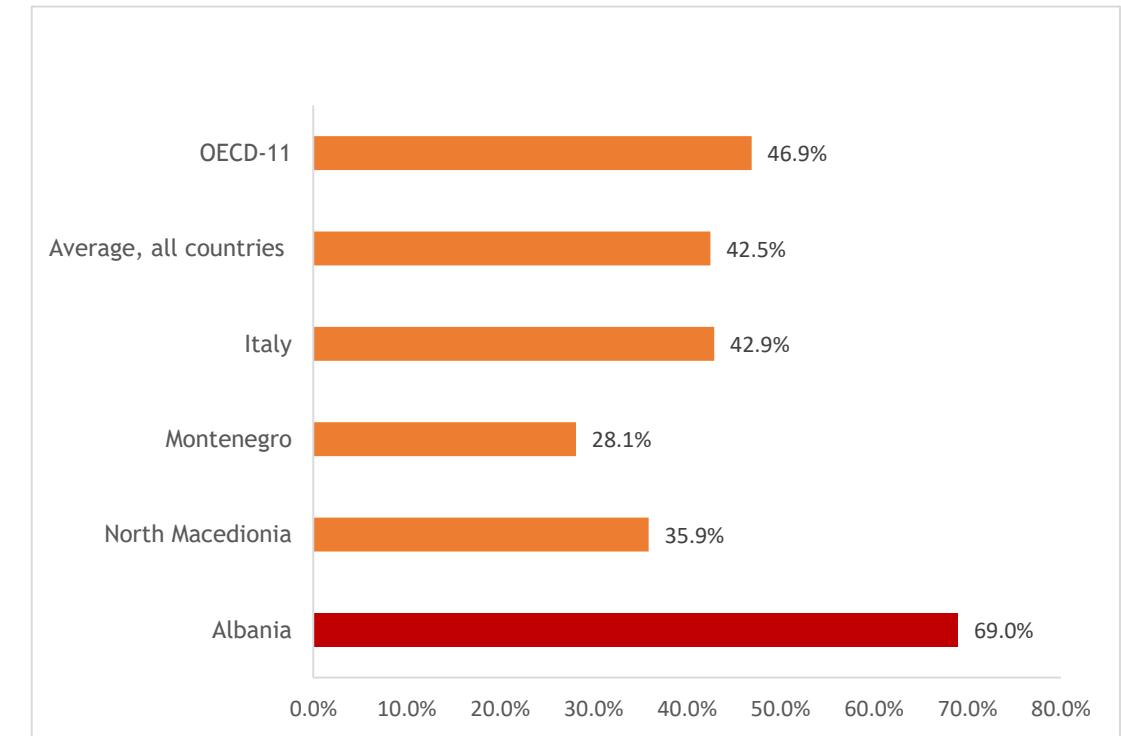

Financial attitude is based on the respondents' attitudes towards money and planning for the future

Graph 10: Financial attitude score

Source: OECD(2020), Dushku (2022)

Graph 11: Percentage of responses who give correct answer on financial attitude

Source: OECD(2020), Dushku (2022)

- Financial attitude score in Albania is 3.2 a little higher than average index of all countries.
- 70 % of adults in Albania were able to achieve the minimum target score of over 3 (out of 5).

### III. Financial literacy in Albania: Results of 2019 survey:

Table 2: Percentage of individuals with minimum financial knowledge, behavior and attitude based on socio-demographic characteristics in Albania

		Percentage of individuals with minimum financial knowledge	Percentage of individuals with minimum financial behavior	Percentage of individuals with minimum financial attitude
<b>Total</b>		28.7%	27%	56.2 %
<b>Gender</b>	Women	23.4%	23%	60.1%
	Men	34.2%	31%	52.2%
<b>Age</b>	18-29 years	34.9%	24%	42.6%
	30-59 years	31.9%	32%	61.2%
	60-79 years	17.4%	18%	58.4%
<b>Area</b>	Urban	28.2%	32%	51.5%
	Rural	29.2%	21%	61.1%
<b>Education</b>	Tertiary level	46.5%	48%	49.5%
	Secondary level	31.7%	31%	53.0%
	Basic level	16.6%	11%	63.1%
	No education	0.0%	0%	56.0%
<b>Employment status</b>	Self-employed	38.1%	41%	60.7%
	Employed	38.3%	47%	52.3%
	Student	54.3%	18%	34.9%
	House person, economically inactive	16.9%	17%	65.0%
	Unemployed	20.6%	5%	50.0%
	Incapable for work	16.7%	14%	59.0%
<b>Income level</b>	Low level	21.7%	14%	58.7%
	Medium level	34.1%	35%	55.0%
	High level	41.5%	56%	50.4%

- Most vulnerable groups of individuals in terms of financial literacy are: women, youth, elderly, and individuals with low levels of education, unemployed, housewives, low-income individuals and individuals living in rural areas.

## V. Final Remarks

- Communication approach of Bank of Albania has been improved over time but low level of financial literacy in Albania still remain an issue for the effectiveness of monetary policy.
- Furthermore, data show high heterogeneity between groups in terms of financial literacy (youngest, women, students, unemployed, poorest individuals have low level of financial score) and inflation expectations.
- Strengthening financial literacy is crucial for Bank of Albania communication strategy, in helping markets anticipate monetary policy and reducing market uncertainty.
- Bank of Albania with World Bank has started to work for implementing a Albania National Financial Education Strategy, where the aim is to increase financial literacy of Albanians, as result to improve their financial well-being and resilience to unexpected events.

# Thank you!

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## How to tailor information resources to a target audience – Lessons learned from a Research Data Centre<sup>1</sup>

Jannick Blaschke,  
Deutsche Bundesbank

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# How to tailor information resources to a target audience – Lessons learned from a Research Data Centre

Jannick Blaschke, Deutsche Bundesbank, Research Data and Service Centre

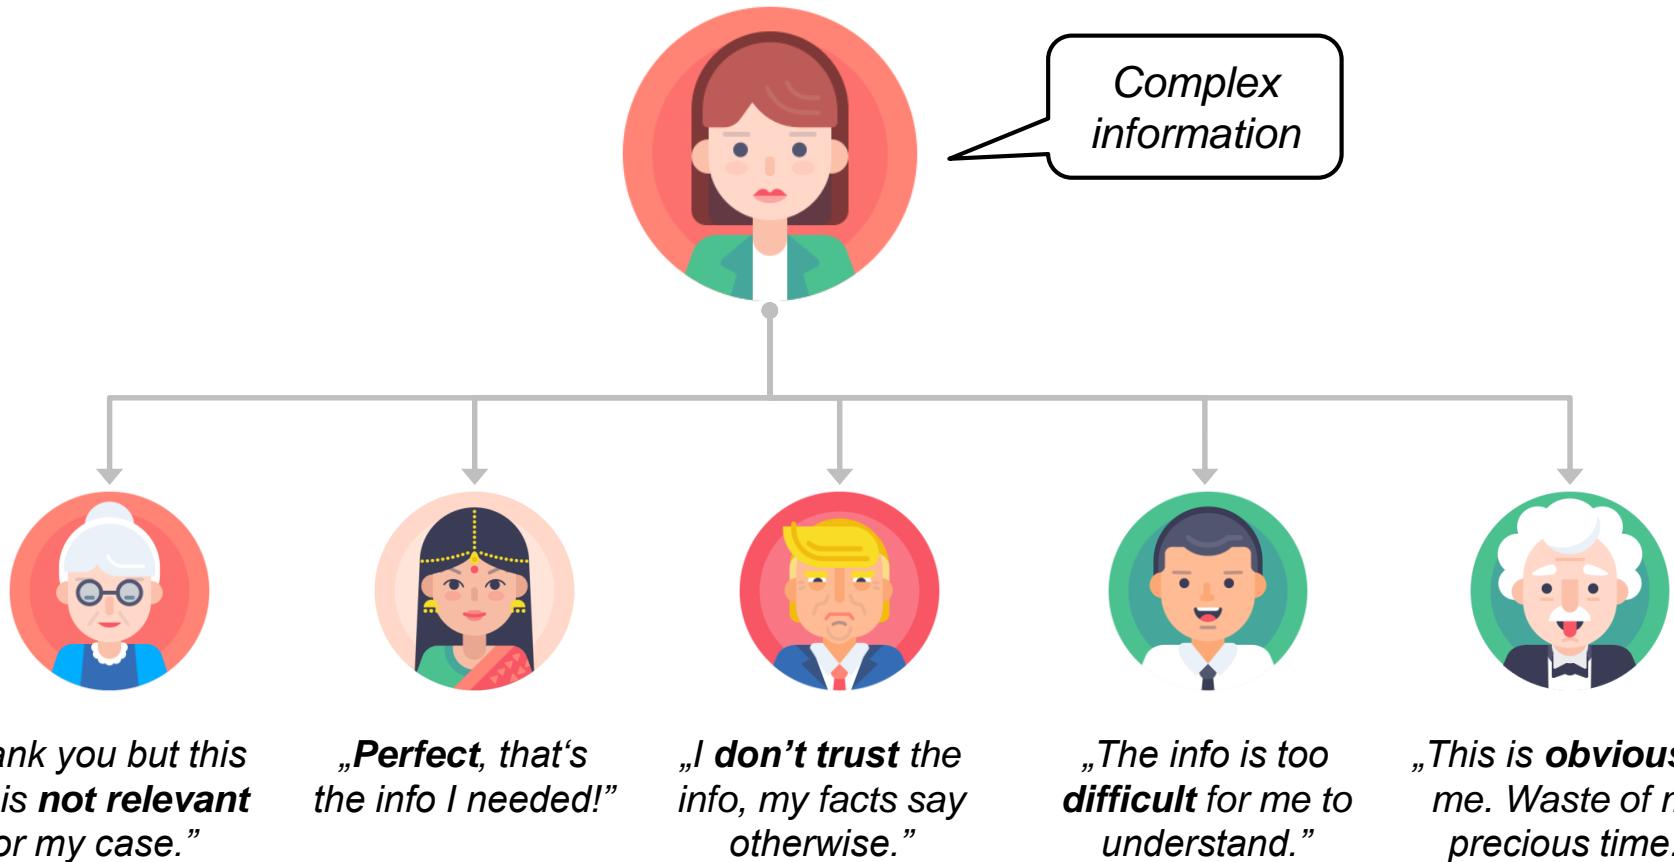

## Session 2 | Unlocking new targets

Joint Irving Fisher Committee and Banco de Portugal conference on  
“Communication on central bank statistics: unlocking the next level”  
held at 19 and 20 September 2022, Lisbon

The views expressed here do not necessarily reflect the opinion of the  
Deutsche Bundesbank, the INEXDA network or the Eurosystem.

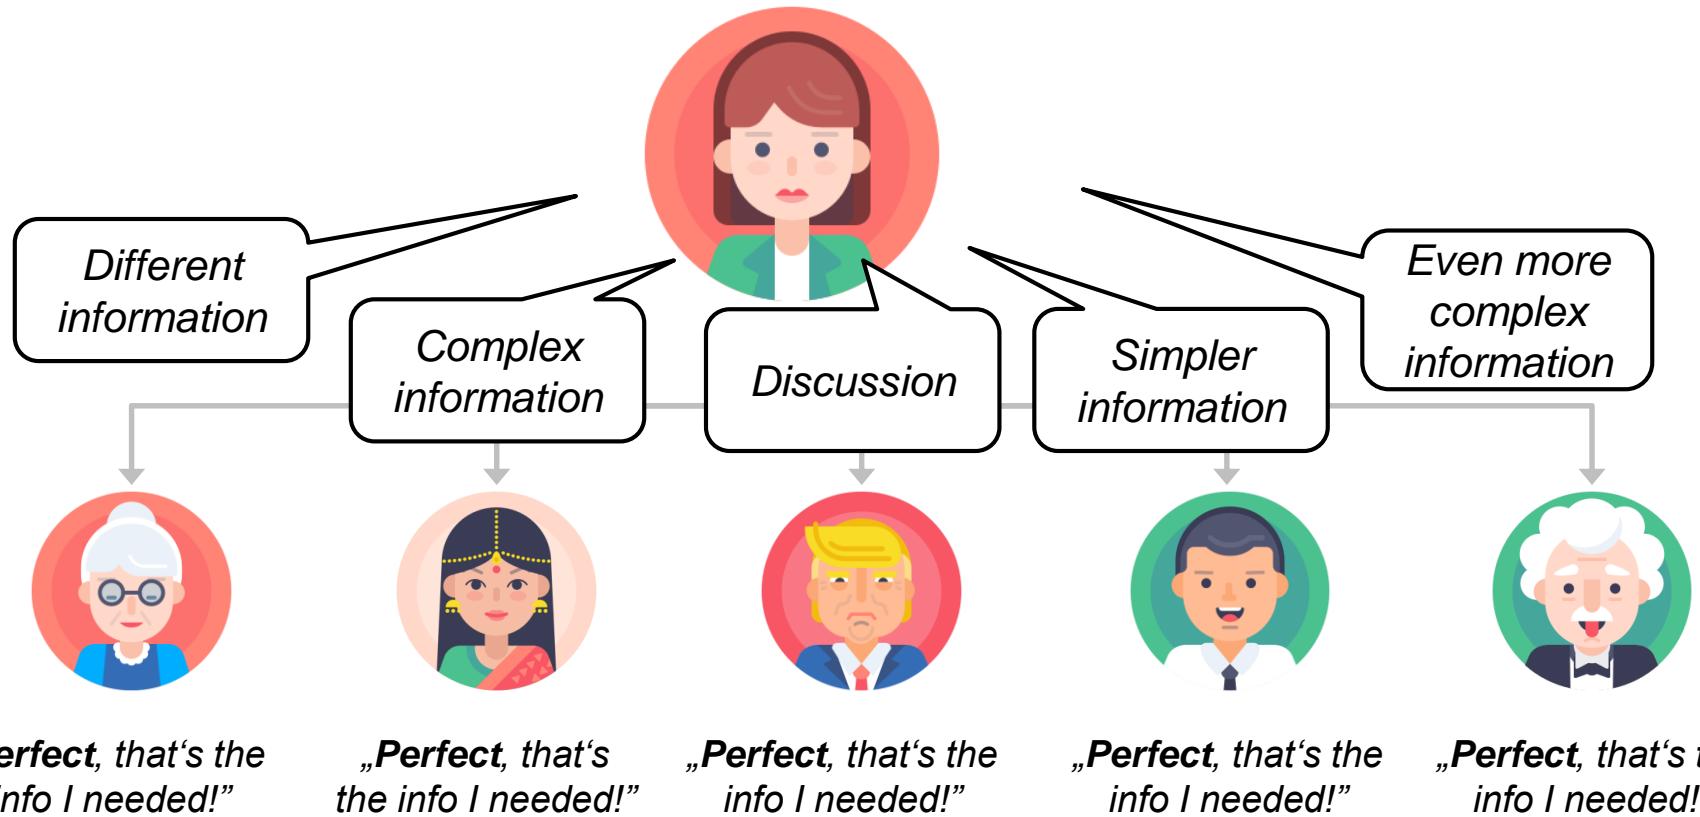

# Communicating complex information to a heterogeneous target audience

How to get from this situation ...

# Communicating complex information to a heterogeneous target audience

... to this situation.

# Focus of this presentation: Lessons learned from a Research Data Centre

## What's the Research Data and Service Centre? (1|2)

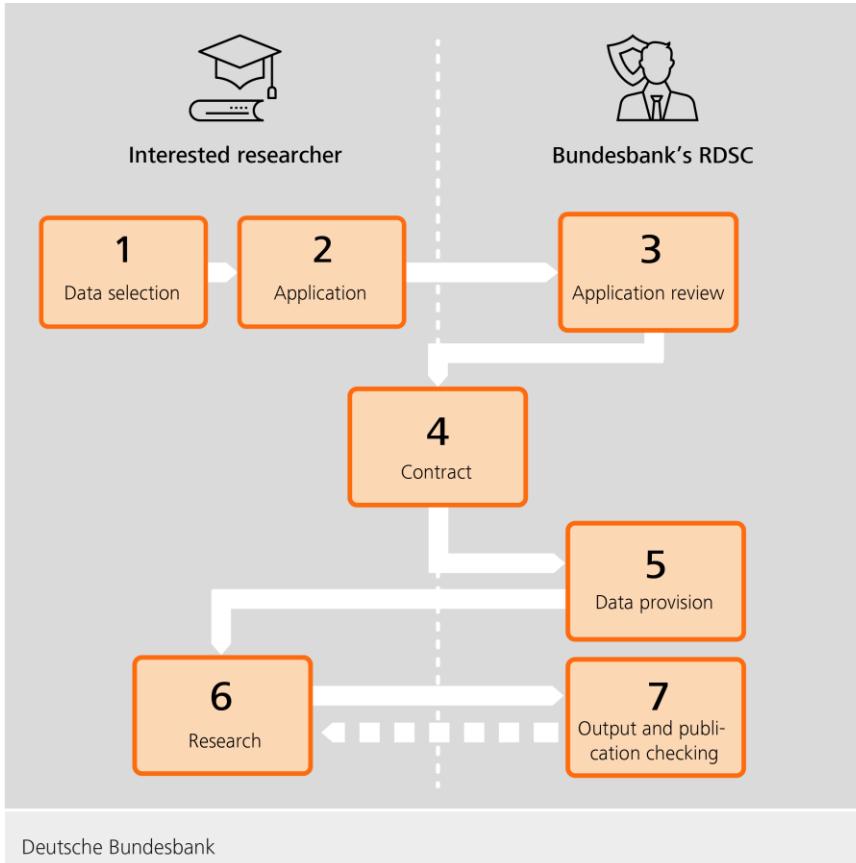

The **Research Data and Service Centre** (RDSC) of the Deutsche Bundesbank offers access for **non-commercial** research to (highly sensitive) **micro data** of the Bundesbank.

Microdata for banks, companies, securities and households are available:

- Generate (standardized) (linked) micro data
- Offer advisory service on data selection and data access
- Provide data access and data protection
- Document data and methodological aspects of the data
- Work on own research projects
- Organize conferences and workshops

# Focus of this presentation: Lessons learned from a Research Data Centre

## What's the Research Data and Service Centre? (2|2)

## Data access

Depending on the dataset (degree of anonymization and legal foundation) the RDSC grants **access** via **three modes**:

- Secure-on-site Access
- Scientific use files
- Controlled Remote Execution

**Currently, the RDSC counts around 300 active research projects**

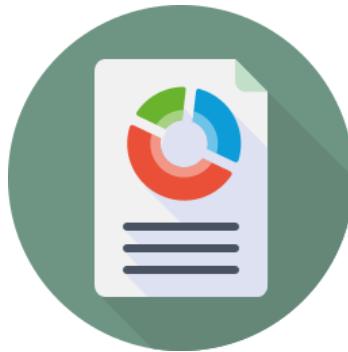

For more information please see the information on our **website**:  
<https://www.bundesbank.de/en/bundesbank/research/rdsc/your-research-project-at-the-rdsc>

# Motivation of the RDSC

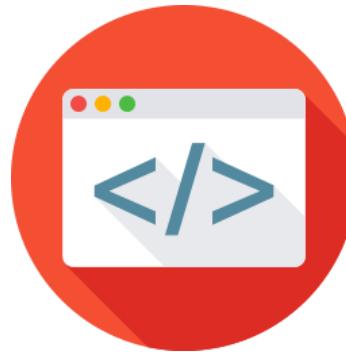

## Status Quo (1|2)

*To support researchers in their projects and especially in output control, the RDSC already provides a variety of materials:*

### Documents

- ✓ Rules for visiting researchers
- ✓ Data reports
- ✓ Technical reports
- ✓ FAQs
- ✓ ...

### Software and code

- ✓ SDC\* package for R
- ✓ SDC package for STATA
- ✓ Output submitter
- ✓ ...

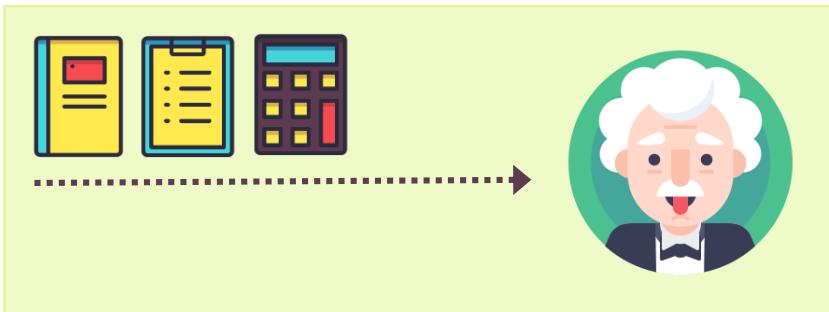

### Online resources

- ✓ Website
- ✓ Metadata und persistent dataset identifiers (DOI)
- ✓ ...

# Motivation of the RDSC

## Status Quo (2|2)

*Provision of support materials (e.g. documents, software) can potentially lead to an information overflow. Although all information is potentially relevant.*

### Scenario 1 - **Little** user support needed

- Small number of datasets
- Easy data structure
- Small dataset size
- Homogeneous legal framework → Similar rules for data access and SDC

### Scenario 2 - **Much** user support needed

- Large number of datasets
- Complex data structure (e.g. multiple IDs, missing IDs)
- Large dataset size
- Heterogeneous legal framework → Dataset-specific rules for data access and SDC

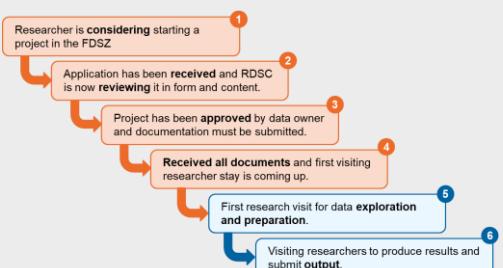

# New concept for a streamlined communication at the RDSC

Summary of the RDSC's procedure

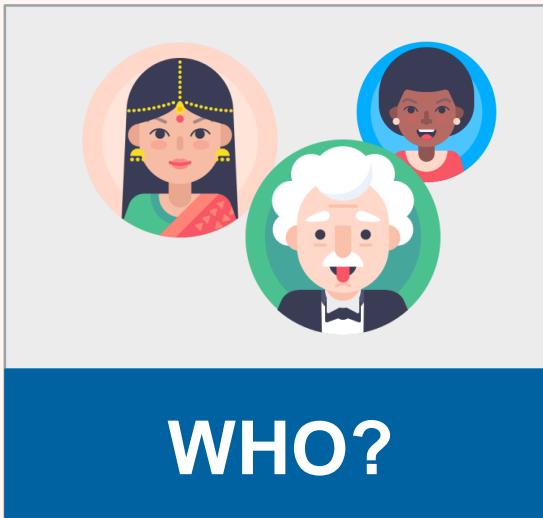

## Our approach to handle scenario 2:

We defined a multitude of **use cases** and structured them using **three main questions**:

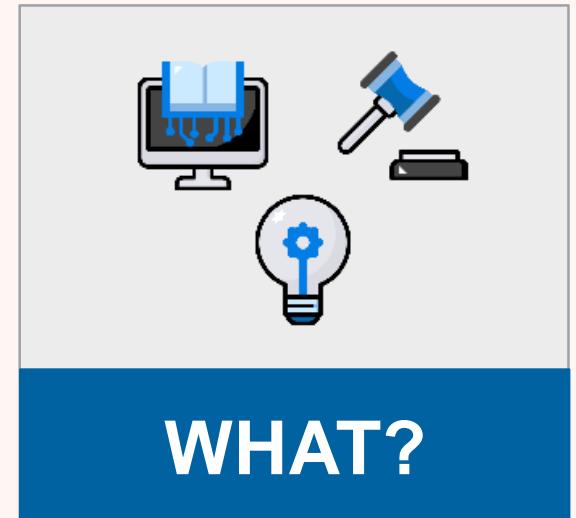

### Use Cases

**WHEN?**

**WHO?**

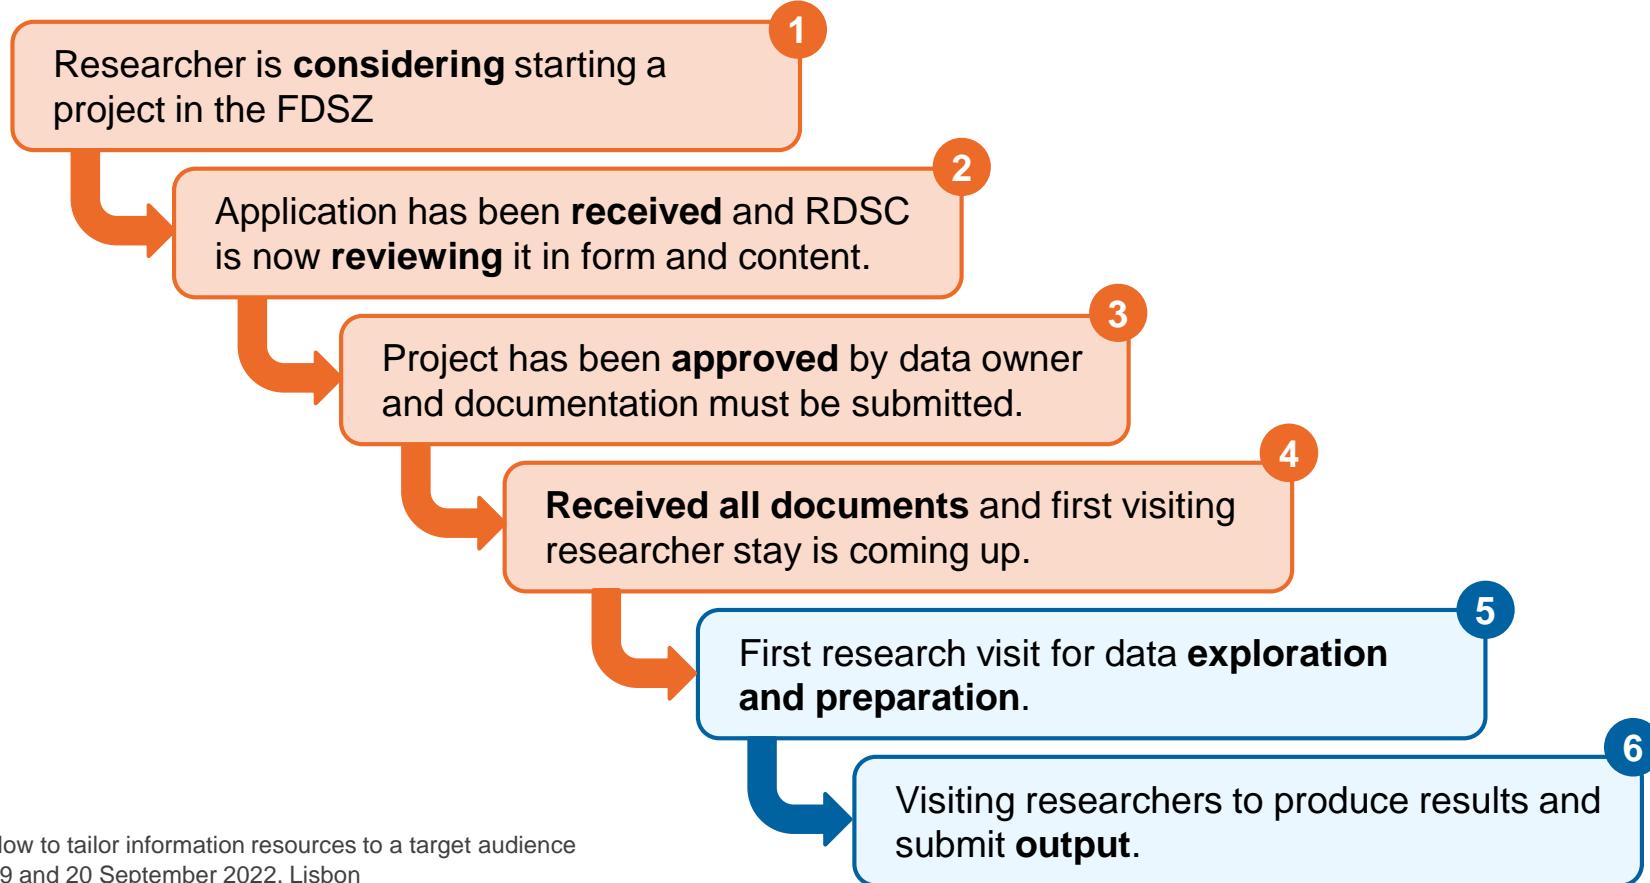

**WHAT?**

# New concept for a streamlined communication at the RDSC

**WHEN?**: Milestones

*Structuring the research process into six milestones.*

# New concept for a streamlined communication at the RDSC

**WHO?**: Defining the target audience

*The RDSC decided to divide its target audience into **three groups**:*

## Group A

Previous experience ...  
✗ at the RDSC  
✗ with the requested dataset(s)

## Group B

Previous experience ...  
✓ at the RDSC  
✗ with the requested dataset(s)

## Group C

Previous experience ...  
✓ at the RDSC  
✓ with the requested dataset(s)

# New concept for a streamlined communication at the RDSC

## WHAT?: Classification of our existing materials (1|2)

The RDSC provides many different materials to researchers. However, the **type of information** is different. Here are some examples:

This screenshot shows a document titled 'Rules for visiting researchers at the RDSC Principles and rules'. It includes a logo for 'Deutsche Bundesbank Research Data and Service Centre'. The document contains several sections of text and a small chart at the bottom. The chart has 'MIDI' at the top, followed by 'CSIR', 'SISI', and 'RDSC' at the bottom, with numerical values decreasing from left to right.

This screenshot shows a technical report titled 'Working with large data at the RDSC Technical Report 2021-04'. It includes a logo for 'Deutsche Bundesbank Research Data and Service Centre'. The report features a diagram of a data science project cycle and a bar chart comparing different data sources. The chart shows 'MIDI' as the largest source, followed by 'CSIR', 'SISI', and 'RDSC'.

This screenshot shows a document titled 'How to use nobsreg5 with “particular” regressions'. It includes a logo for 'Deutsche Bundesbank Research Data and Service Centre'. The document contains code snippets and a table of regression results. The table has columns for 'Observed' and 'Bootstrap' values, along with standard errors, z-scores, p-values, and 95% confidence intervals.

### iii RDSC Rules

Plain text with list of rules that need to be adhered to.

### iii Tips for data handling

Text with explanations and examples.

### iii User guide for SDC tools

Step-by-step instructions with code examples.

# New concept for a streamlined communication at the RDSC

**WHAT?**: Classification of our existing materials (2|2)

*Existing and planned materials are assigned to a **material type**.*

## Explanation

**Understanding-oriented**

- ✓ Data reports
- ✓ Website
- ✓ Technical reports on selected topics
- ✓ RDSC Wiki with FAQ
- ✓ ...

## Reference\*

**Information-oriented**

- ✓ Visiting researcher rules
- ✓ Contracts
- ✓ Confidentiality agreement briefing
- ✓ Website
- ✓ ...

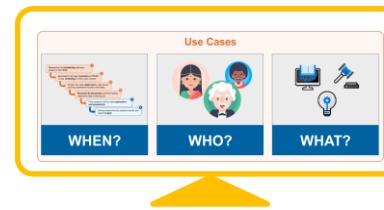

## Tutorials

**Learning-oriented**

- ✓ Instructions for using the SDC packages in Stata and R with examples
- ✓ Example project
- ✓ Tool for automatic checks of certain rules
- ✓ ...

# New concept for a streamlined communication at the RDSC

Assignment of milestones - Use cases - Researcher type - Material type

Use case	Milestone	Researcher type	Material type
Researcher would like to get an overview of all data that can be requested in the RDSC.	① Researcher is considering starting a project	All	 Reference
...	...	...	...
RDSC wants to ensure that researchers understood the rules at the secure environment.	⑤ First research visit for data exploration and preparation	Groups A and B: New / unexperienced researchers	 Explanation
...	...	...	...
Researcher would like to use the nobs commands in Stata, following guidance and examples.	⑥ Research visits to produce results and submit output	All	 Tutorial

# New concept for a streamlined communication at the RDSC

## Simplified outcome

	No previous experience	Previous experience at the RDSC	Previous experience at RDSC and with requested data
Classified by material type			
Milestone ①			
Milestone ②			
...			
Milestone ⑥			

More experience ⇒ less information needed

Information is only provided at the time it is needed

# New concept for a streamlined communication at the RDSC

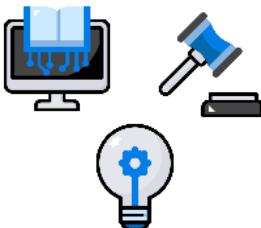

## Summary of the three steps procedure

**WHEN?** Identify **milestones** that mark important stages of a research project to learn when resources are needed.

**WHO?** Classify researchers by their skill set into different buckets to learn about the **target audience** of the resources.

**WHAT?** Identify the appropriate **type of resources** needed (e.g. formal legal reference vs. user guide with many examples). The RDSC uses a simplified version of the Diátaxis framework (<https://diataxis.fr/>).

# Thank you!

Cada instrumento financeiro pode ser desagregado nouros instrumentos em função, por exemplo, do respetivo prazo (curto e longo prazo).

**Explora mais sobre os instrumentos financeiros na área de recursos, em:  
O que é um Instrumento financeiro?**

Como vimos no início desta temporada, a capacidade ou necessidade de financiamento do total da economia e dos vários setores institucionais também pode ser calculada através da conta financeira. De facto, a capacidade ou necessidade de financiamento é o elemento de ligação entre a conta não financeira e a conta financeira da economia, ou dos diferentes setores, e é apurada a partir das transações em ativos financeiros e passivos, correspondendo ao montante líquido dos recursos (total de recursos deduzido do total de responsabilidades) que um determinado setor institucional disponibiliza aos restantes setores (se for positivo) ou que recebe dos restantes setores (se for negativo).

O QUE DIZEM AS ESTATÍSTICAS?

**Ativos financeiros líquidos**

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## New channels, new approaches, new data formats<sup>1</sup>

Fernando Lemos,  
Central Bank of Brazil

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# **New Channels, New Approaches, New Data Formats**

**Fernando Lemos  
Department of Statistics  
Banco Central do Brasil**

Lisbon, September 20, 2022

# Introduction

---

Unlocking new **channels**, adopting new outreach **approaches**, and developing new data **formats** for the statistics dissemination process are important means to enhance certain aspects of **serviceability of statistics**, especially availability and timeliness.

In this regard, new channels and approaches are not ends but rather means of a data dissemination framework.

Efficiency and cost-effectiveness should drive the choices of channels, approaches, and formats of statistics dissemination.

# Introduction

---

The **channels** through which statistics are disseminated can determine the audiences that they reach.

Different **approaches** to data dissemination are instrumental to enhancing the understanding of datasets and thus increase their use and target specific audiences (e.g., students or researchers and academics).

Different **formats** of a same dataset enable disseminating the same information to different audiences, albeit with different levels of detail.

# New Channels

---

The **channels** are the means by which the Banco Central do Brasil (BCB) seeks to reach its audience. Channels, in this case, refer to the different media:

- “Old”: BCB webpage, in person press releases, speeches; standardized time series; and
- “New”: Twitter, Facebook, Instagram, Big Data-type databases.

The introduction of new channels is a means by which the BCB seeks to reach the broadest **possible** audience.

# New Approaches

---

The new **approaches** are essentially the means by which the BCB seeks to engage users in the use of its data. This includes, for example:

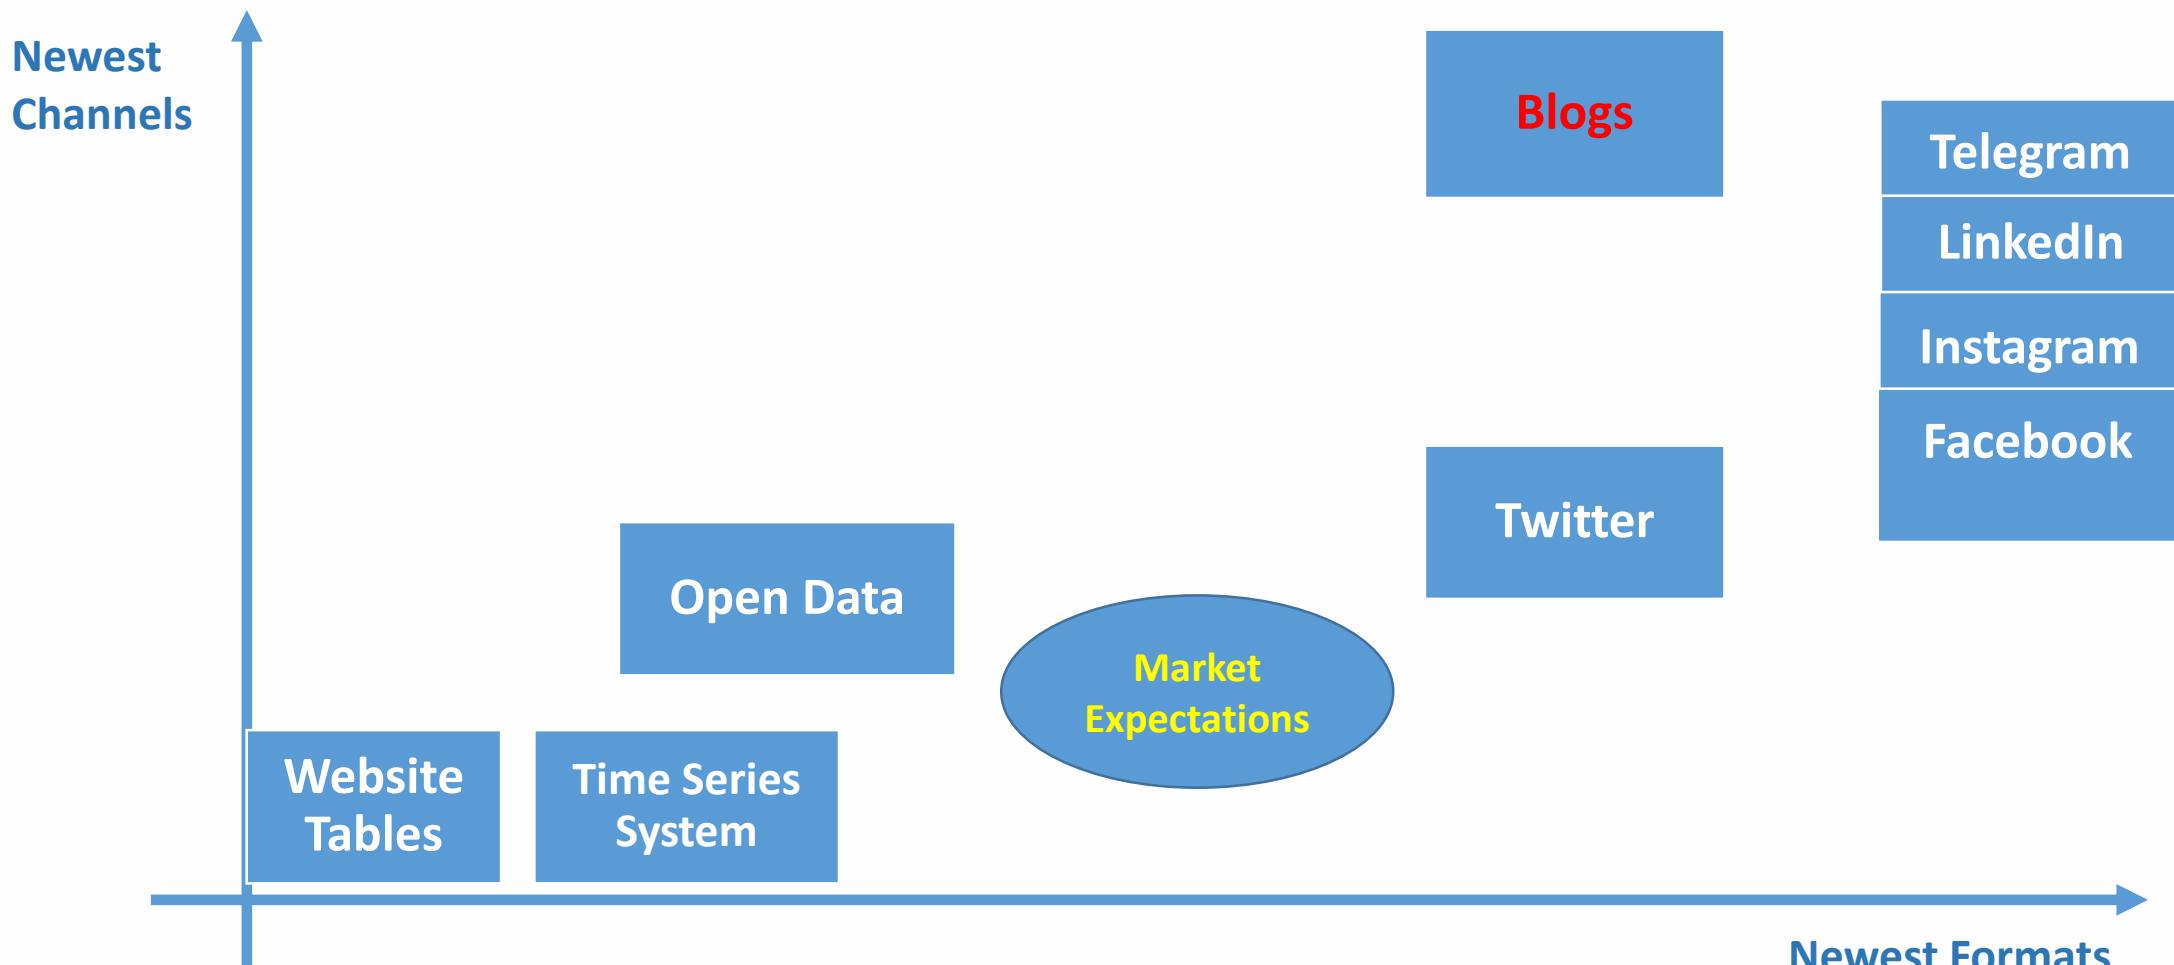

- Placing more emphasis on **disseminating concepts and definitions**, informing potential users of the serviceability, for them, of the statistics disseminated by the BCB; and
- **Asking data users' and providers' views** on data needs and data quality.

# New Formats

---

The **formats** are the way in which data are presented. New formats seek to broaden the audience, catering to those who otherwise would not make use of statistics, and to enhance the serviceability of statistics to those who already use it. These formats and their channels are shown in the next slide.

# BCB Statistics Channels and Formats

# BCB Website and Social Media

---

All statistics disseminated by the BCB are published on the BCB website: [www.bcb.gov.br](http://www.bcb.gov.br)

The BCB also resorts to several social media channels for the dissemination of data. The social media channels generally convey headline data, providing links to detailed statistics.

There are also statistics compiled by the BCB that are part of IO data dissemination initiatives which are published only in IO websites, such as the CDIS, for example, in the IMF website.

Press Release - 8.29.2022

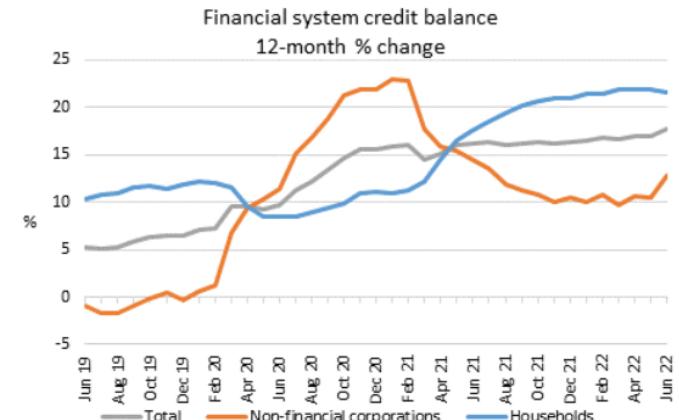

## 1. Total credit to the non-financial sector

In June 2022, total credit to the non-financial sector reached BRL 14.1 trillion (153.8% of GDP), up 3.0% in the month. This expansion was mainly due to the 6.8% increase in the external debt, affected by the exchange rate depreciation of 10.8%. In the quarterly comparison, total credit grew 5.4%, mostly due to expansions in National Financial System (SFN) credit portfolio (3.7%) and debt securities issued by government (5.3%).

Total credit to nonfinancial corporations reached BRL 4.8 trillion (52.7% of GDP), up 4.6% in the month, mostly influenced by an 8.6% increase in the external debt. In 2022Q2, the 7.0% expansion in total credit to nonfinancial corporations mostly reflected increases in external debt loans (9.4%), in private securities (10.3%), and in SFN loans and financing portfolio (3.0%).

Total credit to households reached BRL 3.1 trillion (34.2% of GDP) in June, increasing 1.3% in the month and 4.1% in 2022Q2, due to the expansion in SFN loans.

# Plans for Future Initiatives

---

New initiatives are being assessed, such as:

- Short videos on Youtube and other platforms providing information on statistical methodology;
- Videos for data dissemination;
- Use of other media channels, such as TikTok; and
- Use of blogs.

# Challenges

---

Enhancing these aspects and ensuring that they lead to the serviceability of data presents some **challenges**, such as:

- Identifying the target audiences;
- Pairing target audiences with the correct **mix of format/channel/statistics**;
- Identifying the most **cost-effective** initiatives;
- Ensuring that the format/channel/type of data are a **means to an end**, not an end in itself (careful with the “novelty frenzy”); and
- Maintaining the **focus of compilers on the quality of statistics**, first and foremost.

Thank you for your attention!

---

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## More insight into Dutch mortgage debt data<sup>1</sup>

Eva Hagendoorn and Tim Hersevoort,  
De Nederlandsche Bank

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

### History and context

Due to capacity constraints the publication task of our Statistics Division was de-prioritized for several years. Most resources were spent on (seemingly ever increasing) production activities and the development of a new and future-proof ICT-system. As such, the development of our Statistics website, which was renewed in 2015, has been somewhat neglected. For one, most data are presented as flat tables, which can be searched by means of theme filters on the 'data search' page. Furthermore, we publish statistical news bulletins, in which we describe current developments in the data. Finally, we have as of late started to increase the use of visualizations (via HighCharts) in the form of dashboards around some of the commonly used statistics. We will revert back to the dashboards later.

Our Statistics division is made up of about a dozen teams, which are mostly vertically oriented. This means they are organized around the statistical products they produce, such as the Anacredit team or the Balance of Payments team. This set-up was also reflected in our publications, which were very much product-oriented.

Another relevant development in recent years is the formal close cooperation between DNB and Statistics Netherlands. This has allowed for more specialization through a clear division of tasks, which is also reflected in our publications. We focus on the financial system, securities and balance of payments/external statistics, whereas Statistics Netherlands is the specialist when it comes to households, non-financial corporations and sector accounts as a whole. As such, our publications are mostly focused on developments within the financial system and less on developments in other sectors.

### Role publication team Statistics

Since 2020, the Statistics division has fortunately succeeded in increasing its resources and reserving some of these to enhance its publishing task. Previously, the management of the various activities surrounding the website and statistical publications was fragmented within the division. A publication team was appointed in 2021, tasked with coordinating the various statistical publications, the further development of the website and to stimulate publications. The team is in close contact with the bank-wide communication department to leverage on existing know-how and optimize the timing of publications.

One of the goals of the publication team is to better take into account user wishes with regard to our publications. In 2021, with the help of an external research agency, a user survey was conducted among internal and external users to find out what the image of these users is about the Statistics department and its products and services. This showed, among other things, that users need more overview and context for the various statistical products that DNB draws up as a Statistical Authority. The way in which statistics are currently presented is often dictated by the organizational structure (vertical, product-by-product) and less by the user's demand (i.e. more thematic and integrated). At the same time, the DNB-wide strategy is to communicate more around current themes that play a role in the outside world, such as the housing market, pensions or inflation. By shifting towards a more integrated approach we can focus our limited resources on the themes that are most in demand from the social debate.

### **Renewal residential mortgage dashboard**

We have found that thematic dashboards are an especially effective way to present data about a specific theme to a wide audience. Visualizations are usually easier to digest than flat tables. Furthermore, with the use of dashboards we can combine the data from different statistical products we compile.

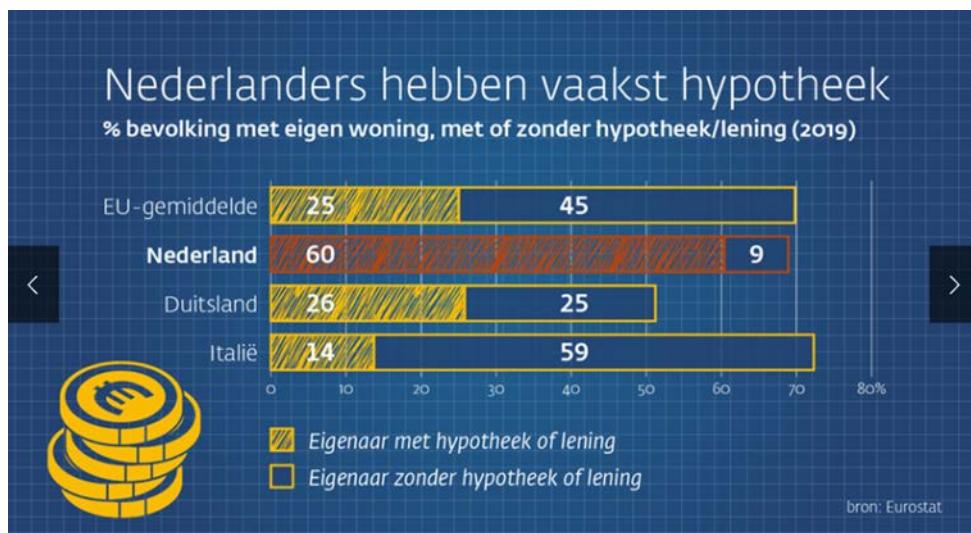

One of the themes where there is a need for more integrated overview and more qualitative data concerns the mortgage market. DNB has many statistics on this subject, but these data are still in various tables and are sometimes difficult for users to compare with those of the other important statistical authority in the Netherlands, Statistics Netherlands. A [residential mortgage dashboard](#) has already been published, but this only concerns a limited part of the data that DNB has at its disposal, namely only the level and development of the mortgage debt on banks' balance sheets (including securitisations).

### *Increasing demand for information about the housing market*

The demand for good, reliable and detailed insights into the residential mortgages granted to Dutch households has increased sharply in recent years. This has to do with the important role that the housing market plays for the Dutch economy and for the financial sector. Dutch mortgage debt per capita is among the biggest in the world.

The Dutch housing market has been overheated for some time. Over the past 5 years, house prices have gone up by 8 percent on average. At the end of last year, the average price of owner-occupied was more than 20 percent higher than a year earlier. This is the largest price increase since the start of the measurement by Statistics Netherlands.

Moreover, we have high mortgage debts in the Netherlands compared to other countries. In fact, in no other European country does such a large proportion of the population have a mortgage loan (see Figure 1). Partly due to the price increases of houses, households are taking on more and more risks when taking out a mortgage.

**Figure 1**

For the stability of the Dutch financial system, the mortgage debt of the Dutch has a major influence, because house prices rise when the economy goes well, giving homeowners more to spend. If the economy is not doing well, falling house prices have an additional depressing effect on the economy.

#### *Increasing data availability*

As previously outlined, DNB's Statistical Division compiles statistics relating to Dutch financial institutions. These institutions report detailed information to DNB about the mortgages they issue. Macro figures on mortgages provide information on the size and development of mortgage debt and mortgage rates at Dutch financial institutions. In addition, more and more information is becoming available.

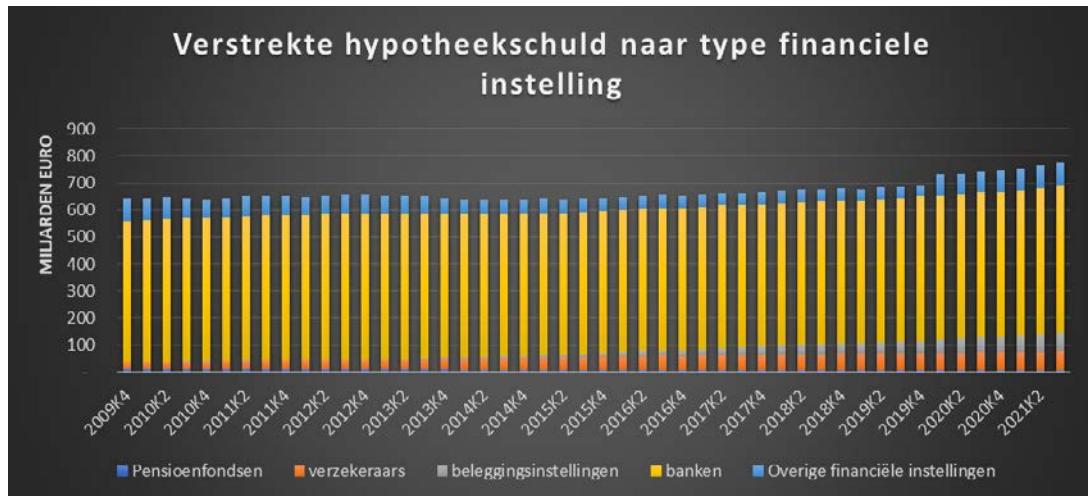

In 2021, DNB started publishing data from other providers in the mortgage market, such as insurers, pension funds, investment institutions. Also, we started to collect information (of which also mortgage debt information) on other financial institutions, that had not been in our population before, as of the start of 2020.

Also in relation to the banking sector, DNB started collecting more information. In addition to bank balance sheets (BSI) statistics and interest rate statistics (MIR), DNB also intends to publish data on mortgages issued by banks on the basis of the so-called RRE dataset. This is a granular dataset, somewhat similar to Anacredit (for corporate loans), in which additional details about the collateral of the loan or the recipient of the loan are available. For example, a distinction can be made according to the age of the recipient of the loan (older or younger than 35 years). This is an indication of whether someone is a starter on the housing market or a transferee. In the long term, geographical information could also be published to provide insight into in which region of the Netherlands the highest mortgage debts are.

#### **Dashboard content**

In order to maintain an overview of the relationship between all these different datasets and to connect with the theme that also plays a broader role among visitors to the DNB website, we want to launch an overarching mortgage dashboard. This dashboard shows a number of different headings, starting with the section 'Size of

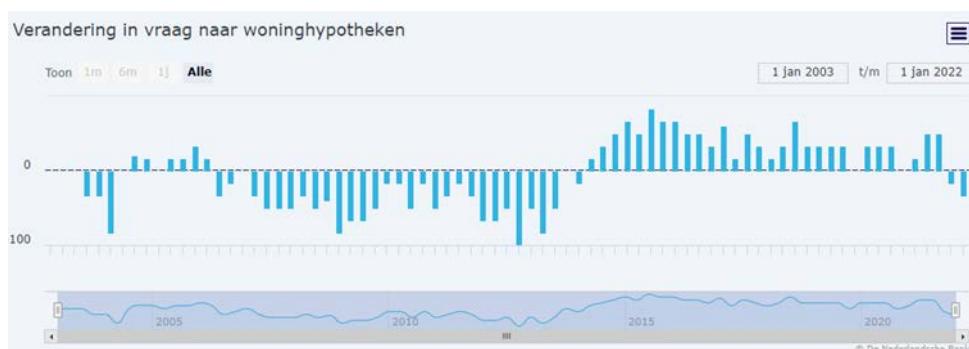

mortgage market', which provides a total overview of the outstanding mortgages at financial institutions (figure 2).

**Figure 2**

The other sections of the mortgage dashboard relate entirely to mortgages provided by banks, the most important sector in the mortgage market. The reason behind this is that much more information is collected about mortgages granted by banks than the mortgages provided by other financial institutions, where only the information from the balance sheet data is reported to DNB.

The other sections provide insight into subjects as mortgage rates and 'loan to values'. One section, which is in fact more of a barometer for the mortgage market, is based on the so-called Bank Lending Survey. The figures based on the BLS provide qualitative information about the developments in the mortgage market that banks observe (see Figure 3).

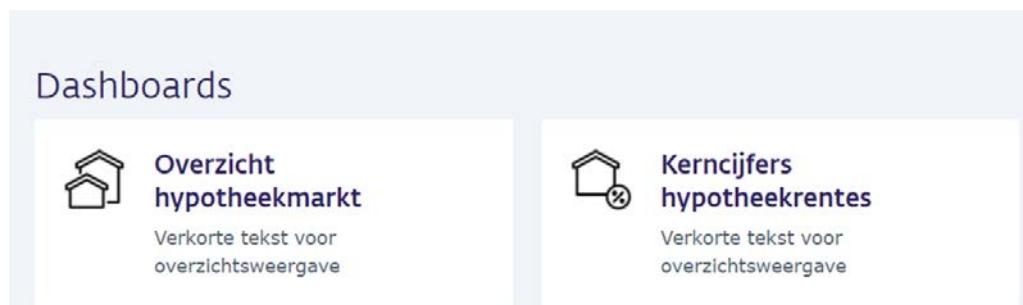

**Figure 3**

#### Navigation dashboard

Last year, DNB amended the dashboard overview page of the dashboards. Instead of graphs, icons are now shown, making it easier for users to understand at a glance what the dashboard is about (Figure 4).

**Figure 4**

After clicking on the icon for the residential mortgages, in the case of the new home mortgage dashboard, an intermediate page with a number of sub-sections and an introductory text (figure 5) is added.

**Figure 5**

### Challenges

The statistics publications team encountered various challenges in preparing a new mortgage dashboard.

- 1) On the one hand, we have to deal with organizational challenges, in which the various statistical teams that own the relevant statistics in terms of content, are under a lot of pressure on the teams due to an ongoing renewal process. As a result, the priority for even more innovations from these teams was relatively low.
- 2) Knowledge in the field of the further development of the visualizations in the HighCharts program had to be purchased, as this was not present in the publication team. This makes it both costly and sometimes difficult to get enough commitment at the right time.
- 3) In terms of content, there are also challenges to the datasets. The statistics published by DNB concern source statistics that are not always 100% consistent with the integrated statistics in the sector accounts. You also have to make sure that the series of the different sectors are also similar to each other, if you present them in one overview. If, as a result, there are differences in the totals at macro level, for example if you compare them with CBS, you want to be able to explain this properly.

- 4) One of the datasets, the RRE dataset, has never been made available to a wide audience before and because of this and because of the degree of detail of this dataset, legal discussions are still taking place. For this reason, there is currently no clarity as to when this data can be published and included in the dashboard.

### **Summary**

Publications by DNB's Statistics Division have been prioritised away for a while, but in 2021 this has changed due to two things:

- 1) Resources are committed to the publishing task (the publishing team)
- 2) Users are consulted at least once every two years via a user survey

In order to simultaneously meet the user's need for more overview and interpretation and to respond specifically to the current theme of the housing market, a new residential mortgage dashboard will be launched in 2022. This dashboard provides an overview of relevant developments regarding residential mortgages granted by Dutch financial institutions, from DNB's role as a specialist in the field of the financial sector.

# More insight into Dutch mortgage debt data

Eva Hagendoorn

# Agenda

1. Introduction Dutch delegation
2. Role of publications team at Statistics division
3. Institutional playing field
4. Statistics website DNB and publication activities
5. Thematic dashboards on statistical website
6. The case for a new residential mortgage dashboard
7. Challenges

# Introduction Dutch delegation

Eva Hagendoorn

- Product Owner Publications Team at DNB Statistics (April 2021-present)
- Policy Advisor at Balance of Payments team at DNB Statistics (May 2013-April 2021)
- Reporter at Newsagency ANP on Economic and Financial news (Dec 2006-April 2013)
- Master of science in Economics at Utrecht University (2001-2005)
- Degree in journalism at Erasmus University (2006)

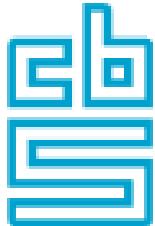

Tim Hersevoort

- Web editor Publications Team at DNB Statistics (April 2022-present)
- Content and PR specialist at Robert Walters (Nov 2020-April 2022)
- Data Storyteller/copywriter/marketeer at Valcon (Sep 2019-Aug 2020)
- Sportsdesk Editor at Gracenote (July 2012-Aug 2019)
- Bachelors degree Journalism at Hogeschool Utrecht (2008-2012)

# Publications team

- Started in 2021 as a **new, horizontal team**
- One of the goals is to focus more on **user wishes** (internal and external)
- In 2021 the publications team coordinated a **survey** among different groups of users (internal and external)
- Conclusion: Users want us to tell the **story behind the figures** more often and want to have more overview of the different statistical products/datasets

# Institutional playing field

Close cooperation with Statistics Netherlands in compiling macroeconomic statistics (**univocal figures on the Netherlands' relations with the rest of the world**) and clear division of responsibilities in recent years

## DNB

- Compilation of source statistics of financial sectors
- External statistics (e.g. balance of payments and direct investment)
- Securities

## CBS

- National accounts
- Source statistics of non-financial sectors (households, government, non-financial companies)

# Statistical Publications

- Statistical news articles in cooperation with Communications-department and occasionally with colleagues from research, supervision or financial stability divisions
- Recently (2021) started posting content (mainly promotion Statistical News) on social media (LinkedIn and Twitter)

The image shows two side-by-side screenshots of the De Nederlandsche Bank website.

**Left Screenshot:** A screenshot of the 'Statistical news' section. At the top, there's a purple banner with a megaphone icon and the text: "Receive our latest news directly in your mailbox? Register for our DNB News Service. You decide what news you want to receive and how often." Below this is a search bar with placeholder text "Uw zoekopdracht" and a "Search" button. A sidebar on the left allows filtering by "Type of information", "Topic", "Topic for the sector", "Year" (set to "05 July 2022"), and "Sector". The main content area displays "42 results" with two examples: "Russian invasion contributes to fall in Dutch current account balance" (with an image of a cargo ship) and "Income flowing to tax havens through the Netherlands significantly" (with an image of a person walking past a modern building). There are also small icons for sharing and a "Stay up to date" button.

**Right Screenshot:** A screenshot of the De Nederlandsche Bank LinkedIn profile. The profile picture is a windmill, and the name is "De Nederlandsche Bank". It has 52,369 followers and 2,074 posts. A post titled "Nederland is een blijft een wereldspeler als het gaat om buitenlandse directe investeringen, zo blijkt uit de nieuwe CBS-publicatie Nederland Handelsland 2022, waaraan wij meeschreven. Waar komen al die investeringen vandaan? ...meer weergeven" is shown, accompanied by an image of a field of tulips. Below it are two more posts: "Nederland Handelsland 2022" (with 1 comment and 2 shared items) and "Onze divisiedirecteur Toezicht Beleid, Maarten Gelderman, schrijft regelmatig blogs over alle aspecten die bij toezicht komen kijken. Nieuwsgierig? Lees zijn blog van augustus hier." (with 1 comment and 2 shared items).

# Statistics website DNB - visualizations

- For visualizations we use a tool called 'High Charts'
- Currently 15 dashboards build around a statistical theme

DNB.nl > Statistics > Dashboards

## Dashboards

In the dashboards below, we present the main trends in the financial sector and the balance of payments. The charts in the dashboards are updated in real-time as soon as new data become available, which means they are always up to date. The series used in the dashboards only represent a small selection of the data tables available in the database. Series not included in the dashboards can be found on the Data search page. There are several export options for each of the charts in a dashboard, and you can save the charts as images. It is also possible to download series of charts. You can use the "embed" option to include the chart in another website. It will then be updated automatically.

**DNB's balance sheet**  
The DNB Balance sheet dashboard presents the balance sheet of De Nederlandsche Bank.

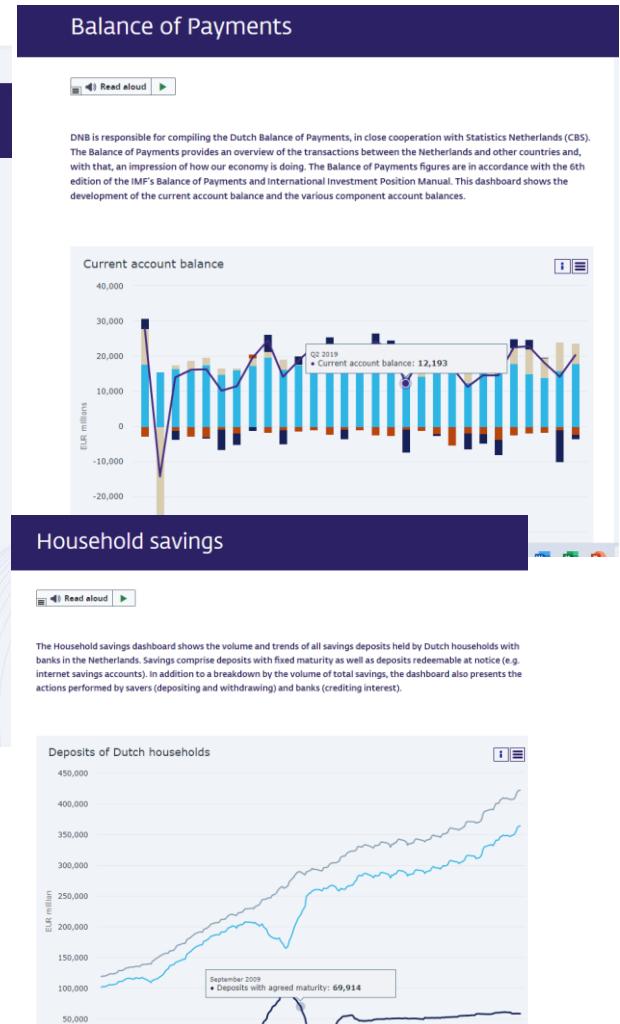

**Investment Funds**  
Investment funds are investment companies or funds that attract funds from the public by issuing participations (shares or units) and invest these ...

**Balance of Payments**  
DNB is responsible for compiling the Dutch Balance of Payments, in close cooperation with Statistics Netherlands (CBS).

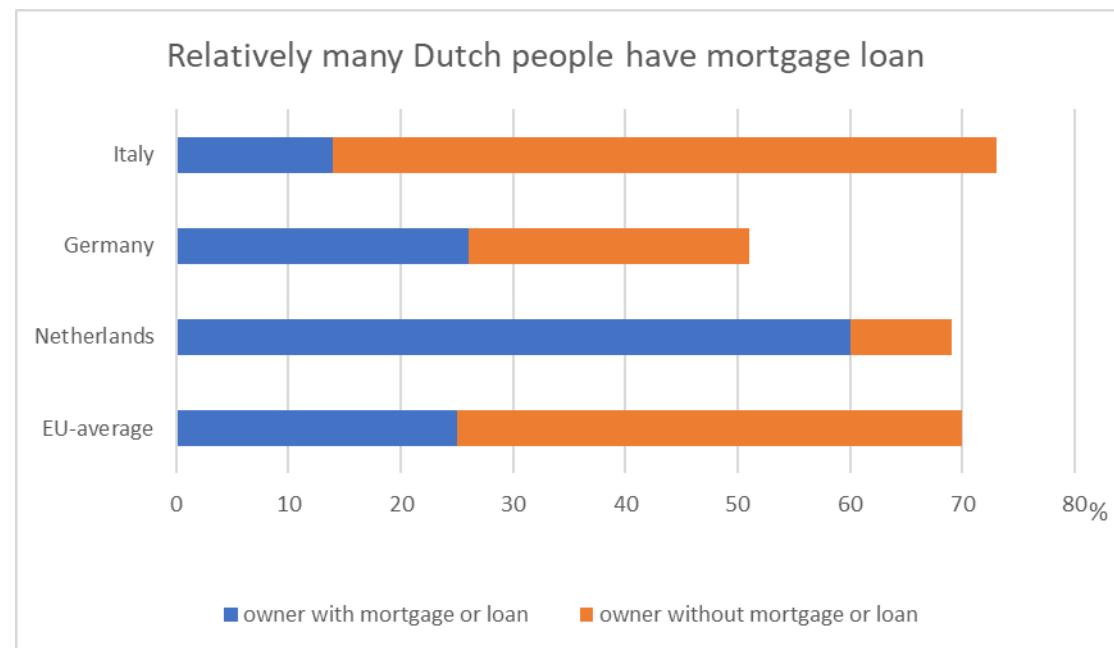

**Financial markets**  
This dashboard presents the leading stock exchanges for the Netherlands (AEX, All-Share and Midkap), the United States (Dow Jones and Nasdaq) and ...

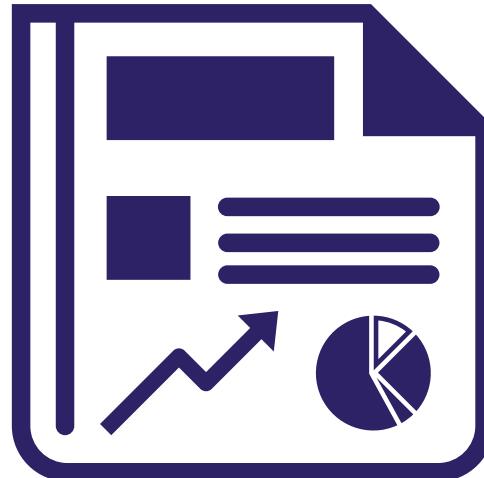

# Why are Dutch mortgage data so important?

- Dutch mortgage debt per capita is among the highest in the world (in %GDP).
- ~60% of inhabitants have a mortgage loan, highest in Europe.
- Housing prices have gone up by 8 percent on average over the last 5 years and recently this has increased to 20 percent per year
- Mortgage debt could have substantial effect on financial stability

# Business case for new mortgage dashboard

- Current dashboard contains only data on mortgages provided by banks, while other financial sectors are becoming increasingly important (>20% market share)
- We recently began collecting more information from non-banks such as 'other financial companies' (S125 and S126)
- Started publishing mortgage data from pension funds, insurance companies and collective investment institutions in 2021
- Recently started collecting (granular) data about mortgage debt issued by banks (RRE and CRE datasets).

# New dashboard

3 topics/subpages to start with:

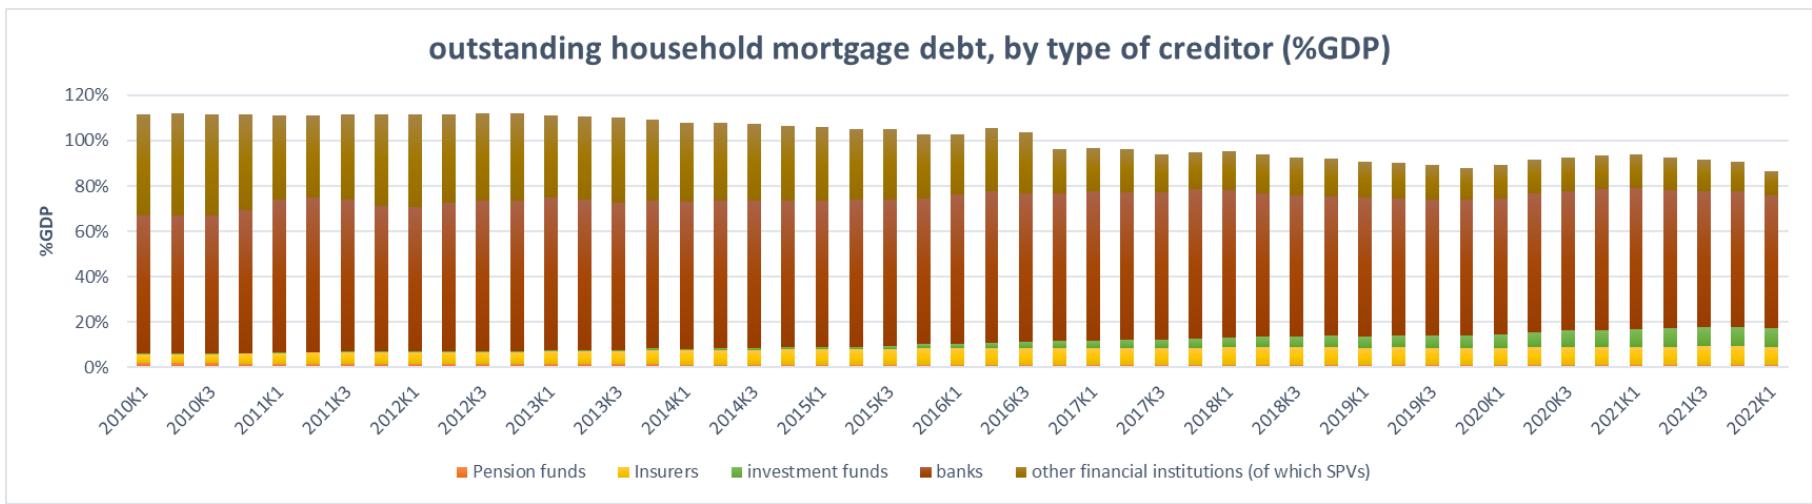

- Overview of mortgage loans issued by the financial sector (next slide)
- Interest rate developments
- Supply and demand developments (Bank Lending Survey)

More information added when we can publish our Residential Real Estate data, for example information on data by region or by age category

The dashboard interface features a light blue header bar with the word "Dashboards". Below it are three rectangular cards, each with a dark blue vertical sidebar on the left.

- Omvang hypotheekmarkt**  
De ontwikkeling van de omvang van de woninghypotheken die door Nederlandse huishoudens worden aangehouden bij financiële instellingen in Nederland.
- Hypotheekrentes**  
De gemiddelde rente bij nieuw afgesloten hypotheken via banken is de afgelopen jaren gedaald. Dit wordt deels verklard door het beleid van de ECB.
- Vraag en aanbod van hypotheken**  
De ontwikkeling van de vraag naar woninghypotheken en de door banken gehanteerde acceptatiecriteria.

# Overview of mortgage loans by financial sector

# Challenges

- Horizontally organized team – how to make sure statistical teams put sufficient efforts in the publication and communication aspect
- Knowledge about technical aspect High Charts not in-house – how to not become too dependent on external resources
- Consistency and comparability of datasets (also with Statistics Netherlands) – how to cope with differences between datasets
- Some of the datasets are relatively new and there are still quality issues that have to be checked – how to balance versus the strong external interest in the data
- Extremely granular datasets contain (too) much information – how to cope with privacy issues and the legal basis for publication

# Conclusion/Summary

1. As of 2021 more priority to publishing task of DNB Statistics division:
  - Commitment of resources to publication task
  - Users consulted at least every 2 years
  
2. Release of new mortgage debt dashboard expected in 2022, which provides more insight in this important and for users also very relevant theme in which DNB Statistics can play an important role

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## Construction of bivariate fan chart from joint distribution<sup>1</sup>

Purnima Shaw,  
Reserve Bank of India

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# **Communicating Statistics: Construction of Bivariate Fan Chart from Joint Distribution**

RESERVE BANK OF INDIA

## ***Communication on Central Bank Statistics: Unlocking the Next Level***

organised jointly by the Irving Fisher Committee on Central Bank Statistics of the Bank for International Settlements and Banco de Portugal

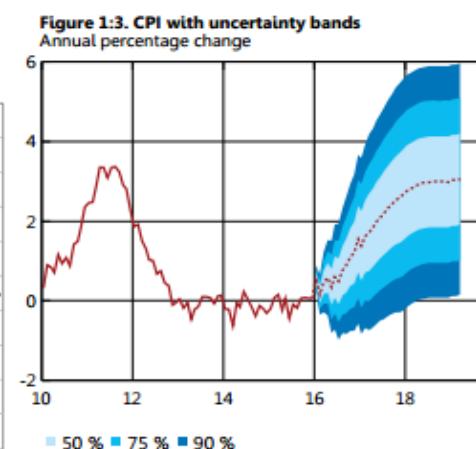

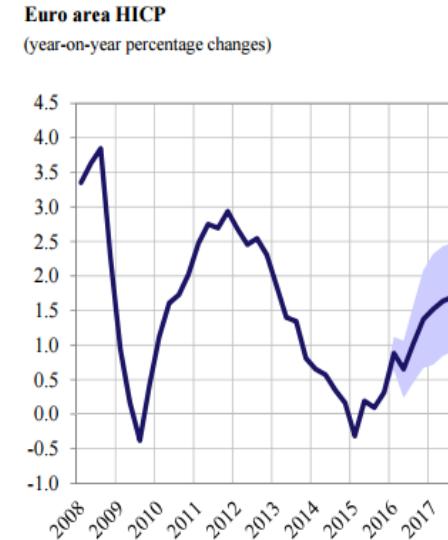

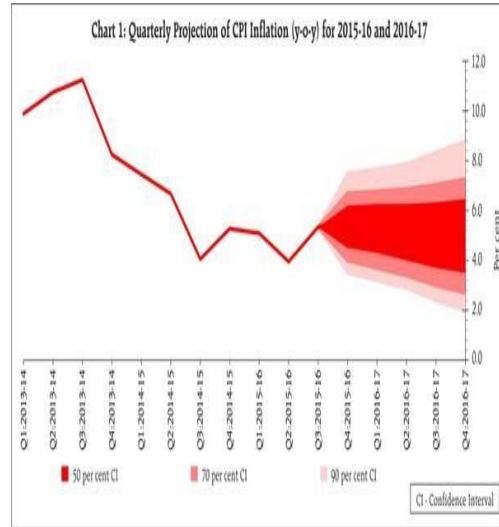

Lisbon, September 19-20, 2022

---

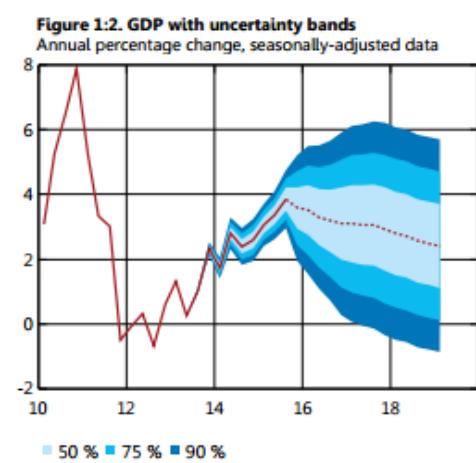

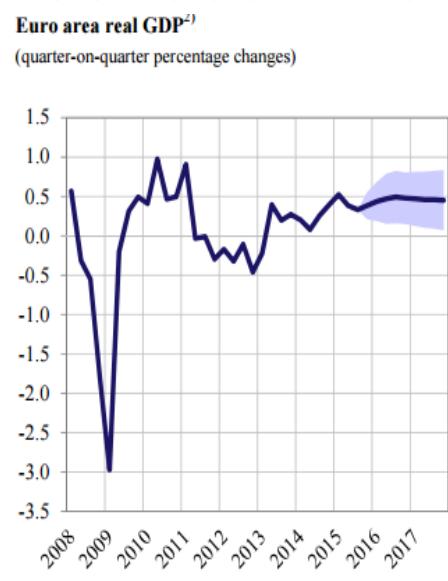

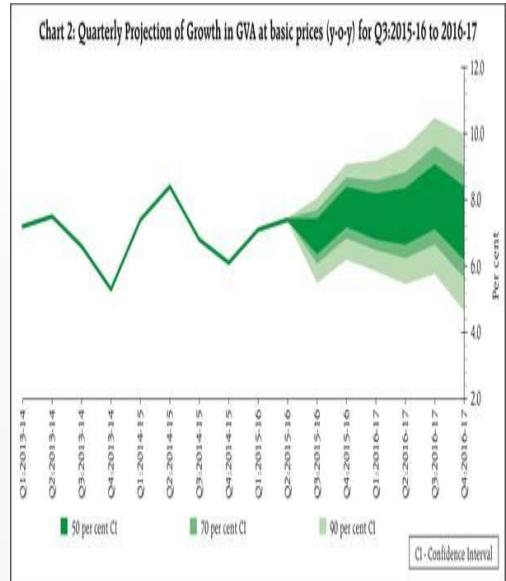

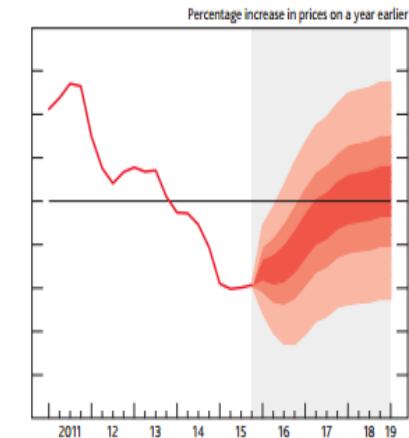

# Statistical Communication

- Central Banks communicate forecasts of macroeconomic variables
  - ✓ Risks to forecasts based on which policy stance taken – need to be minimized
  - ✓ Forecast errors – required to be estimated
  - ✓ Risk quantification – Confidence interval around forecasts
- Central Banks publish fan charts to
  - ✓ communicate risks/ uncertainty associated to forecasts of inflation and growth
  - ✓ Fan chart – communication of quantified uncertainty around forecast using confidence intervals

# Fan-Charts for Economy's Growth and Inflation: India, Europe, Sweden and UK

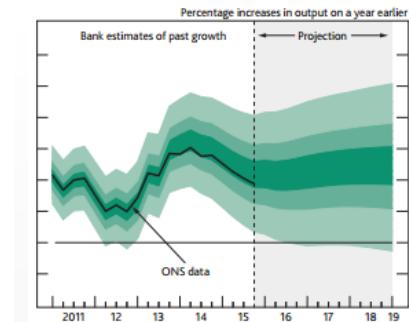

**Chart 5.2** CPI inflation projection based on market interest rate expectations and £375 billion purchased assets

The fan chart depicts the probability of various outcomes for GDP growth. It has been conditioned on the assumption that the stock of purchased assets financed by the issuance of central bank reserves remains at £375 billion throughout the forecast period. To the left of the vertical dashed line, the distribution reflects the likelihood of revisions to the data over the past; to the right, it reflects uncertainty over the evolution of GDP growth in the future. If economic circumstances identical to today's were to prevail on 100 occasions, the MPC's best collective judgement is that the mature estimate of GDP growth would lie within the darkest central band on only 30 of those occasions. The fan chart also indicates that one in ten occasions (one in ten) to lie within each pair of the lighter green bands on 30 occasions. In a particular quarter of the forecast period, GDP growth is therefore expected to lie somewhere within the fan on 90 out of 100 occasions. And on the remaining 10 out of 100 occasions GDP growth can fall anywhere outside the green area of the fan chart. Over the forecast period, this has been depicted by the light grey background. See the box on page 39 of the November 2007 Inflation Report for a fuller description of the fan chart and what it represents.

**Chart 5.1** GDP projection based on market interest rate expectations and £375 billion purchased assets

# Fan Chart

Fan chart depicts:

- ✓ a measure of central tendency (central view)
- ✓ a view on degree of uncertainty
- ✓ a view on balance of risk (often non-symmetric)

Distribution in fan chart is asymmetric if risk assessment is either skewed upside or downside

## Literatures

- Theory on incorporating asymmetric risks to forecasts using two-piece Normal distribution
  - ✓ by M. Blix and P. Sellin in 1998 – application in Indian context discussed by N. Banerjee and A. Das in 2011
- Methodology for fan chart for government deficit and debt ratios over medium-term
- Bayesian fan charts
- Quantification of skewness in fan charts by assessing probability of future dip using probit model

# The Forecasting Distribution

Join halves of two Normal distributions with same mode but different standard deviations

$$f(x) = \begin{cases} C \exp\left[-\frac{1}{2}\left(\frac{x-\mu}{\sigma_1}\right)^2\right], & \text{if } -\infty < x \leq \mu \\ C \exp\left[-\frac{1}{2}\left(\frac{x-\mu}{\sigma_2}\right)^2\right], & \text{if } x > \mu \end{cases}$$

$$\text{with } C = \frac{\sqrt{2}}{\sqrt{\pi}(\sigma_1 + \sigma_2)}, \quad -\infty < \mu < \infty, \sigma_1, \sigma_2 > 0$$

$$\text{Balance of Risk } p = P[X \leq \mu] = \frac{\sigma_1}{\sigma_1 + \sigma_2}$$

## Confidence Interval for fan chart

Quantile  $k$  of the distribution:

$$k = \begin{cases} \mu + \sigma_1 \Phi^{-1}\left(\frac{\alpha}{C\sqrt{2\pi}\sigma_1}\right), & \text{if } \alpha \leq p \\ \mu + \sigma_2 \Phi^{-1}\left(\frac{\alpha + C\sqrt{2\pi}\sigma_2 - 1}{C\sqrt{2\pi}\sigma_2}\right), & \text{if } \alpha > p \end{cases}, \quad 0 \leq \alpha \leq 1$$

# Construction

$\mu_{xt}$

$p$

$\gamma$

$\sigma$

$\sigma_1, \sigma_2$

$k$

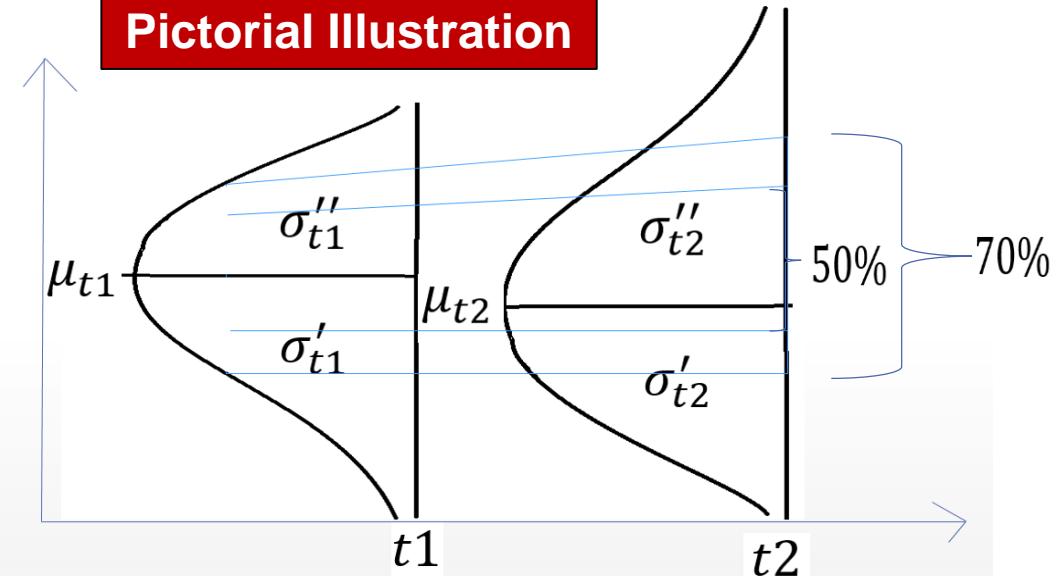

- Forecast for time  $t$

- Balance of risk based on judgement/ data-driven

- Skewness parameter  $\gamma = \frac{2p-1}{1-2p+2p^2}$

- $\sigma = \sqrt{\frac{1}{T-1} \sum_{t=1}^{T-1} (x_t - \mu_{xt})^2}, \quad x_t = \text{actual at time } t$

## Pictorial Illustration

- $\sigma_1 = \frac{\sigma}{\sqrt{1-\gamma}}, \quad \sigma_2 = \frac{\sigma}{\sqrt{1+\gamma}}$

- $k = \begin{cases} \mu + \sigma_1 \Phi^{-1} \left( \frac{\alpha}{C\sqrt{2\pi}\sigma_1} \right), & \text{if } \alpha \leq p \\ \mu + \sigma_2 \Phi^{-1} \left( \frac{\alpha+C\sqrt{2\pi}\sigma_2-1}{C\sqrt{2\pi}\sigma_2} \right), & \text{if } \alpha > p \end{cases}, \quad 0 \leq \alpha \leq 1$

## Way Forward – Bivariate Fan Chart

- Macroeconomic variables of interest are inter-dependent – literature contains limited work on dimensional extension of fan charts
- M. Blix and P. Sellin in 2000 derived bivariate fan chart of inflation and output
  - ✓ opined that bivariate framework allows for arriving at forecast of a variable conditional on information on other
  - ✓ estimating confidence bands from econometric forecasting model itself, is not possible as multiple models are used, specific information related to particular forecast period and important subjective judgments cannot be incorporated
  - ✓ assumed that error distribution of inflation and output forecasts are separately two-piece Normal and linked the standardized form of these variables into a standard Bivariate Normal (BN) distribution through an estimated correlation coefficient; then, derived conditional distribution of one variable given another
- **Alternative:** Initial assumption of joint distribution of two variables

# Initial Thoughts

What is a Bivariate Fan Chart? – Joint error distribution around two-dimensional forecast coordinate

Why a Bivariate Fan Chart?

- impact of movement of one variable on future path of other
- known information on forecast error of one variable
  - ✓ may improve forecast of other variable – useful when information on variables are published at different lags

Framework

- $(X, Y) \sim$  Bivariate Normal
- Join halves of 2 different Bivariate Normal distributions
- Each halve has its own set of variance matrix
- Forecasts of  $X$  and  $Y$  for a period are  $\mu_x$  and  $\mu_y$ , respectively – forecast coordinate  $(\mu_x, \mu_y)$

# Bivariate Fan Chart – Methodology

## Handling Asymmetry

- Asymmetry in risks associated to forecast coordinates  $(\mu_x, \mu_y)$ 
  - ✓ different in each of the four quadrants of  $(X, Y)$  plane
- Join sections of two Bivariate Normal distributions

$$BN(\mu_x, \mu_y, \sigma_{1x}, \sigma_{1y}, \rho) \quad \text{and} \quad BN(\mu_x, \mu_y, \sigma_{2x}, \sigma_{2y}, \rho)$$

- ✓ same modal coordinate  $(\mu_x, \mu_y)$ ,  $-\infty < \mu_x, \mu_y < \infty$
- ✓ same correlation coefficient  $\rho$ ,  $-1 \leq \rho \leq 1$
- ✓  $\sigma_{1x}(> 0), \sigma_{1y}(> 0)$  in first distribution
- ✓  $\sigma_{2x}(> 0), \sigma_{2y}(> 0)$  in second distribution

## Bivariate Fan Chart – Methodology.....contd.

The Cut Line Equation – Equation of line to cut distribution into two pieces

- x-axis, y-axis with  $x, y \in \mathbb{R}$  and z-axis for probability with  $0 \leq z \leq 1$
- Which half of distribution is to be taken?
- Cut line may either be aligned to x-axis, y-axis or at any other angle
- A general cut line  $(y - \mu_y) = m(x - \mu_x)$ ,  $x, y \in \mathbb{R}$  may be used
  - ✓ slope of cut line is  $m \in \mathbb{R}$
- Join pieces of  $BN(\mu_x, \mu_y, \sigma_{1x}, \sigma_{1y}, \rho)$  and  $BN(\mu_x, \mu_y, \sigma_{2x}, \sigma_{2y}, \rho)$

## Bivariate Fan Chart – Methodology.....contd.

### Probability Distribution Function

$$f(x, y) = \begin{cases} C \exp \left[ -\frac{1}{2(1-\rho^2)} \left\{ \left( \frac{x - \mu_x}{\sigma_{1x}} \right)^2 - 2\rho \left( \frac{x - \mu_x}{\sigma_{1x}} \right) \left( \frac{y - \mu_y}{\sigma_{1y}} \right) + \left( \frac{y - \mu_y}{\sigma_{1y}} \right)^2 \right\} \right], \\ \quad \text{if } (y - \mu_y) \leq m(x - \mu_x), \quad x, y \in \mathbb{R} \\ C \exp \left[ -\frac{1}{2(1-\rho^2)} \left\{ \left( \frac{x - \mu_x}{\sigma_{2x}} \right)^2 - 2\rho \left( \frac{x - \mu_x}{\sigma_{2x}} \right) \left( \frac{y - \mu_y}{\sigma_{2y}} \right) + \left( \frac{y - \mu_y}{\sigma_{2y}} \right)^2 \right\} \right], \\ \quad \text{if } (y - \mu_y) > m(x - \mu_x), \quad x, y \in \mathbb{R} \end{cases}$$

$C$  is a constant such that  $\int_{-\infty}^{\infty} \int_{-\infty}^{\infty} f(x, y) dx dy = 1$

Balance of Risks (BOR) – the Highest risk to forecast coordinate in quadrant with the highest BOR

$$\begin{aligned} \text{BOR in quadrant } -1, \quad p(1) &= P\{X > \mu_x, Y > \mu_y + m(x - \mu_x)\} \\ \text{BOR in quadrant } -2, \quad p(2) &= P\{X \leq \mu_x, Y > \mu_y + m(x - \mu_x)\} \\ \text{BOR in quadrant } -3, \quad p(3) &= P\{X \leq \mu_x, Y \leq \mu_y + m(x - \mu_x)\} \\ \text{BOR in quadrant } -4, \quad p(4) &= P\{X > \mu_x, Y \leq \mu_y + m(x - \mu_x)\} \end{aligned}$$

## Bivariate Fan Chart – Methodology.....contd.

**Alternate Parametrization**  $f(x, y) = \begin{cases} BN\left(\mu_x, \mu_y, \frac{\sigma_x}{\sqrt{(1-\gamma_x)}}, \frac{\sigma_y}{\sqrt{(1-\gamma_y)}}, \rho\right), & \text{if } (y - \mu_y) \leq m(x - \mu_x) \\ BN\left(\mu_x, \mu_y, \frac{\sigma_x}{\sqrt{(1+\gamma_x)}}, \frac{\sigma_y}{\sqrt{(1+\gamma_y)}}, \rho\right), & \text{if } (y - \mu_y) > m(x - \mu_x) \end{cases} x, y \in \mathbb{R}$

$\gamma_x$  and  $\gamma_y$  are inverse skewness indicators,  $\sigma_x$  and  $\sigma_y$  are uncertainty parameters.

### Solving for parameters

$$\sigma_{1x} = \frac{\sigma_x}{\sqrt{1 - \gamma_x}}, \quad \sigma_{1y} = \frac{\sigma_y}{\sqrt{1 - \gamma_y}},$$

$$p_x = \frac{\sigma_{1x}}{\sigma_{1x} + \sigma_{2x}} \Rightarrow \gamma_x = \frac{2p_x - 1}{1 - 2p_x + 2p_x^2},$$

$$\sigma_{2x} = \frac{\sigma_x}{\sqrt{1 + \gamma_x}}, \quad \sigma_{2y} = \frac{\sigma_y}{\sqrt{1 + \gamma_y}}$$

$$p_y = \frac{\sigma_{1y}}{\sigma_{1y} + \sigma_{2y}} \Rightarrow \gamma_y = \frac{2p_y - 1}{1 - 2p_y + 2p_y^2}$$

$$\sigma_x \text{ proxied by } \sigma_x^* = \sqrt{\frac{1}{T-1} \sum_{t=1}^{T-1} (x_t - \mu_{xt})^2}$$

$$\sigma_y \text{ proxied by } \sigma_y^* = \sqrt{\frac{1}{T-1} \sum_{t=1}^{T-1} (y_t - \mu_{yt})^2}$$

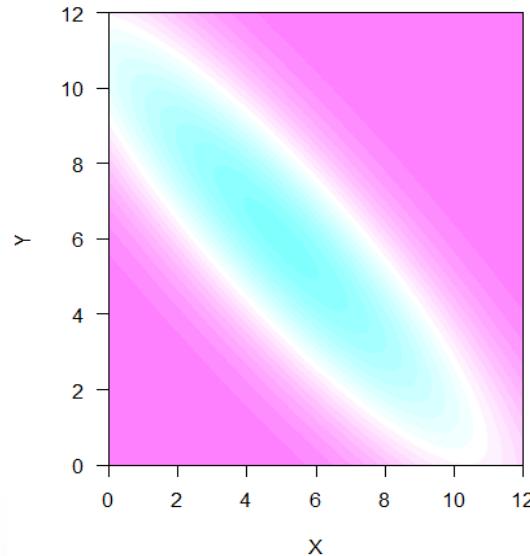

$\mu_{xt}$ and $\mu_{yt}$	=	forecasts of $X$ and $Y$ , respectively for $t$
$x_t$ and $y_t$	=	realized values of $X$ and $Y$ , respectively at $t$
$T$	=	number of periods considered from history

$$\rho \text{ proxied by } \rho^* = \frac{\sum_{t=1}^{T-1} (x_t - \bar{x})(y_t - \bar{y})}{\sqrt{\sum_{t=1}^{T-1} (x_t - \bar{x})^2} \sqrt{\sum_{t=1}^{T-1} (y_t - \bar{y})^2}}$$

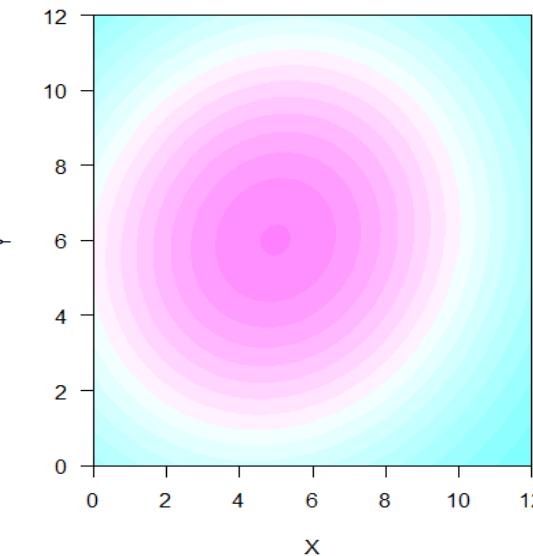

## Bivariate Fan Chart – Methodology.....contd.

- Confidence bands for bivariate distribution is a set of equi-probability contours
  - ✓ an equi-probability contour joins all coordinates with same probability
- Consider all coordinates  $(x, y)$  for which density is same, say  $\delta$ 
  - ✓ solving this equation, equi-probability contour can be derived
- Thus, for constructing bivariate fan chart, values of seven parameters required
  - ✓ baseline forecasts  $(\mu_x, \mu_y)$ , uncertainties  $\sigma_x, \sigma_y$ , balance of risks  $p_x, p_y$  and correlation coefficient  $\rho$
- Conditional Distribution
  - ✓ Given known information on  $X$ , distribution of  $Y$  derived as  $f_Y(y|x) = \frac{f(x,y)}{g(x)}$
  - ✓ mean of conditional (revised forecast of  $Y$ ) expected to be better than original forecast  $\mu_y$
- Quantile from Conditional Distribution → Conditional fan chart for  $Y$

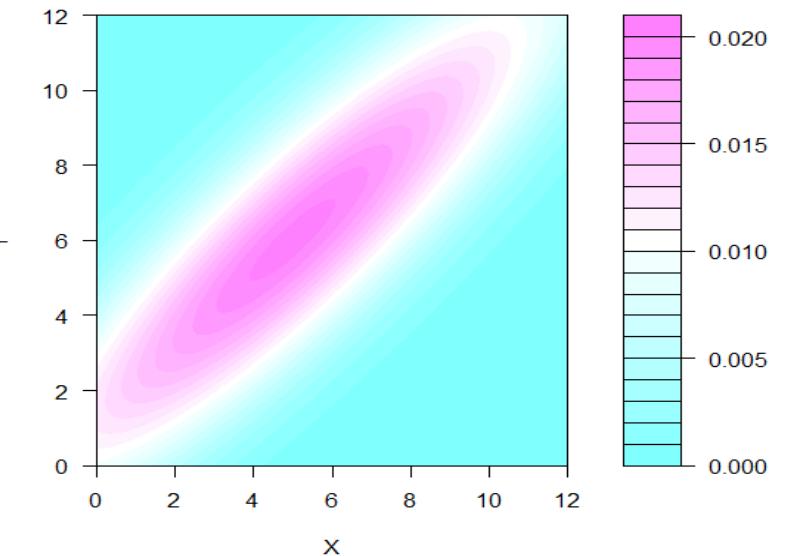

# Bivariate Fan Chart – Contours for Demonstration

$\sigma_{1x} = \sigma_{2x}, \sigma_{1y} = \sigma_{2y}, \rho = -0.9$   
Bias in 2<sup>nd</sup> and 4<sup>th</sup> quadrants  
Opposite risks to forecasts

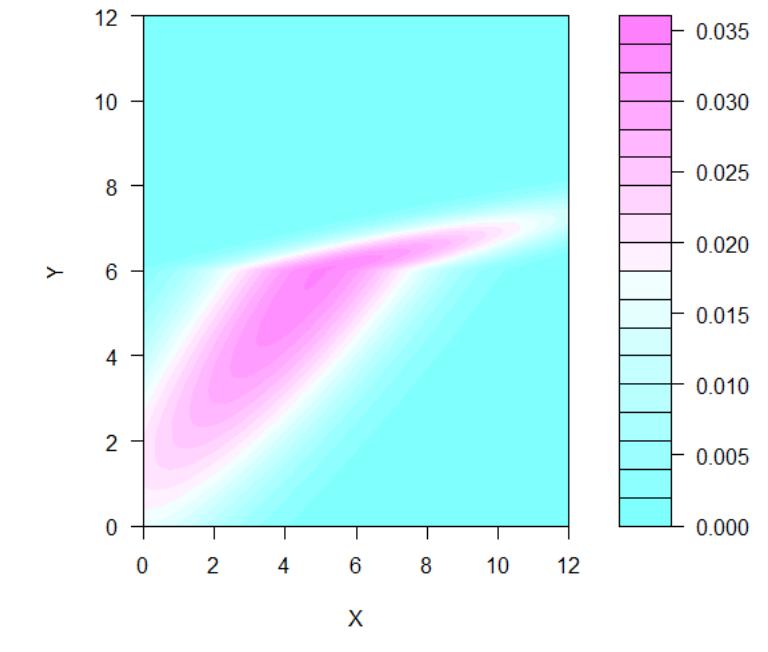

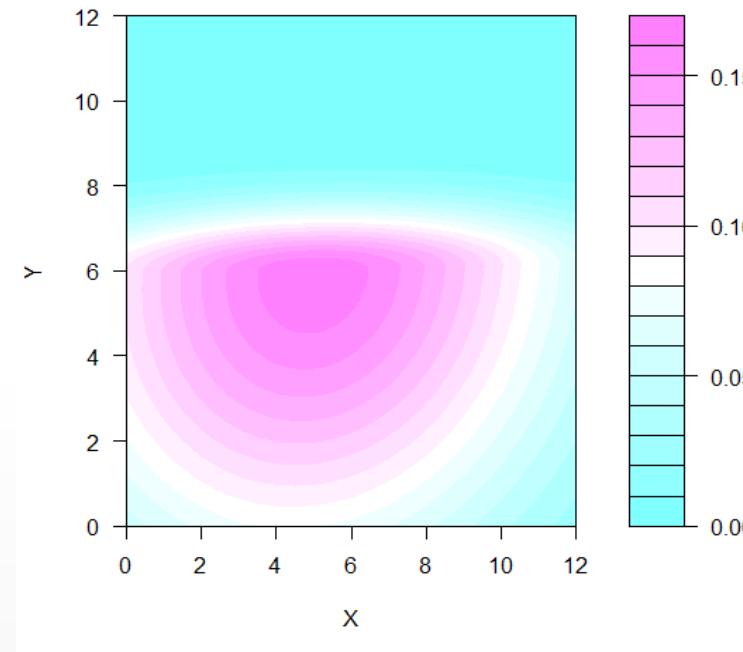

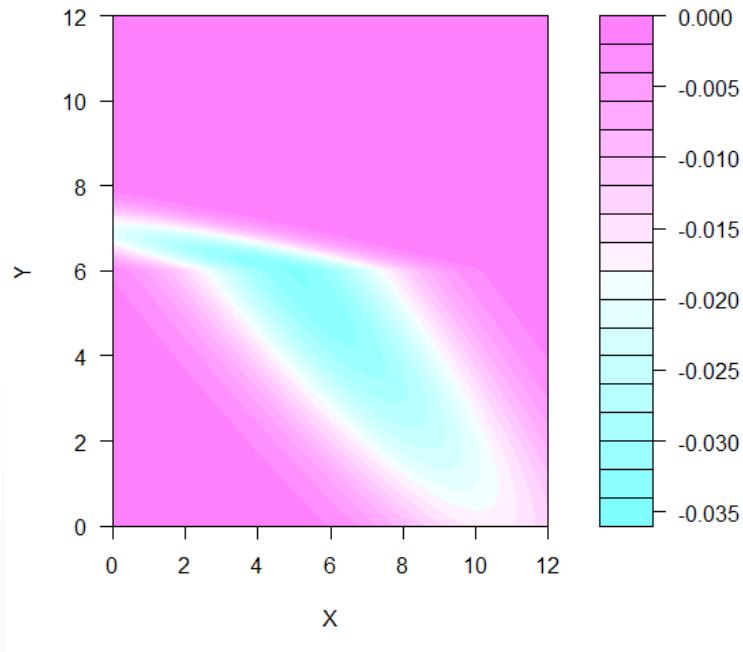

$\sigma_{1x} = \sigma_{2x}, \sigma_{1y} = \sigma_{2y}, \rho = 0.1$   
Risk symmetric in all quadrants

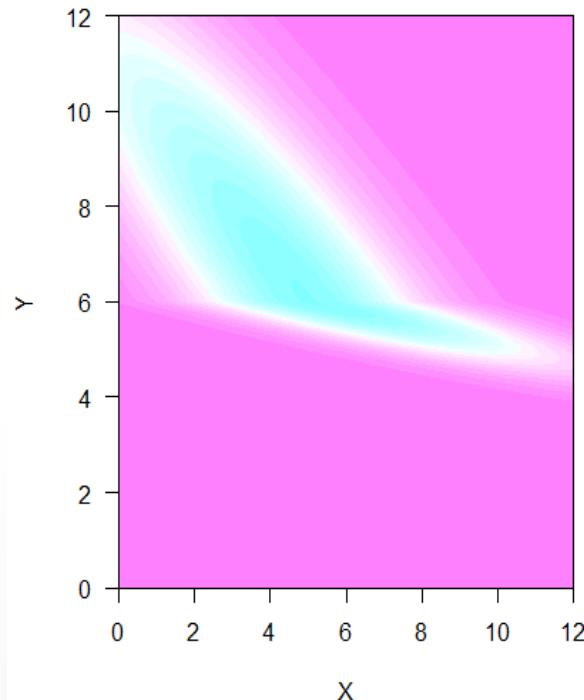

$\sigma_{1x} = \sigma_{2x}, \sigma_{1y} = \sigma_{2y}, \rho = 0.9$   
Bias in 1<sup>st</sup> and 3<sup>rd</sup> quadrants  
Unidirectional risks to forecasts

## Bivariate Fan Chart – Contours for Demonstration.....contd.

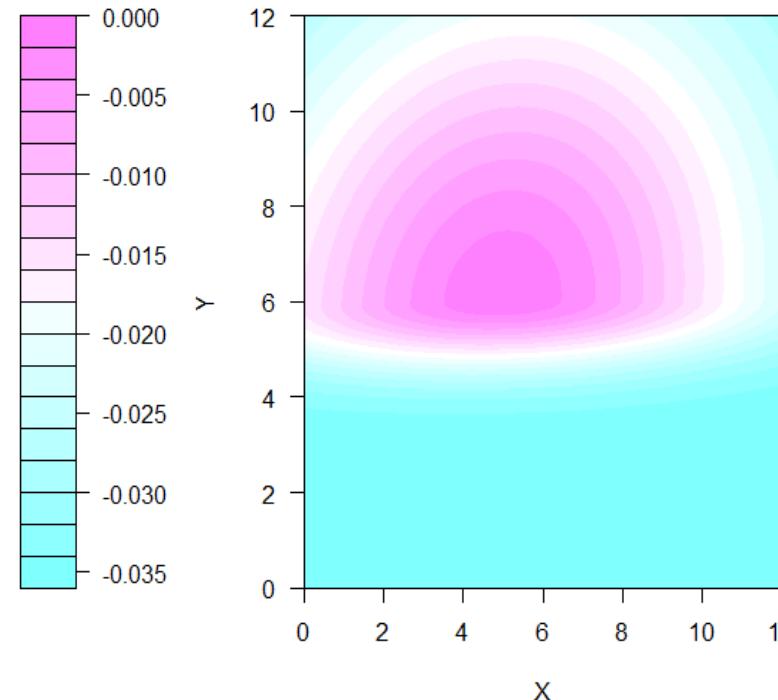

## Bivariate Fan Chart – Contours for Demonstration.....contd.

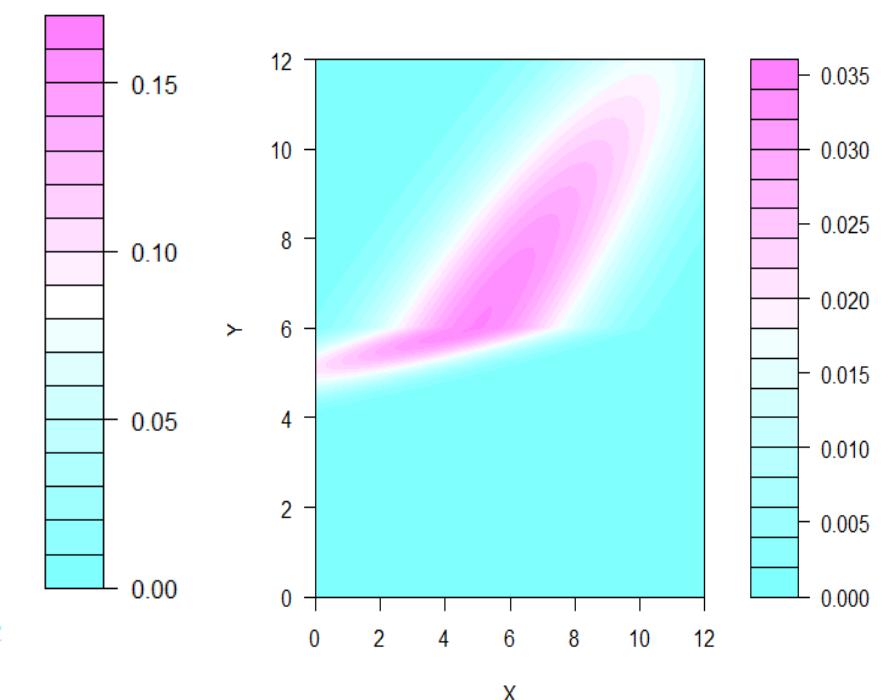

$\sigma_{1x} = \sigma_{2x}, \sigma_{1y} < \sigma_{2y}, \rho = -0.9$   
Bias in 2<sup>nd</sup> quadrant

Downside risk to  $X$  and upside risk to  $Y$

$\sigma_{1x} = \sigma_{2x}, \sigma_{1y} < \sigma_{2y}, \rho = 0.1$   
Bias in 1<sup>st</sup> and 2<sup>nd</sup> quadrants

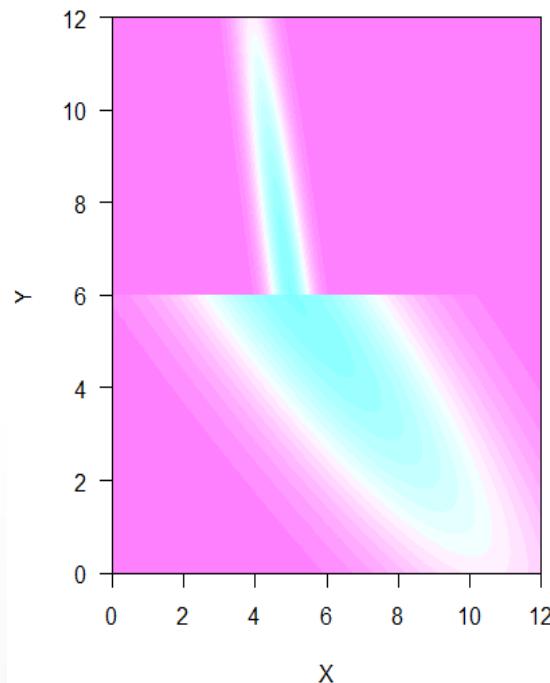

Balanced risk to  $X$  and upside risk to  $Y$

$\sigma_{1x} = \sigma_{2x}, \sigma_{1y} < \sigma_{2y}, \rho = 0.9$   
Bias in 1<sup>st</sup> quadrant

Upside risk to both  $X$  and  $Y$

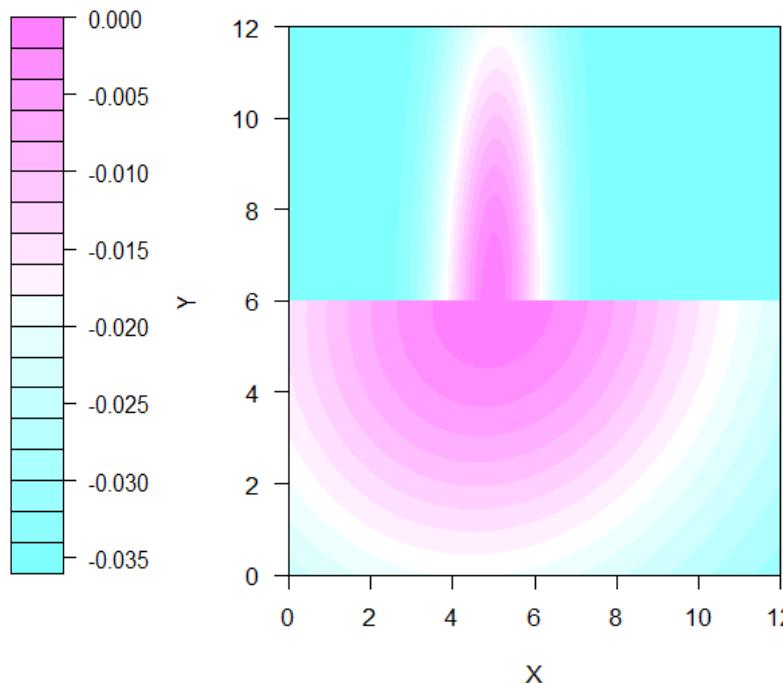

## Bivariate Fan Chart – Contours for Demonstration.....contd.

$$\sigma_{1x} > \sigma_{2x}, \sigma_{1y} = \sigma_{2y}, \rho = -0.9$$

Bias in 4<sup>th</sup> quadrant

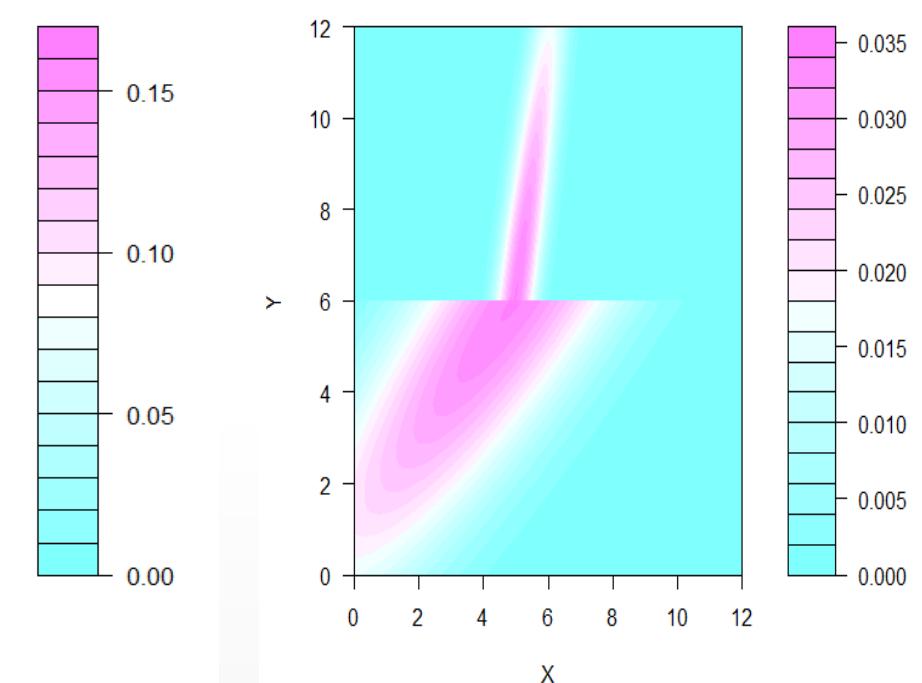

Upside risk to  $X$  and downside risk to  $Y$

$$\sigma_{1x} > \sigma_{2x}, \sigma_{1y} = \sigma_{2y}, \rho = 0.1$$

Bias in 3<sup>rd</sup> and 4<sup>th</sup> quadrants

Balanced risk to  $X$  and downside risk to  $Y$

$$\sigma_{1x} > \sigma_{2x}, \sigma_{1y} = \sigma_{2y}, \rho = 0.9$$

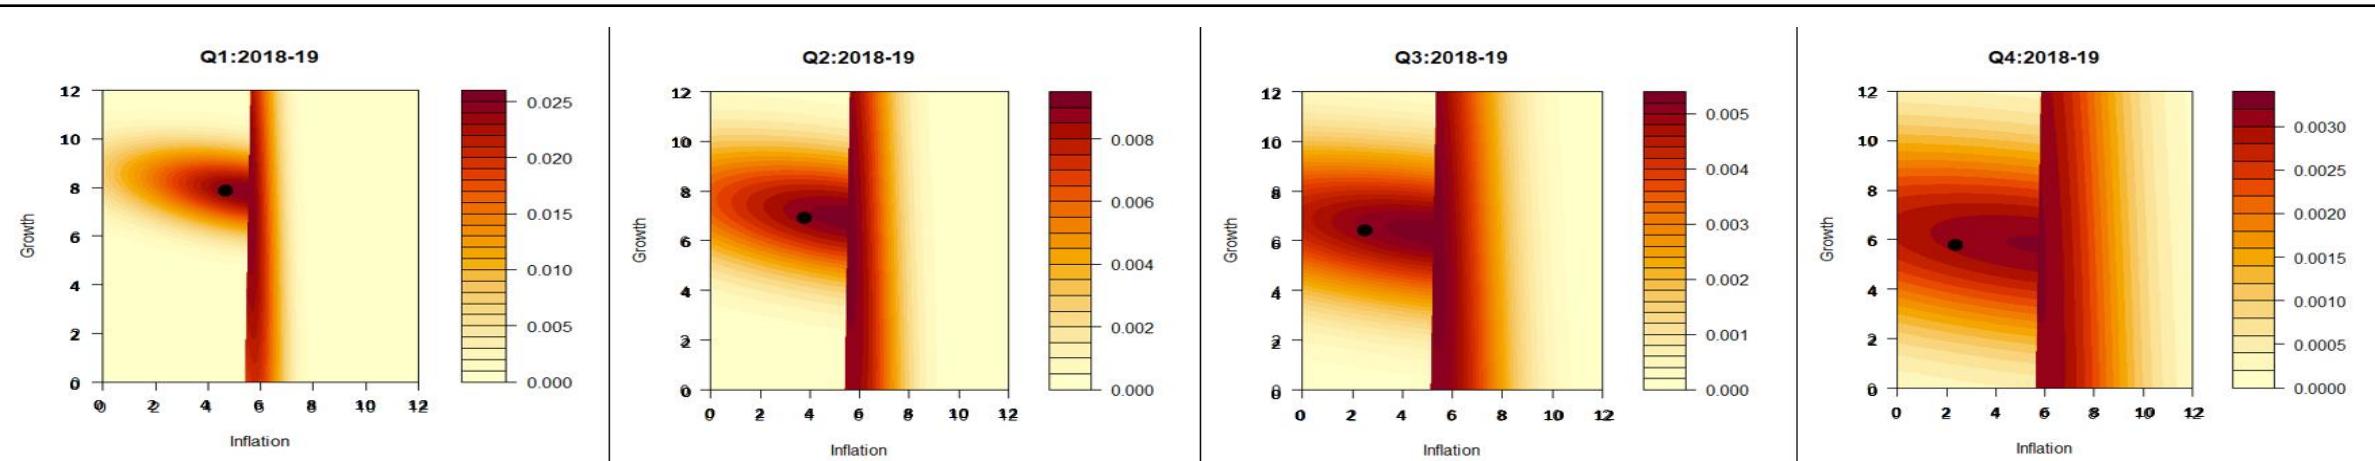

Bias in 3<sup>rd</sup> quadrant

Downside risk to both  $X$  and  $Y$

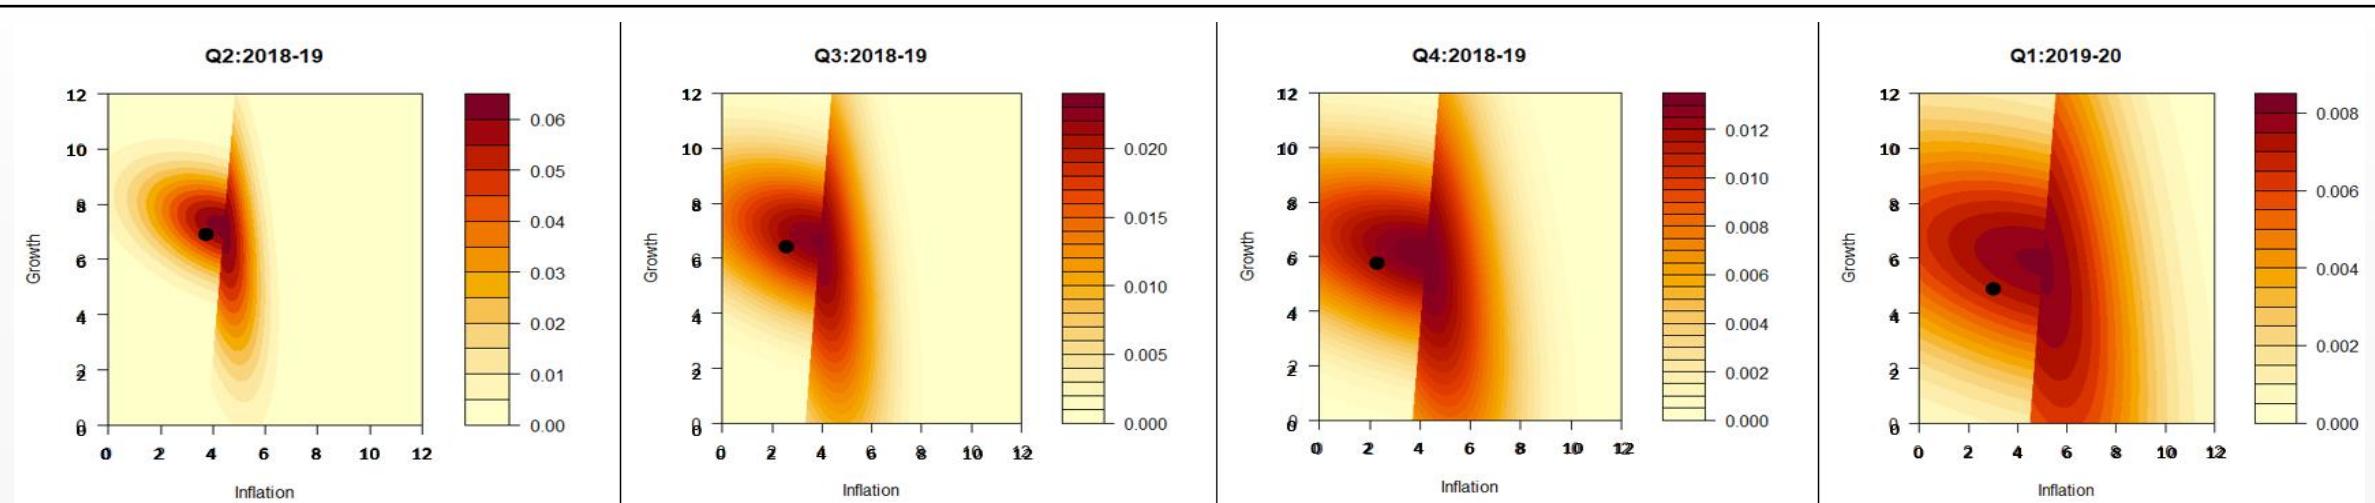

# Numerical Illustration

**Q1:2018-19 to Q4:2018-19**  $p_x = 0.2, p_y = 0.9, \theta = 89^\circ$

● indicates actual inflation and growth coordinate  $(x, y)$

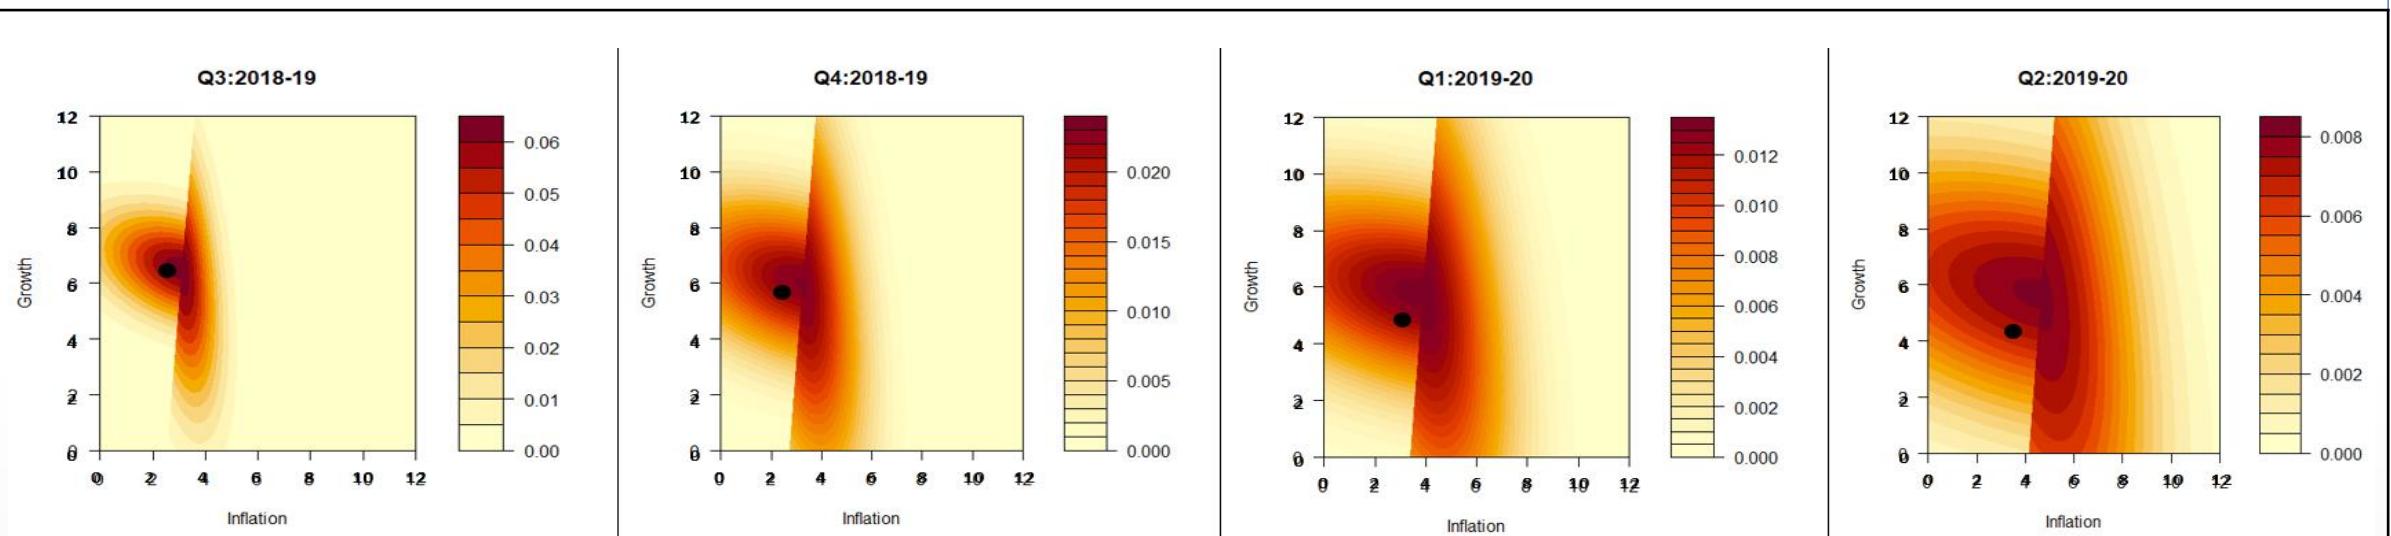

**Q2:2018-19 to Q1:2019-20**  $p_x = 0.3, p_y = 0.7, \theta = 85^\circ$

## Numerical Illustration.....contd.

Q3:2018-19 to Q2:2019-20     $p_x = 0.3$ ,  $p_y = 0.7$ ,  $\theta = 85^\circ$

● indicates actual inflation and growth coordinate  $(x, y)$

## Numerical Illustration.....contd.

Quarter	$\theta$	$p_x$	$p_y$	Average absolute deviation (basis points) from actual growth		Average absolute deviation (basis points) of actual growth from central path		Average Width (basis points) of confidence band		
				Univariate fan	Conditional fan	Univariate fan	Conditional fan	Band (per cent)	Univariate fan	Conditional fan
Q1:2018-19 to Q4:2018-19	$89^\circ$	0.2	0.9	14.3	6.1	1341.2	7.9	50	1791.9	278.9
								70	2689.9	428.6

								70	857.9	506.9
								90	1342.3	1078.8

## Conclusion

- In the current scenario of uncertainty, Central Bank's communication plays a crucial role
- Univariate fan chart is a traditional way of communicating uncertainty around forecasts
  - ✓ Central Banks publish fan charts to communicate the risks/ uncertainty associated to forecasts of macroeconomic variables – inflation and growth
- Bivariate fan chart can be an improvement in the manner of communication
  - ✓ can be used for representing error bands – for forecasts of two linearly related variables
  - ✓ it incorporates the asymmetric risks to forecast coordinates
  - ✓ suitable when information of two variables released at different lags
  - ✓ conditional fan chart can be derived for one variable given information on other
  - ✓ additional information on one variable refines the forecast of the other

# OUR APPROACH TO SOCIAL MEDIA

[CONSTANTLY  
EVOLVING]

## MORE ANALYTICAL

Make use of social media analytical tools and use that information for future campaigns

## MORE EDITORIAL

Make use of relatable content and more contextual approaches

## MORE HUMAN

Humanize communication by striking the right tone and seeking for opportunities to engage

## MORE SOCIAL

Intensify communication across social media channels and be sensible to your targets and audiences on each social platform

# SOME CONTENT CAMPAIGNS

# 2021 IN NUMBERS

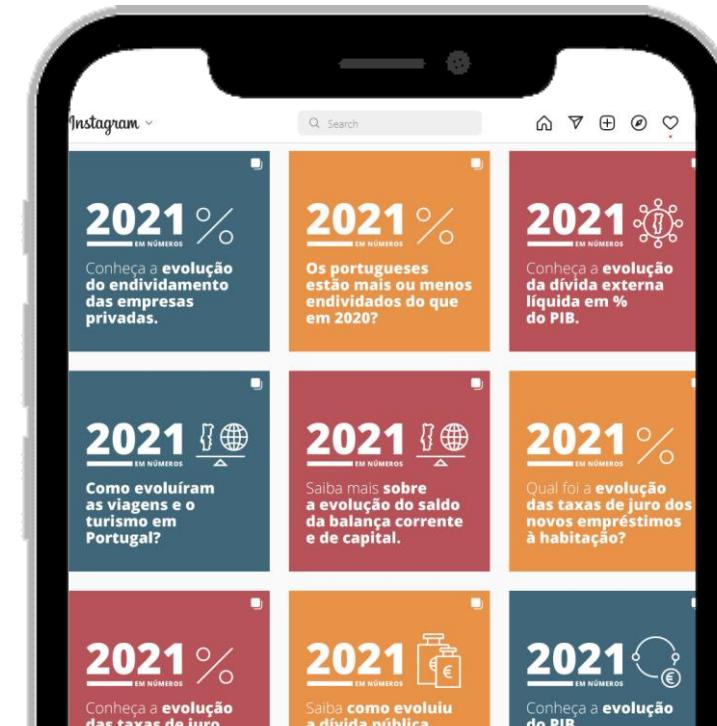

#1 Carrousel posts

#2 Statistical figures of 2021

#3 Curated content: we've only selected the figures more related to our audiences.

# ENGAGING CONTENT

- #1 Started using Instagram polls
- #2 Relatable content like tourism, travels
- #3 Opportunity to link users to other content

# DIFFERENT FORMATS

#1 Article posts (decoders)

#2 Podcasts

#3 Videos

The collage illustrates three different formats for disseminating statistical information:

- Video:** A thumbnail from a video showing four people in an office setting, one holding a document. The video player interface shows 0:06 / 3:48.
- Graph:** A line graph showing a downward trend in a metric from 2006 to 2020. The graph includes data points with labels: 2006 (~310), 2007 (~330), 2008 (~340), 2009 (~310, labeled -8.9%), 2010 (~330), 2011 (~310), 2012 (~300), 2013 (~300), 2014 (~310), 2015 (~320), 2016 (~330), 2017 (~350), 2018 (~370), 2019 (~390), and 2020 (~360, labeled -9.7%). A caption at the bottom states: "Esta redução superou a diminuição observada em 2009, na altura da crise financeira internacional".
- Podcast:** A cover for a podcast episode titled "Estatísticas em tempo de pandemia" by Ana Paula Serra, Administradora. The cover features a portrait of Ana Paula Serra and the BdP logo.

# TAKEAWAYS

## MAIN TAKEAWAYS

- #1 Choose your social media channels aligned with your **strategy**
- #2 **Relatable** content is king
- #3 Use **analytics** to guide you along the way

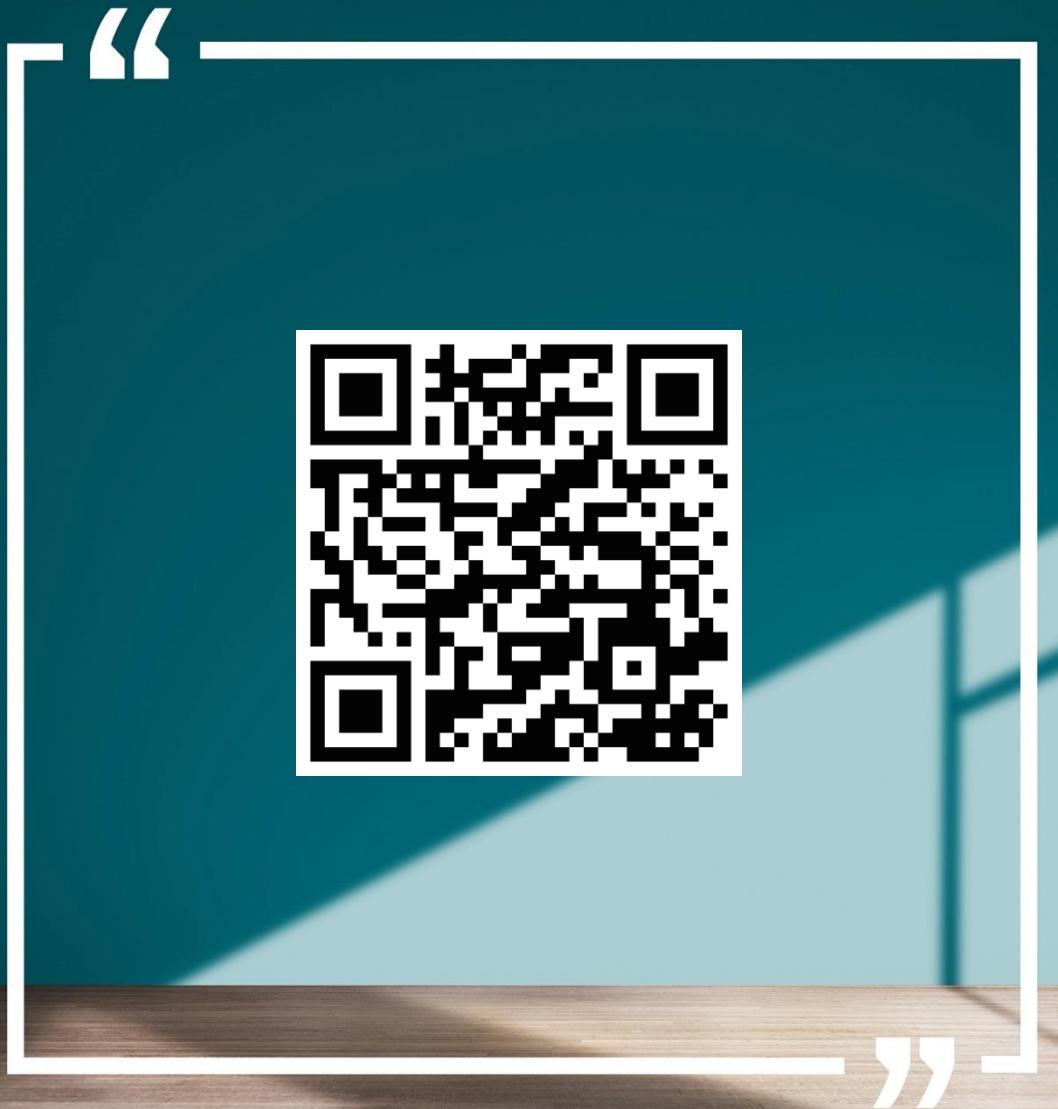

- #4 Video and visual is key.
- #5 Engage and dialogue.
- #6 Humanize communication by striking the right tone

BUT, MOST IMPORTANLY

Social media is  
like music, you  
don't know a  
song by heart  
until you've  
heard the lyrics  
over and over

This sentence has five words. Here are five more words. Five-word sentences are fine. But several together become monotonous. Listen to what is happening. The writing is getting boring. The sound of it drones. It's like a stuck record. The ear demands some variety.

Now listen. I vary the sentence length, and I create music. Music. The writing sings. It has a pleasant rhythm, a lilt, a harmony. I use short sentences. And I use sentences of medium length. And sometimes, when I am certain the reader is rested, I will engage him with a sentence of considerable length, a sentence that burns with energy and builds with all the impetus of a crescendo, the roll of the drums, the crash of the cymbals—sounds that say listen to this, it is important.

So write with a combination of short, medium, and long sentences. Create a sound that pleases the reader's ear. Don't just write words. Write music.

GARY PROVOST

analysis

According to the survey conducted between 23 November and 15 December 2021 among Italian industrial and service firms with 50 or more employees, opinions regarding the general economic situation in the fourth quarter of 2021 and their own operating conditions in the first quarter of the new year are less favourable compared with the previous survey. Demand dynamics are expected to remain robust, but delays in supply chains and the resurgence of the pandemic will likely entail downside risks to the activity of more than one in two firms.

The assessments of investment conditions have become more moderate: the balance between assessments of an improvement and of a worsening remained positive, though it narrowed to less than one third of the levels recorded in the survey conducted between August and September. Investment is expected to expand further in 2022, though at a slower pace than in the previous year. Employment is set to continue to grow in the first quarter of 2022.

Firms revised significantly upwards their selling prices in the last quarter of 2021 and their expectations for consumer price inflation in Italy have risen well above the 2 per cent threshold across all time horizons (12-month expectations have reached 3.2 per cent). The recent increases in energy prices and supply chain difficulties will likely lead to a rise in firms' selling prices over the next twelve months.

(1) The shaded areas represent the 95% confidence intervals. Construction firms are included from 2013 Q1. See tabs. s1 and s4 of the statistical appendix.

# Statistical Data Warehouse (Base dati statistica - BDS)

Follows the Statistics series structure

Requires some economic/statistics skills

BDS is not perfectly fit for microdata (yet including some aggregates from survey data)

Specialistic language

Bank of Italy - Statistical Database

At least one word ▾

Search in the contents...

Main indicators

Topics

- + Banks and Financial Institutions: Credit Conditions and Risk by Sector and Geographical Area
- + Banks and Financial Institutions: Financing and Funding by Sector and Geographical Area
- + Banks and Financial Institutions: Branch Network
- + Tables no longer updated - Structure and operations of banks and other financial intermediaries (Statistical bulletin)
- + Banks and Money: National Data
- + The Financial Market
- + Financial Accounts
- + Balance of Payments and International investment position (sixth edition of the IMF BOP and IIP Manual)
- + Public Finance: Borrowing Requirement and Debt
- + Local Government Debt
- + Public Finance Statistic in the European Union
- + International Monetary Fund's Special Data Dissemination Standard Plus (SDDS Plus) statistics
- + Payment system
- + Surveys on household income and wealth
- + Historical tables - Monetary and financial indicators

[link](#)

# Some single initiatives

## Survey of Industrial and Service Firms

Statistics

Since 16 January 2017 the Bank of Italy's statistical data have been published in the 'Statistics' series with a new layout and renewed content. For further details consult the page [Statistics series](#).  
Each year the survey gathers information on investments, gross sales, workforce and other economic variables relating to Italian industrial and service firms with 20 or more employees.  
Further details are available in the [Methodological notes](#).

### Latest reports

- [Survey of Industrial and Service Firms in 2021](#)  
Statistics  
1 July 2022

[Link](#)  
[OECD](#)

## Status quo: summing up

- Data are disseminated in different sections of the website (except BDS).
- Graphs are not interactive (except BDS)
- BDS is not on the home page and requires some skills for navigation.
- Too many steps (clicks) are necessary in order to visualise data.
- Information is presented by source, not by economic phenomenon.
- Personalisation and download of data visualisations are not always possible.
- Language is for economists.

# Goals

- 1. Widening the audience of statistical information, in particular unskilled public**  
NEW TARGET
- 2. Offering current users easier ways to access data and more opportunities for analysing and sharing information**  
EASIER AND LARGER USE
- 3. Taking advantage of the technological progress in order to improve effectiveness and efficiency of data dissemination**
- 4. Promote Banca d'Italia's statistical portfolio** NEW CONTENT
- 5. Enhance/keep high Banca d'Italia reputation**
- 6. Keep up with national and international stakeholders**

# 4 user personas

## Mario Rossi Mechanic

### Bio

Quit high school, basically skilled with computer and tablet

### Needs and goals

Wants to buy a house, and needs information for a mortgage

## Martina Neri Student

### Bio

She's writing the final dissertation on the economic impact of the energy crisis

### Needs and goals

She has to go deeper into some issues studied and prepare the material to include in her final dissertation.

## Angela Giallo

Small  
entrepreneur

### Bio

She's an accountant, carefully managing her small firm, but she is not IT skilled

### Needs and goals

Needs updated information on Italian economy, to correctly steer her activity and take decisions for the family

## Paolo Verdi

Economic  
journalist

### Bio

Travels a lot for writing his articles

### Needs and goals

Would like to easy and fast download tables and graphs, using the tablet

# Tools

- ✓ New Statistics Portal NEW TARGET + NEW CONTENT
- ✓ Digital publications (with explainers and no economic interpretation) NEW TARGET [link](#)
- ✓ Interactive graphs (easy to understand, personalise, download and share) NEW TARGET + EASIER AND LARGER USE
- ✓ Dashboards NEW CONTENT [link](#)
- ✓ Diversified language EASIER USE + NEW TARGET

3 access levels

1. Entry level: Statistics Portal [all user personas]  
COMMON TERMS AND CONCEPTS
  - ✓ Easy accessible e comprehensible for unskilled users [UP 1]
  - ✓ Clearly shows the main indicators [UP 1]
2. Thematic pages ECONOMIC AND STATISTICAL DEFINITIONS
  - ✓ Digital publications [UP 2]
  - ✓ Main indicators + explainers [UP 3]
  - ✓ Links to more sophisticated tools [UP 4]
3. Dashboards [UP 3 and 4]  
SPECIALISED JARGON + METHODOLOGICAL DETAILS
  - ✓ Richer data representation
  - ✓ Updated to current situation

## IT solutions

- ✓ The Statistics Portal will be an ancillary mini website.
- ✓ Heavy re-use of BDS (in-house) technology (requires a doubling of application servers).
- ✓ Data Warehouse(s) unaltered.
- ✓ New design and features of BDS home page.
- ✓ Open source software (libraries, e.g. Apache ECharts), integrated with pre-existing software.
- ✓ Automatic and instant update of all data.

## Implications for the organisation

Structures and roles stay basically unaltered.

New software for tables, graphs and dashboards will be managed directly by statisticians and/or economists (no centralised unit).

New Editorial Board, with statisticians, economists and communication experts in order to decide new content and graphical representation.

The Research Data Center (RDC) will coordinate the design and content of all new contents on the Statistics Portal.

At first, dedicated working group for the realisation of all new content (home page, thematic pages, digital publications, dashboards).

# How will we know (if) we succeeded?

- ❖ More accesses and downloads from the website.
- ❖ Less queries asking for help for understanding and finding data.
- ❖ More harmonised look and feel.
- ❖ More graphs/tables/dashboards published in articles, papers, tweets, etc.

A central word cloud is formed by the words "thank" and "you" in large red letters. Surrounding them are numerous other words in different languages, each with its phonetic transcription in smaller text below it. The languages include German ("danke"), Chinese ("謝謝"), French ("merci"), Spanish ("gracias"), English ("thank you"), Italian ("grazie"), Portuguese ("obrigado"), Polish ("dziękuje"), Russian ("спасибо"), and many others from various continents.

Some of the visible words and their meanings are:

- danke (German)
- 谢謝 (Chinese)
- merci (French)
- gracias (Spanish)
- thank you (English)
- grazie (Italian)
- obrigado (Portuguese)
- dziękuje (Polish)
- спасибо (Russian)
- danke (German)
- 謝謝 (Chinese)
- mersi (Turkish)
- баярлалаа (Mongolian)
- faafetai lava (Fijian)
- vinaka (Fiji)
- спасиби (Bulgarian)
- blagodaram (Croatian)
- dank je (Dutch)
- misaofra (Filipino)
- matondo (Swahili)
- paldies (Latvian)
- grazzi (Slovene)
- тападх лат (Mongolian)
- хвала (Ukrainian)
- asante (Swahili)
- manana (Swahili)
- obrigada (Portuguese)
- hvala (Croatian)
- moshchakkeram (Korean)
- djiere dieuf (Senegalese)
- mochchakkeram (Korean)
- mamnun (Korean)
- go raibh maith agat (Irish)
- arigatō (Japanese)
- dakujem (Croatian)
- trugarez (Welsh)
- sukriya (Bengali)
- kop khun krap (Thai)
- ありがとう (Japanese)
- tanemirt (Arabic)
- grazie (Italian)
- arigatō (Japanese)
- 님사합니다 (Korean)
- xiexie (Chinese)
- diolch (Welsh)
- dhanyavadagalu (Kannada)
- shukriya (Urdu)
- おめでとう (Japanese)
- merci (French)

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## The BIS Data Portal project – Delivering the next generation platform for BIS statistics<sup>1</sup>

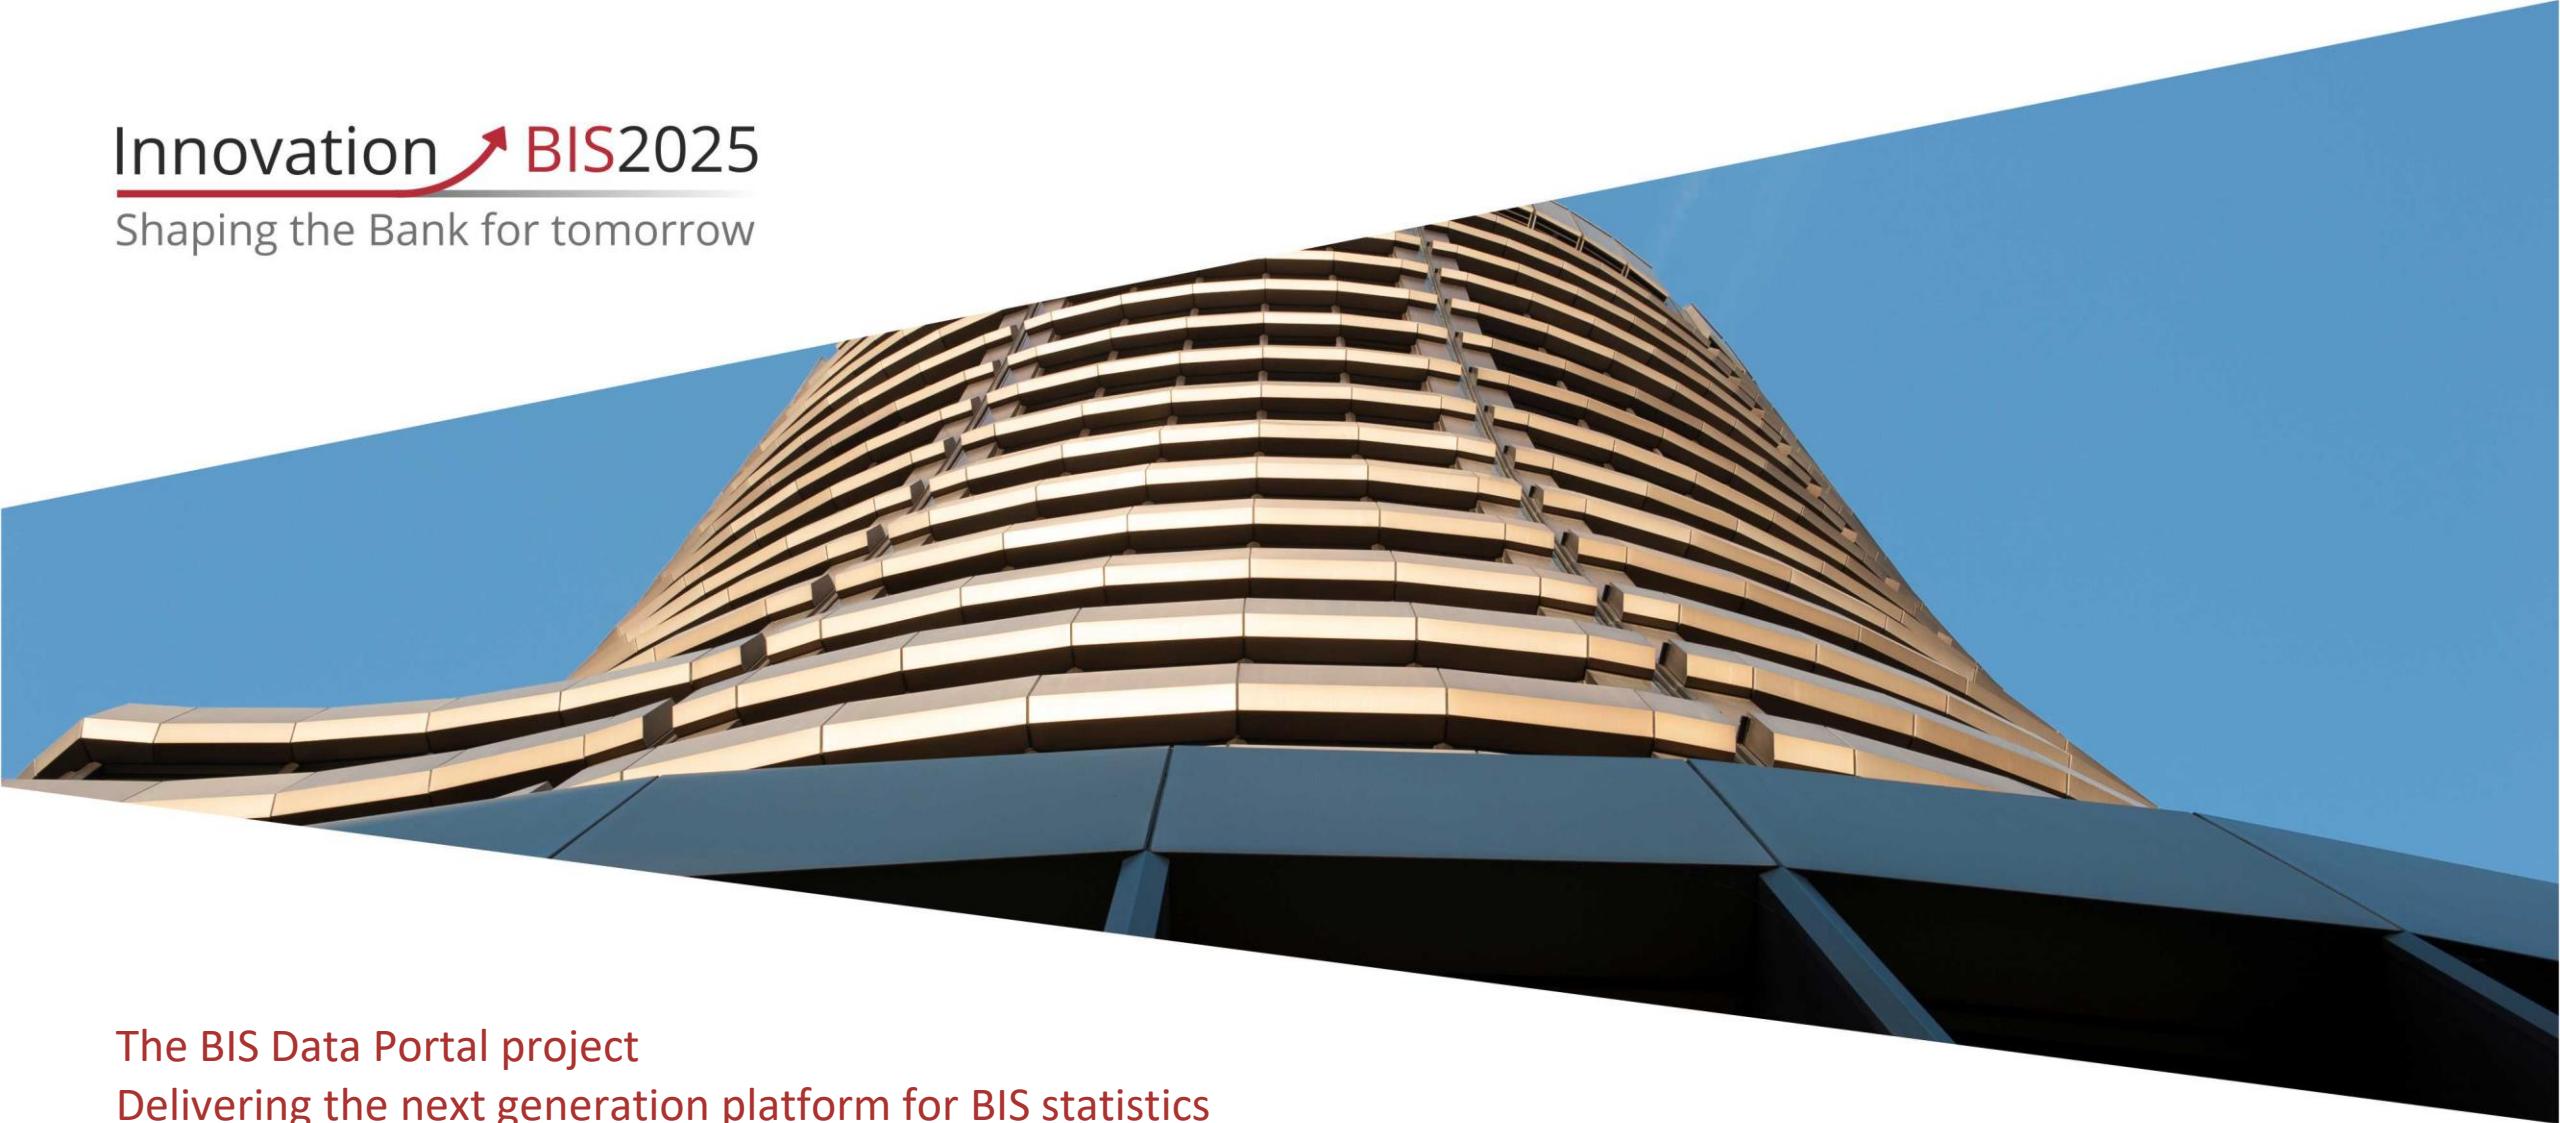

Edward Lambe and Taejin Park,  
Bank for International Settlements

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

Innovation  **BIS2025**

Shaping the Bank for tomorrow

The BIS Data Portal project

Delivering the next generation platform for BIS statistics

Edward Lambe & Taejin Park

BdP/IFC Conference on Statistical Communication, 19-20 September 2022

# Agenda

- Statistical Dissemination at the BIS
  - Current product offering
  - Achievements / Issues / risks
- Introducing the BIS Data Portal
  - Key business requirements
  - Comparative analysis
- Delivering the BIS Data Portal
  - SDMX – the Swiss Army knife!
  - Addressing business requirements
  - Technology stack
  - Lessons learned
  - Project phases
  - Pilot / go-live

## Statistical dissemination at the BIS today

# Existing Dissemination Landscape

- Public Domain:

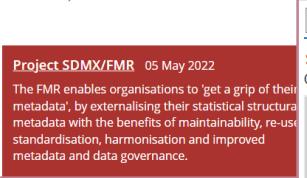

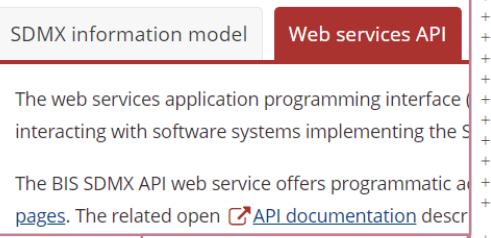

- Statistics pages on bis.org site (Comm's)
  - Statistics Explorer (Comm's)
  - Statistical Data Warehouse (MED IT)
  - SDMX Rest API (MED IT)

- Extranet / Internal:

- ## ■ DBSonline (MED IT)

## SDMX technical standards

The SDMX Technical Specification formally defines the structure of the SDMX message.

## About global liquidity indicators

The BIS uses the term "global liquidity" to refer to the ease of financing in global markets. The key indicators of global liquidity and the focus of the global liquidity indicator are indicators constitute part of the BIS's support for the G20's activities.

# Existing Dissemination Offering – Achievements / Issues / Risks

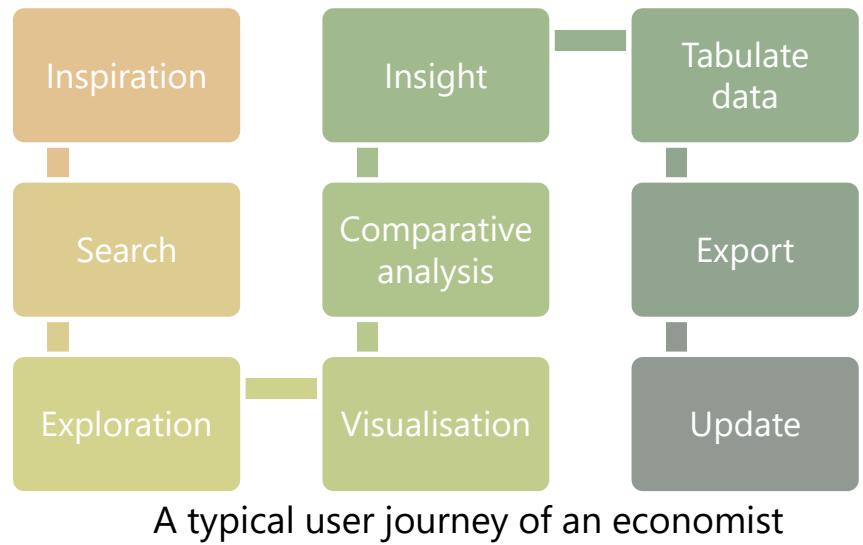

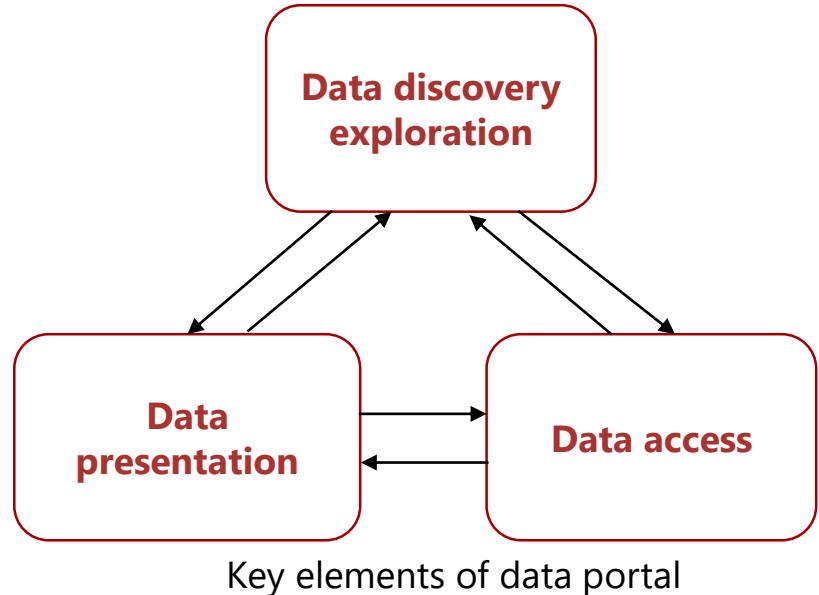

- Heterogeneous IT landscape
  - Allowing us to develop targeted applications for specific audiences / data types
  - *But has led to:*
    - *Inconsistent UX / UI*
    - *Differing technologies used across applications*
    - *Ownership across multiple teams / resource constraints*
- Many products/features added over time
  - Showing our agility to respond quickly to user needs, for example in times of crisis
  - *But has led to:*
    - *Difficulty for users to get 'holistic' view on the BIS offering*
    - *Increasing complexity & decreasing UX*
- Changing user behaviors
  - BIS statistical products continue to have high levels of user satisfaction and brand recognition
  - *But recognize that BIS customers have differing expectations and business needs depending on their expertise*

## BIS Data Portal

*'One-stop shop for BIS data'*

# Key business requirements

- **Strong linkages** among different components
  - Data discovery/exploration, presentation, access
- Provide **user journeys** for different personas
  - Economists, Statisticians, Journalists, Gen Public
  - Basic & advanced users
- “Actively” answer questions users might have to provide quick **economic insights**, eg,
  - What is topical?
  - What are the keywords to search?
  - What is the key measure?
  - What are related data?

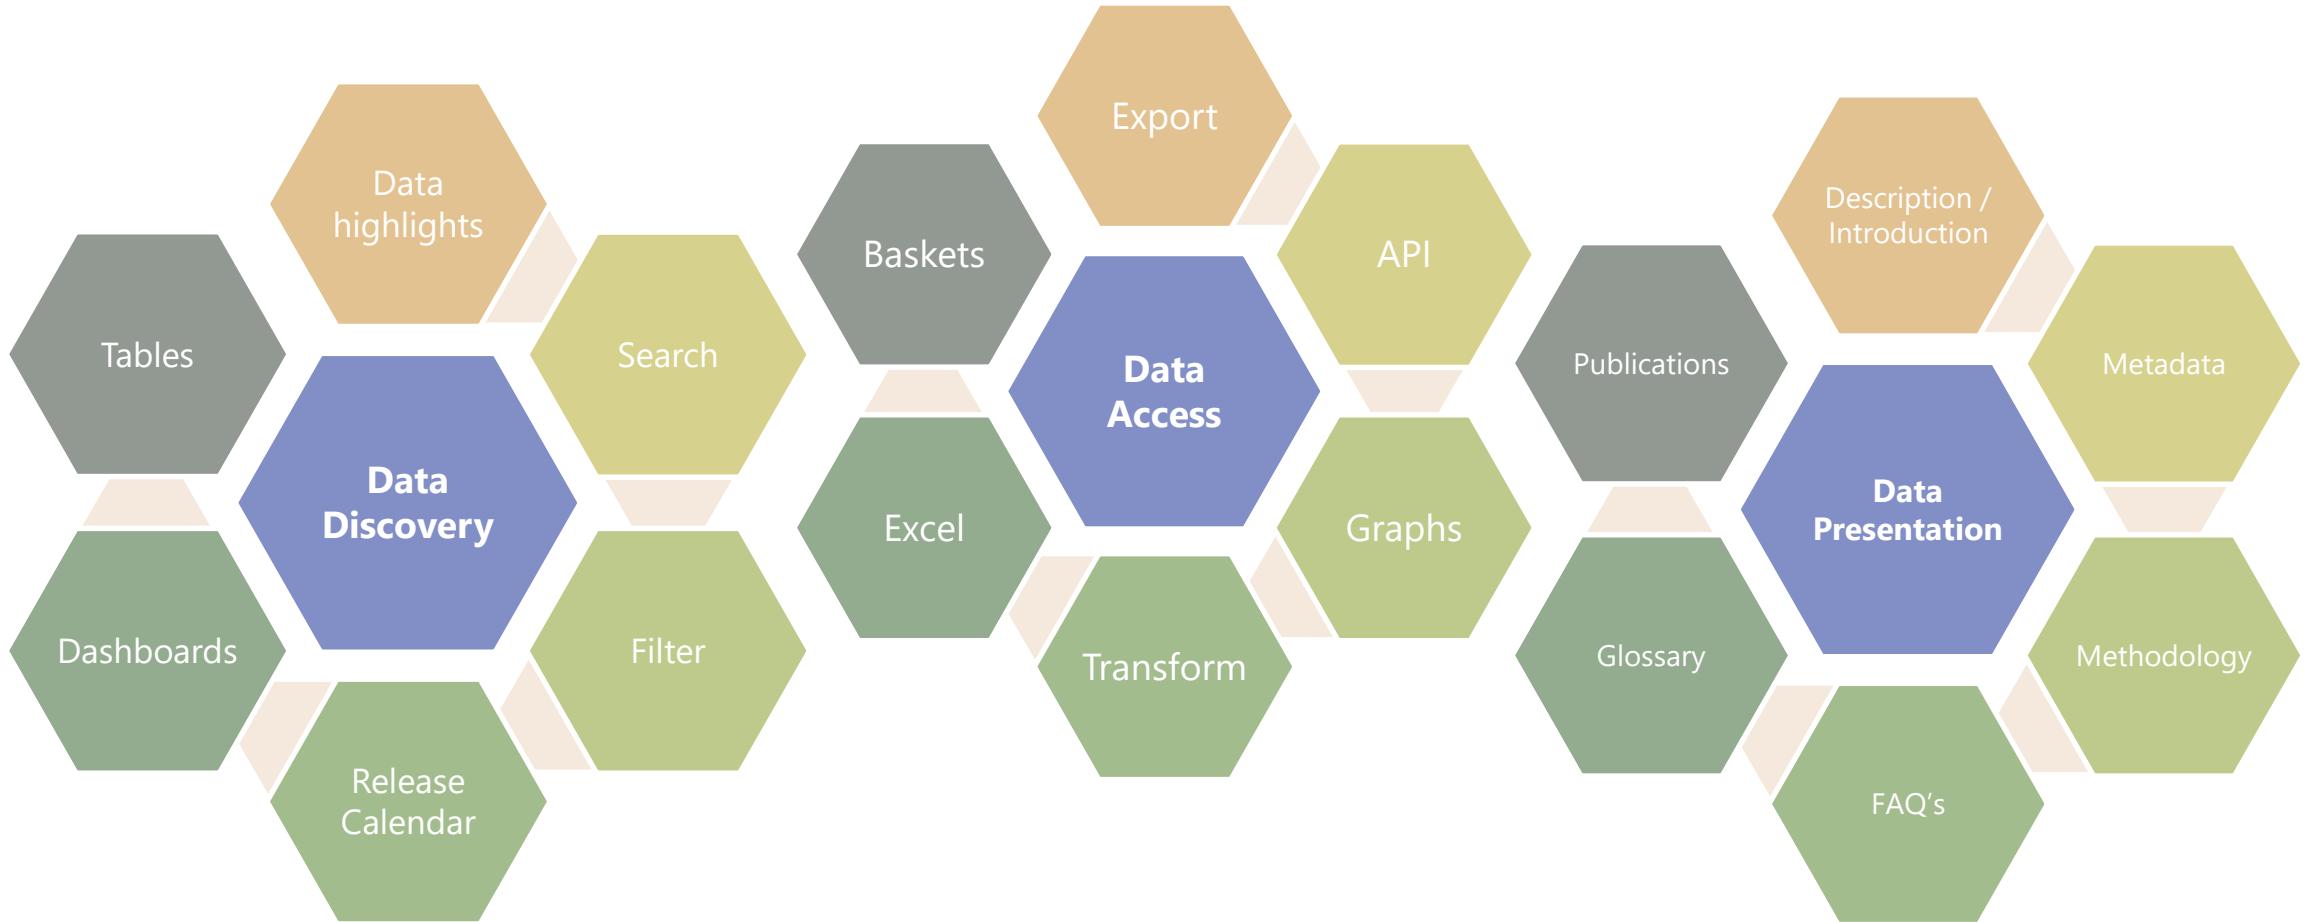

## What do others offer in this space?

- The project team have reviewed and consulted with a number of international institutions
  - OECD / SIS-CC .Stat Suite
  - ECB
  - FRED
  - Eurostat
  - IMF
  - World Bank
  - Central Banks
- Plan to hold information / usability testing sessions with the IO's & CB's once we have an 'Alpha' version ready for review

# Delivery

# How do we break down business requirements into IT tasks?

# SDMX – the Swiss Army knife!

- SDMX is the technical backbone of the Data Portal project
  - Allows the modelling and linking of data and metadata for a statistical domain
  - SDMX registry serves as a central store for all Data Portal functions
- The Data Portal employs a wide range of SDMX artifacts
  - Structural Metadata
    - DSD, dataflow, codelist, etc.
    - Category schemes, hierarchical codelist, mappings, etc
  - Metadata Reports
    - Describing the differing statistical domains, data highlights, etc
- Fusion Metadata Registry (FMR)
  - Benefiting from the investments made in the Fusion / FMR product suite
  - [SDMX/FMR: A reference SDMX Registry implementation \(bis.org\)](http://bis.org)

# Delivering key business requirements

- Statistical Topic pages
  - Entry point to the statistical domain
  - Provide direct access to metadata, methodology, publications, faq's
  - Information is sourced from SDMX metadata reports
- Dashboards
  - Provide users with an at-a-glance view of the statistical domain
    - Highlight key trends in the data
  - Development of a Tableau Web Data Connector for SDMX REST API's
  - Leverage the bank's investment in Tableau

## Delivering key business requirements

- Tabular view on the BIS statistical collections
  - Tables developed by BIS subject matter experts
  - Data Portal introduces a new concept "[Publication Table](#)" to the SDMX registry

*"A Publication Table is a curated table of data, where the values in the table rows, columns and table body cells can be individually specified...enables a single table to pull data from multiple sources and piece the data together in a way which is not possible when dealing with standard cubes of data."*

- [AG-Grid](#) provides a flexible data grid implementation
- *(BIS Statistics Bulletin replaced with the Statistics Explorer product in 2019)*

# Delivering key business requirements

- Time series search / exploration / view
  - Search is powered by Apache Solr
    - “Popular, blazing-fast, open source enterprise search platform”
  - Why Apache Solr?
    - BIS have invested in Cloudera Data Platform
    - Cloudera Search is driven by Solr
  - Sparklines / time series graphics are built using Plotly
- Technology independent data export
  - Export to common formats, CSV, Excel
  - Bulk data downloads
  - SDMX REST API
    - [BIS Stats API](https://stats.bis.org/api-doc/v1/) / <https://stats.bis.org/api-doc/v1/>
    - Code examples will be published on GitHub

## What technology stack will we deploy?

- Containerized application running on OpenShift Container Platform / Kubernetes (K8s)
  - Automated deployments, horizontal scaling, load balancing, orchestration, etc.
- Data Portal Pods
  - Fusion Enterprise Edition / Edge Nodes
  - Apache Solr
  - Python FastAPI
  - React JS
    - (MEDIT React Framework Library)
  - Redis
- Leveraging existing product API's
  - Bis.org
  - Tableau

## What have we learned so far?

- Our goal is to 'reduce complexity & increase clarity' in the user journey
- Agile development practices are key to delivery
  - SCRUM offers opportunities for review & prioritization
  - Clear communication channels
  - Business engagement in the process
  - Focused discussion on requirements
  - Accept we may not know all the answers up-front / need to prototype
- SDMX works for statistical dissemination
- 'Search' is difficult!
  - Search relevancy is a mix of science and art
- Learn from others

## How will we deliver the Data Portal?

- (Phase 1) Current focus is on the public BIS Data Portal offering:
  - Data Flows (26) across the following statistical domains:
    - International banking and financial statistics
    - Macroeconomic statistics
    - Payments and market infrastructures statistics
  - Public domain → ~800k time series published
- (Phase 2) DBSonline replacement (Extranet / Internal offering):
  - User identification / authentication
  - Data visibility dependent on user profile

## When do we go-live?

- The BIS Data Portal will go-live in Q2 2023
- Prior to launch we will pilot the solution
  - Opportunity for the team to gather user feedback on the different application components
  - We would welcome your input!
    - If you are interested in participating in the pilot please reach out to me directly

Thank you

2 Project scope and timeline

3 Main features

4 Next steps

# 1

## Background

# Background: ECB statistics dissemination channels

## Statistical Data Warehouse

~ 1.025.000 users per year from all over the World

### External users

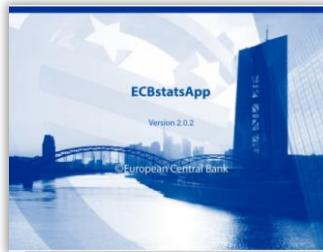

- Launched in **2006**, needs major improvements to meet modern user expectations;
- Used mainly by **professional users**

A screenshot of the Euro Area Statistics website. The header reads "EURO AREA STATISTICS". Below it, a banner features a photo of a woman sitting at a desk with a flag and a gavel, with the text "Don't take it for granted: the value of high-quality data and statistics for the ECB's policymaking". A sidebar on the left lists indicators: Bank interest rates, Banks balance sheet, Competitiveness indicators, and External sector. The main content area shows a grid of data cards.

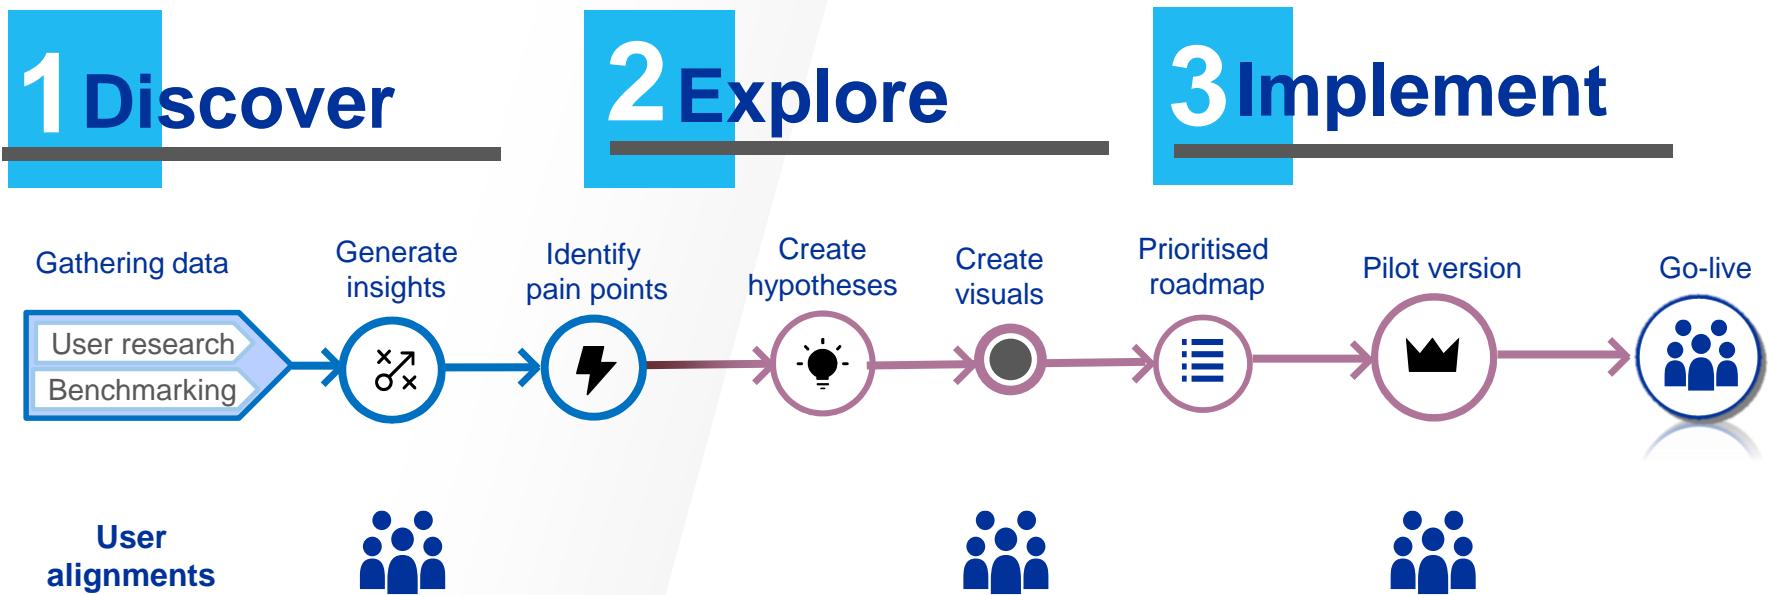

~ 430.000 users per year from all over the World

~ 3.200 downloads

# Background: Project approach and deliverables

# Background: Conceptual study

## User research

Based on in-depth interviews with 44 professional, semi- and non-professionals users pain points were identified and new requirements envisioned

**Non-professional**  
Students, general public

**Semi-professional**  
Journalists, researchers,  
professors, managers

**Professional**  
Economists, analysts

## Benchmark examples

Analysis of 20 data portals' of peer and non-peer organizations to identify best practices

# 2

## Project scope and timeline

# ECB data portal - Project scope

- Develop a new **ECB data portal to the public**, that beyond being an efficient data dissemination channel, ***communicates statistics in an accessible and understandable way for all user groups***. It also unifies the existing ECB statistics channels under a single and user-friendly front-end.

# ECB Data Portal implementation milestones

- ✓ **Release 1** completed by Dec 2021
- ✓ **End-user testing** completed
- ✓ **Release 2:** Technical go-live – start of shadow production

Release 1 – high priority requirements  
Release 2 – medium priority requirements  
Release 3 – low priority requirements

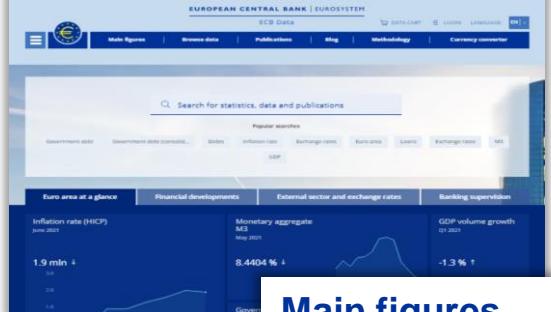

# 3

Main features of the  
new portal

# ECB Data Portal – main features

## Homepage

Search - Dashboard - Portal news -  
Release calendar - Popular topics

## Main figures

## Euro area & country comparisons— Dashboards - methodology

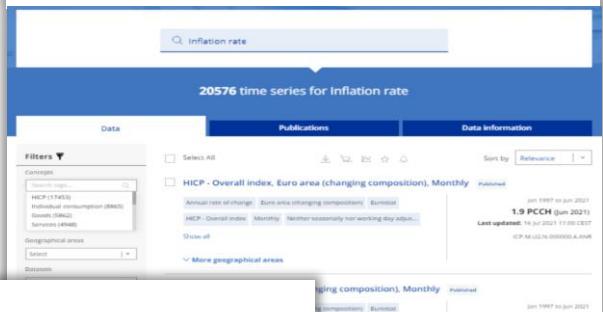

## Time series & comparison

## Chart & table view – style chart – transform data – custom charts

- Economic indicators
  - What it used to look like
  - Interactive indicators
- Next steps

VI-4 Markaðsverð húsnæðis

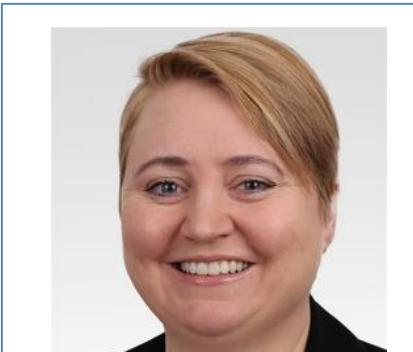

IV-1 Atvinnuleysi

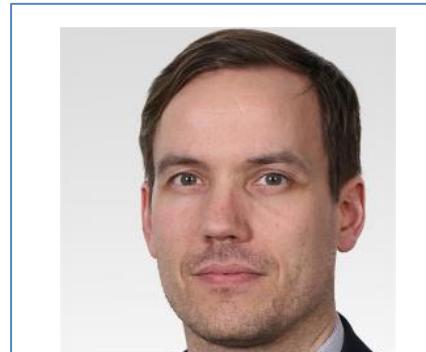

# The Project

1. Strategy for publication of data to web
2. Definition of the data to be published in the central bank's new website
3. Development of visualization of data on the web
4. Prepare a fully ready new data-web, data-pages or dashboards for publication on a new website
5. Advise the new website project team on data to be published to the new website

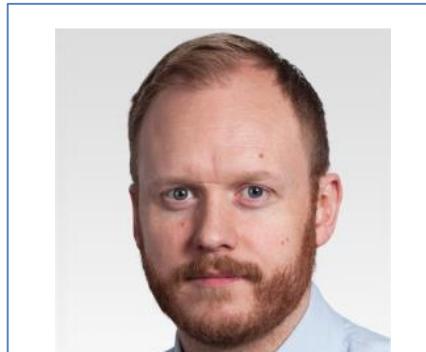

# The Team

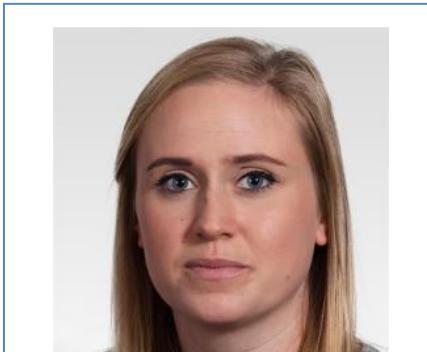

Anna Sif

Bjarni Þór

Guðjón Emil

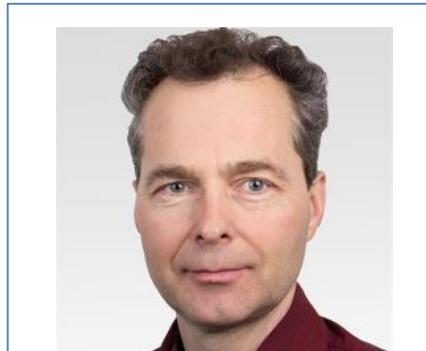

Guðríður Lilla

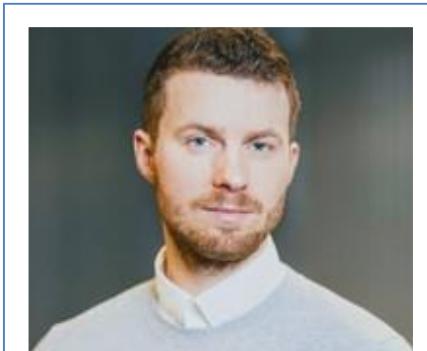

Helga

Jón

Magnús

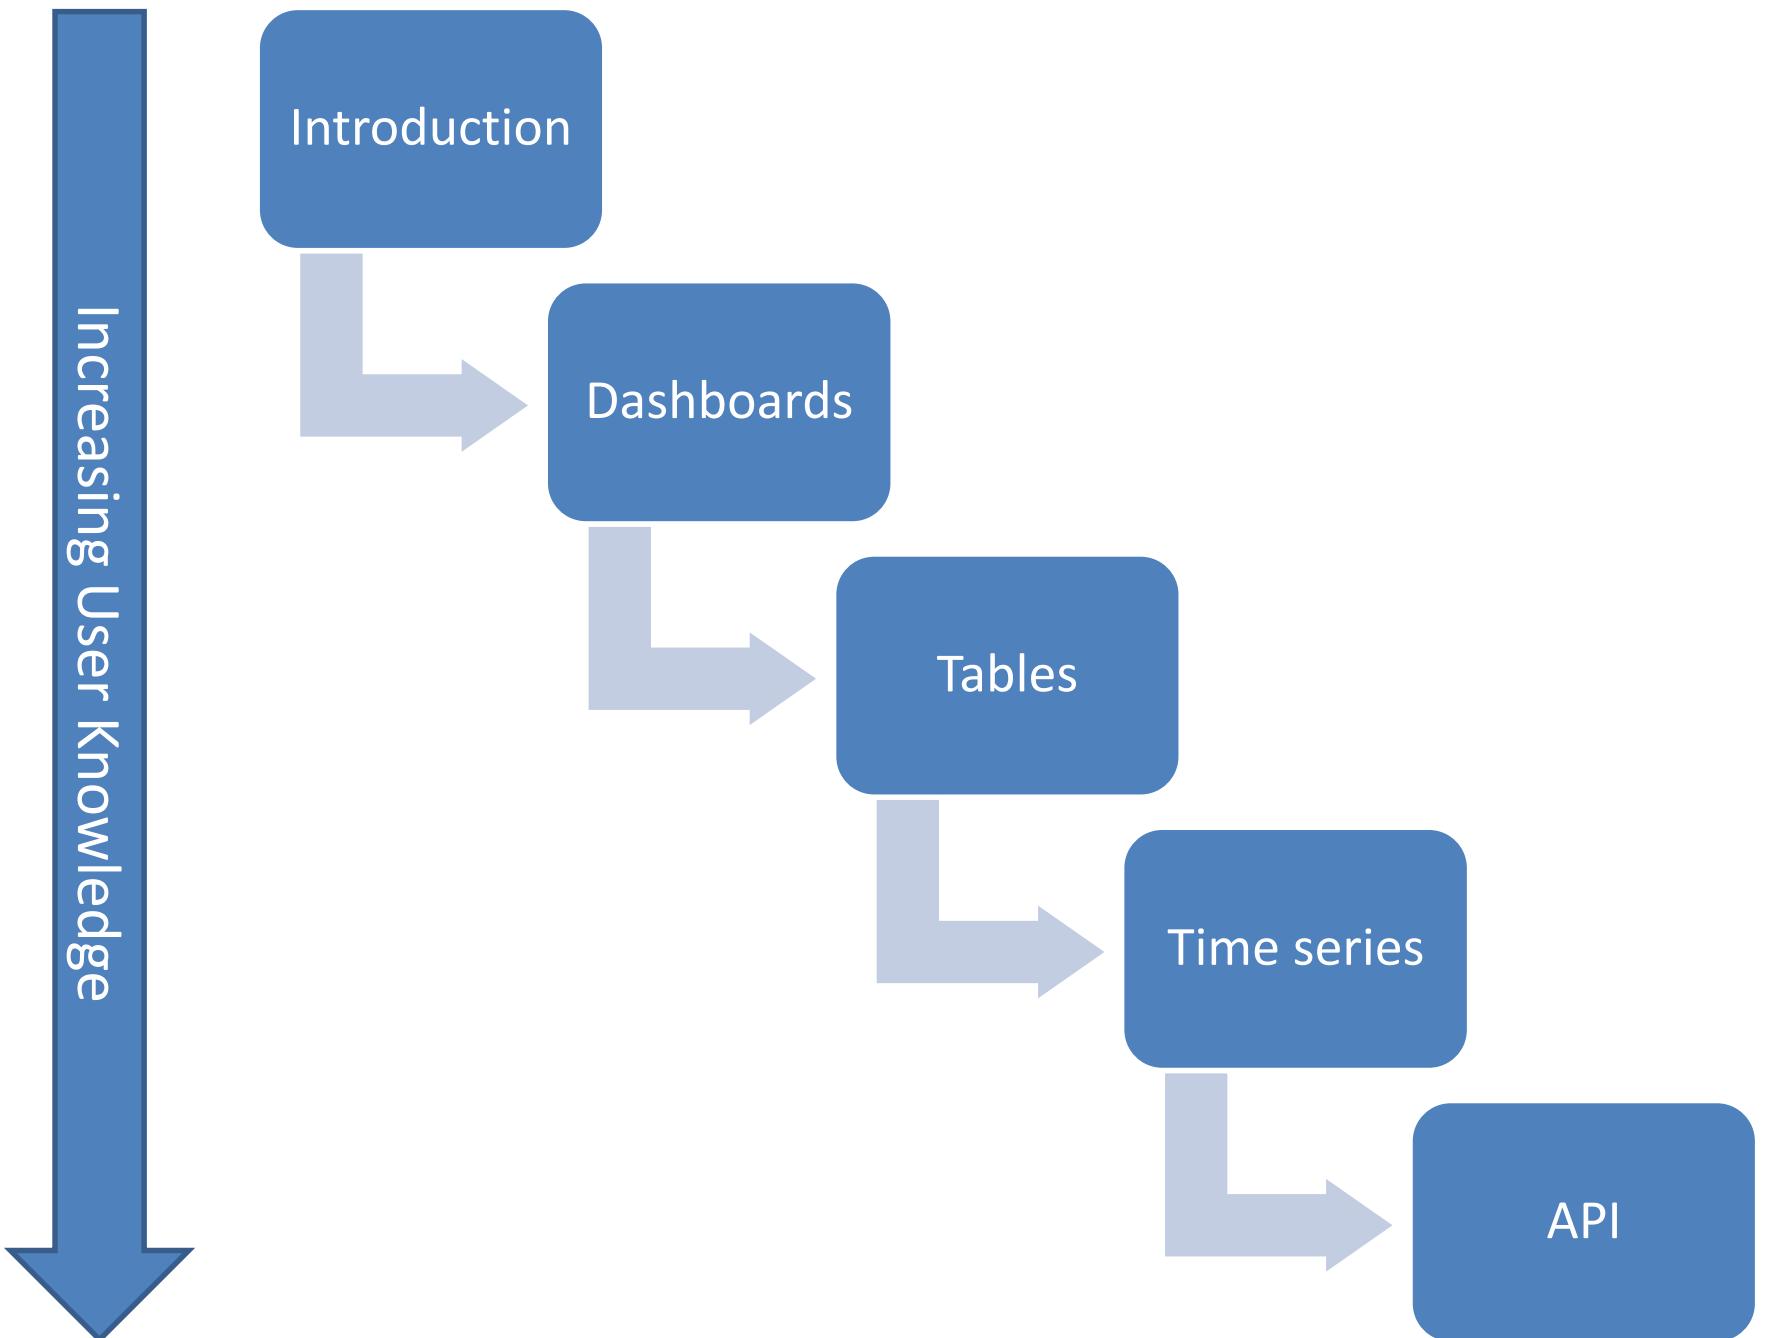

Daníel Hjörvar  
(Metadata ehf)

- Cross functional team
- Experience
  - Publication of economic indicators
  - Data analysis
  - Agile project management
  - Business intelligence
  - DevOps

# The Strategy

- User Interviews
- Mockups
  - Data web
  - Dashboards
  - Data Browser
  - API
- Proof of concept
  - Economic Indicators
  - Interest and inflation
- Technology

# Economic Indicators

- What is an economic indicator?
  - Key indicators showing the trends in the Icelandic economic system
  - 10 categories
  - 230 distinct graphs
  - Information gathered from many different sources
    - Central bank of Iceland, Statistics Iceland, Registry Iceland, Nasdaq Iceland, Sementsverkssmiðjan hf. (Cement company) and more
- In simple terms:
  - Very interesting data showing the developments for inflation, real estate prices, employment, national depts and more

# Economic Indicators

- Published in printed form since 2002
- Published on web in Excel format and in PDF

The screenshot shows the header of the website. It features the bank's logo on the left, followed by a dark blue navigation bar with white text. The navigation bar includes links for "About the Bank", "Icelandic", a search bar with a magnifying glass icon, and categories like "Monetary Policy", "Financial Stability", "Financial Supervision", "Statistics", and "Publications". Below the navigation bar, a breadcrumb trail shows the path: "Front page > Publications > Publications > Publication".

# Interactive Economic Indicators

## HAGVÍSAR

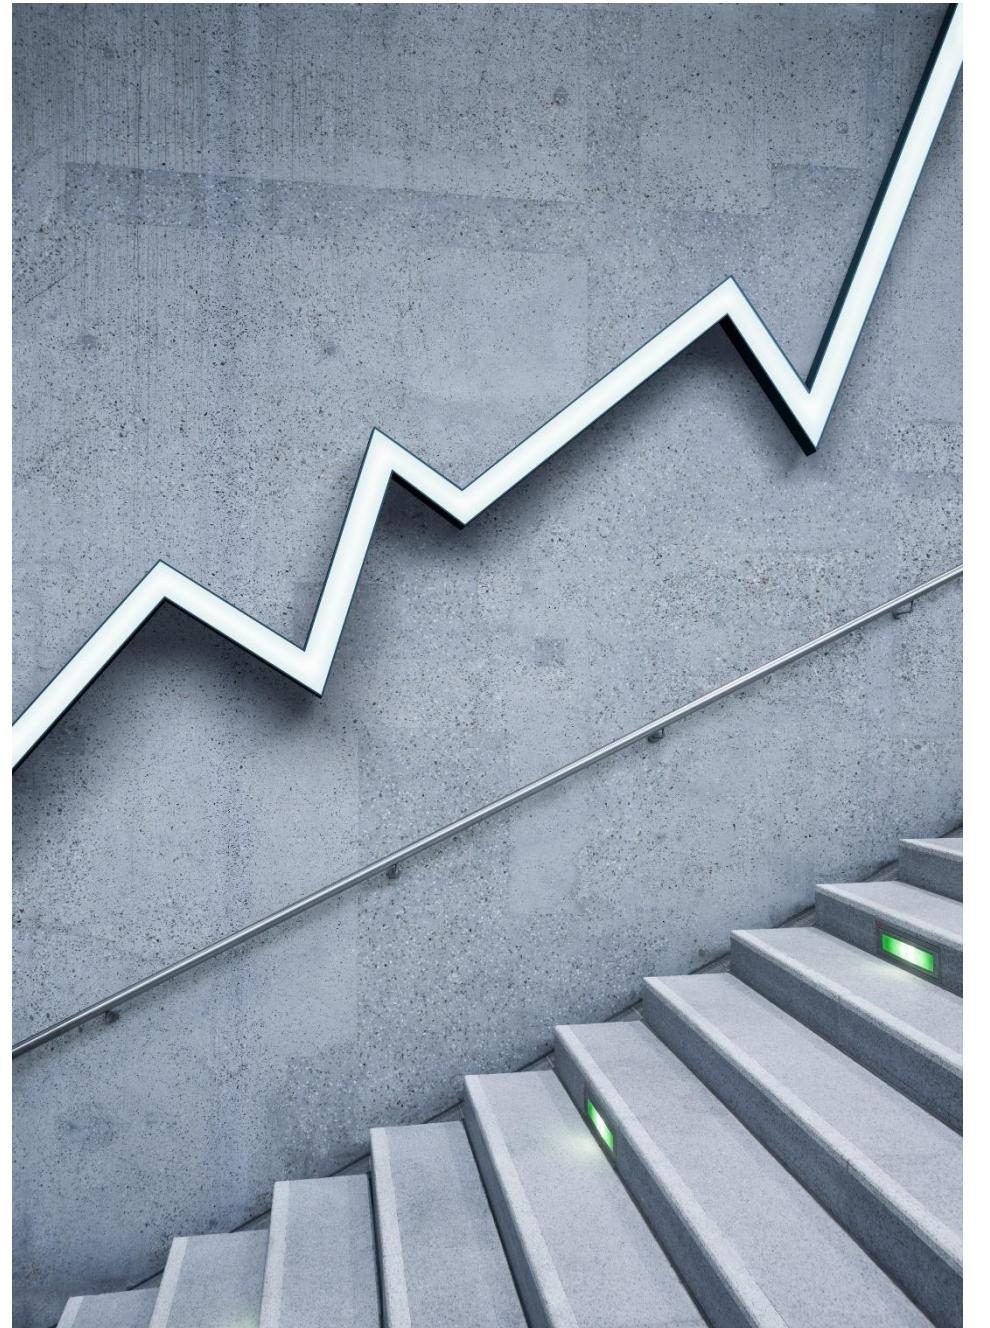

- I Verðlagsþróun og verðbólguvæntingar
- II Framleiðsla og eftirspurn
- III Utanríkisviðskipti og ytri skilyrði
- IV Vinnumarkaður og tekjur
- V Opinber fjármál
- VI Eignamarkaður
- VII Heimili og fyrirtæki
- VIII Fjármálamarkaðir
- IX Alþjóðleg efnahagsmál og erlendur samanburður
- X Fjármálakerfið

# Expectation management

## Next steps

- Still working automating the updates of the data.
  - Part is automatically updated
  - Part is consolidated into Excel sheets
- Next version in progress
  - Embed the indicators into the new website
  - Increase automation and decrease manual updates
  - Improvements and fixes if necessary
  - Create an English version ;)
- Unlocking the next level
  - Make data available directly (API/Web service)
  - Create content from the data – data stories

# Questions?

IFC-Banco de Portugal Conference: "Communication on central bank statistics: unlocking the next level"

19-20 September 2022

## Flexible dissemination software for the 2021 England and Wales Census<sup>1</sup>

Mike Thompson,  
The Sensible Code Company

---

<sup>1</sup> This contribution was prepared for the workshop. The views expressed are those of the authors and do not necessarily reflect the views of the Banco de Portugal, the BIS, the IFC or the other central banks and institutions represented at the event.

# Flexible dissemination software for the 2021 England & Wales Census

20th September 2022

The Sensible  
Code Company

# The Sensible Code Company

We make software products that modernise  
the processing and publication of data.

# Summary

The development, over the last five years, of a **flexible dissemination service** to support the publication of results from the 2021 England and Wales census, in partnership with the Office for National Statistics.

# Contents

- Background
- Technical challenges & solutions
- Opportunities for innovation
- What's next?
- Questions

# Background

# What is flexible dissemination?

Giving users the capability to create their own custom outputs directly from microdata.

2011

- 1000s of static tables
- Limited customisation of tables
- Manual review of every table released
- 4-5 years to release all outputs

2011

- 1000s of static tables
- Limited customisation of tables
- Manual review of every table released
- 4-5 years to release all outputs

2021

- Hundreds of millions of possible tables
- Build your own table from scratch
- Automated table checks
- 18-24 months to release all outputs

# Benefits

- **Publish more data:** flexible dissemination means the range of possible outputs is huge and users can self-serve
- **Publish more quickly:** automation of statistical disclosure control checks means time taken to release everything will be compressed
- **Improve reliability and reproducibility:** More automation reduces opportunities for human error to creep in

# Technical challenges & solutions

# Challenge #1

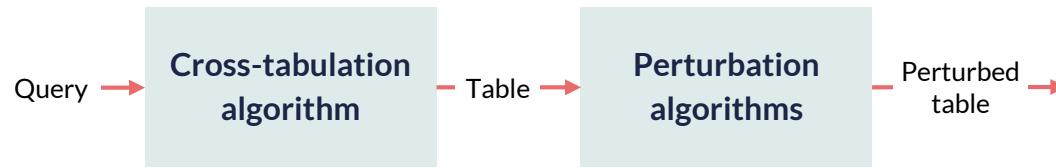

Automating tabulation and perturbation  
in real-time

# Need

Build cross-tabulations from confidential microdata and apply perturbation algorithms in real-time, in response to a user's query.

# Concept

# Technical approach

- **Data changes infrequently:** forgo complicated database software and implement our own algorithms and data structures, keeping things simpler and more easily scalable
- **Data is small:** 10GB of CSV can be stored in 1GB of RAM and scanned in place, eliminating slow operations like disk or network access

# Perturbation approach

- **Cell-key perturbation of frequency counts**
- **Independent perturbation of zeros in frequency counts**
- **Preservation of structural zeros**

**Note:** Source data will already have been row-swapped.

For more, see "[The methodological challenges of protecting outputs from a Flexible Dissemination System](#)" by Stephanie Blanchard.

# Results

- Query for Age by Sex by Output Area (low level geography)
  - 60 million rows of input data
  - 3 million cells of output data
  - **Takes ~0.5 seconds**
- Outputs validated independently for correctness

## Challenge #2

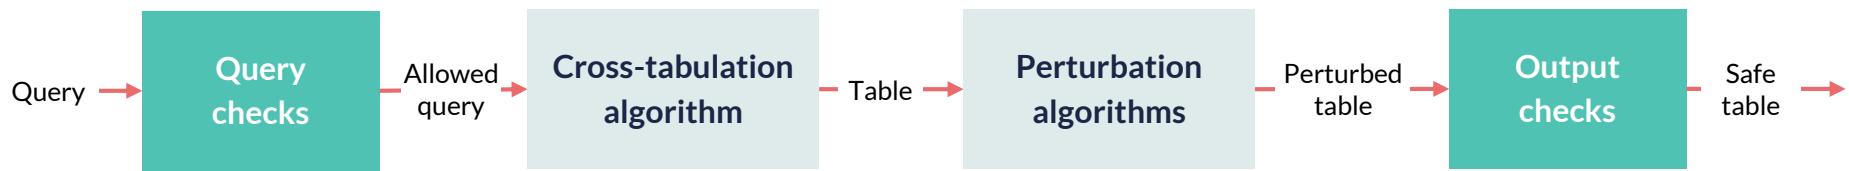

Giving ONS control of automated disclosure checks

# Need

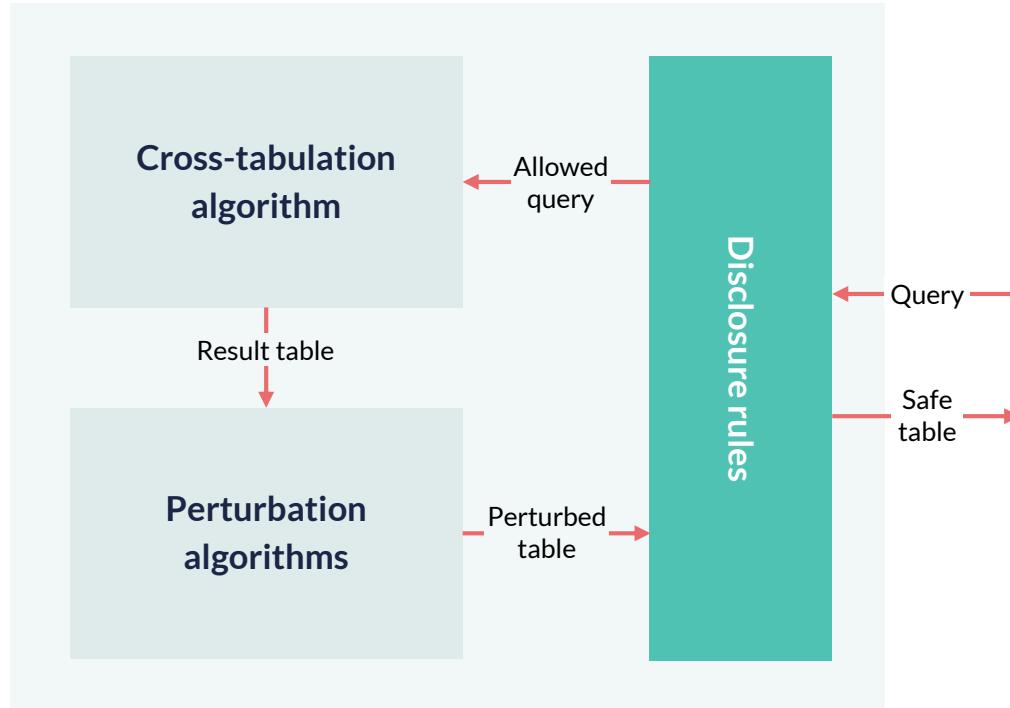

Create the capability to allow disclosure checks to be specified and automated, and for new checks to be created without requiring software changes.

# How it works

# How it works: single software component

# NTTS 2021 conference paper

## A Disclosure Rules Language for Deciding Publishability of Frequency Tables

### 2. RATIONALE

Whilst it is possible to use existing computer languages to specify the disclosure control rules, using such an approach would have the following disadvantages:

- The core software code and data would need protecting from user authored rules code in order to maintain resilience in the face of bugs. This incurs significant communication and performance penalties.
- Using close coupling for performance reasons creates difficulties with version management between user code and core software code (e.g. changes in data representation).
- A general purpose language has more scope for unintended behaviour and side effects, e.g. by unintentionally adding global state.
- Programs in general purpose languages are typically not amenable to parallel execution unless great care is taken and authors are knowledgeable in appropriate techniques.
- General purpose languages are typically large in scope and thus present more of a learning challenge for a program author.
- User authored code in a general purpose language would typically have more diverse ways of specifying a given rule and thus present more of a challenge for a reader.

# Illustrative disclosure checks

- **Set maximum variables:** block queries that will lead to overly sparse outputs before they are run
- **Attribute disclosure:** individual or group attribute disclosure in a table can be detected and suppressed
- **Identity disclosure:** tables containing too many values of one can also be blocked

# Results

- **It worked!** ONS tested and confirmed results and ability to write their own rules
- **Facilitated use cases beyond initial design:** ONS using rules to gradually open access to more data
- **Rules can be kept secret** from software developers!

# Challenge #3

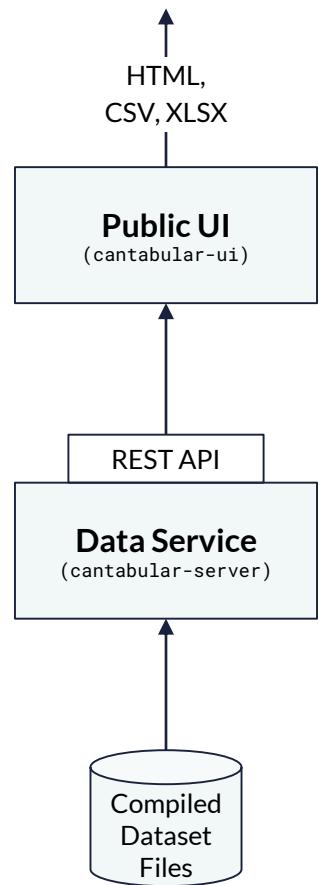

## Helping users build their own tables

# Need

Explore how to design a user interface that helps users build their own table from a microdata-based dataset.

# How it works

# Approach

- Developed alternative prototypes which ONS tested with their users and used in consultations
- Implemented separate user interface service and continued to develop it as a product independent of ONS
- Now supporting ONS to develop their own user interface, using similar design patterns, built on top of our software

[← Back](#)

## Choose your variables

 econ[All](#)

2 matching results found

[Clear search](#)

### [Economic activity](#)

3 classifications available

### [National statistics socio-economic classification](#)

3 classifications available

### Your selected variables

Age of individual (8 categories)

[Change](#)[Remove](#)

Ethnic group

[Change](#)[Remove](#)[Save and continue](#)

### Your table

#### Data confidentiality

347 out of 348 areas pass  
confidentiality checks.  
[See missing areas](#)**Cell count:** 52,896**Population:** Usual Residents: England and Wales**Geographic level:** Local Authority**Geographic area:** Whole population**Variables:** Age of individual (8 categories),  
Ethnic group**Filters:** None selected

Demo

# Challenge #4

Flexible data needs  
flexible metadata

# Need

Develop a capability to allow reference metadata to be associated with flexibly created outputs.

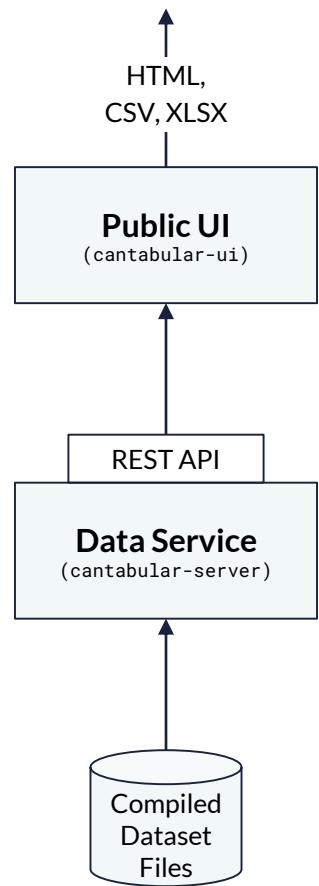

# Constraints

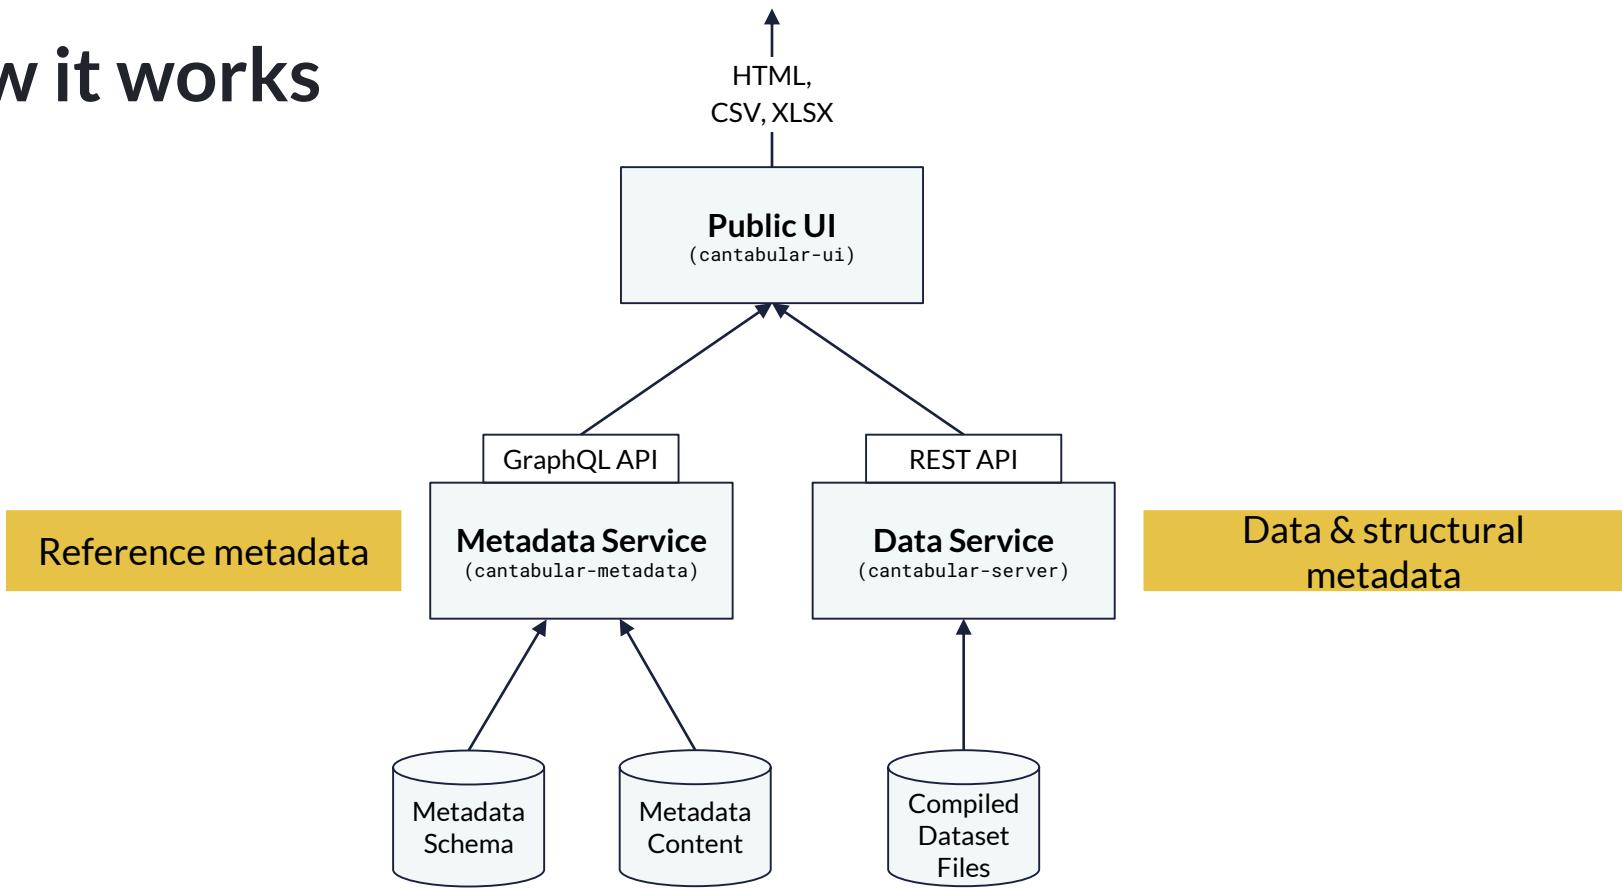

- **Metadata schema still in development:** at the time of its creation, the ONS metadata model was still being designed
- **Vocabulary/standard agnostic:** different organisations adopt different approaches so we needed a flexible solution

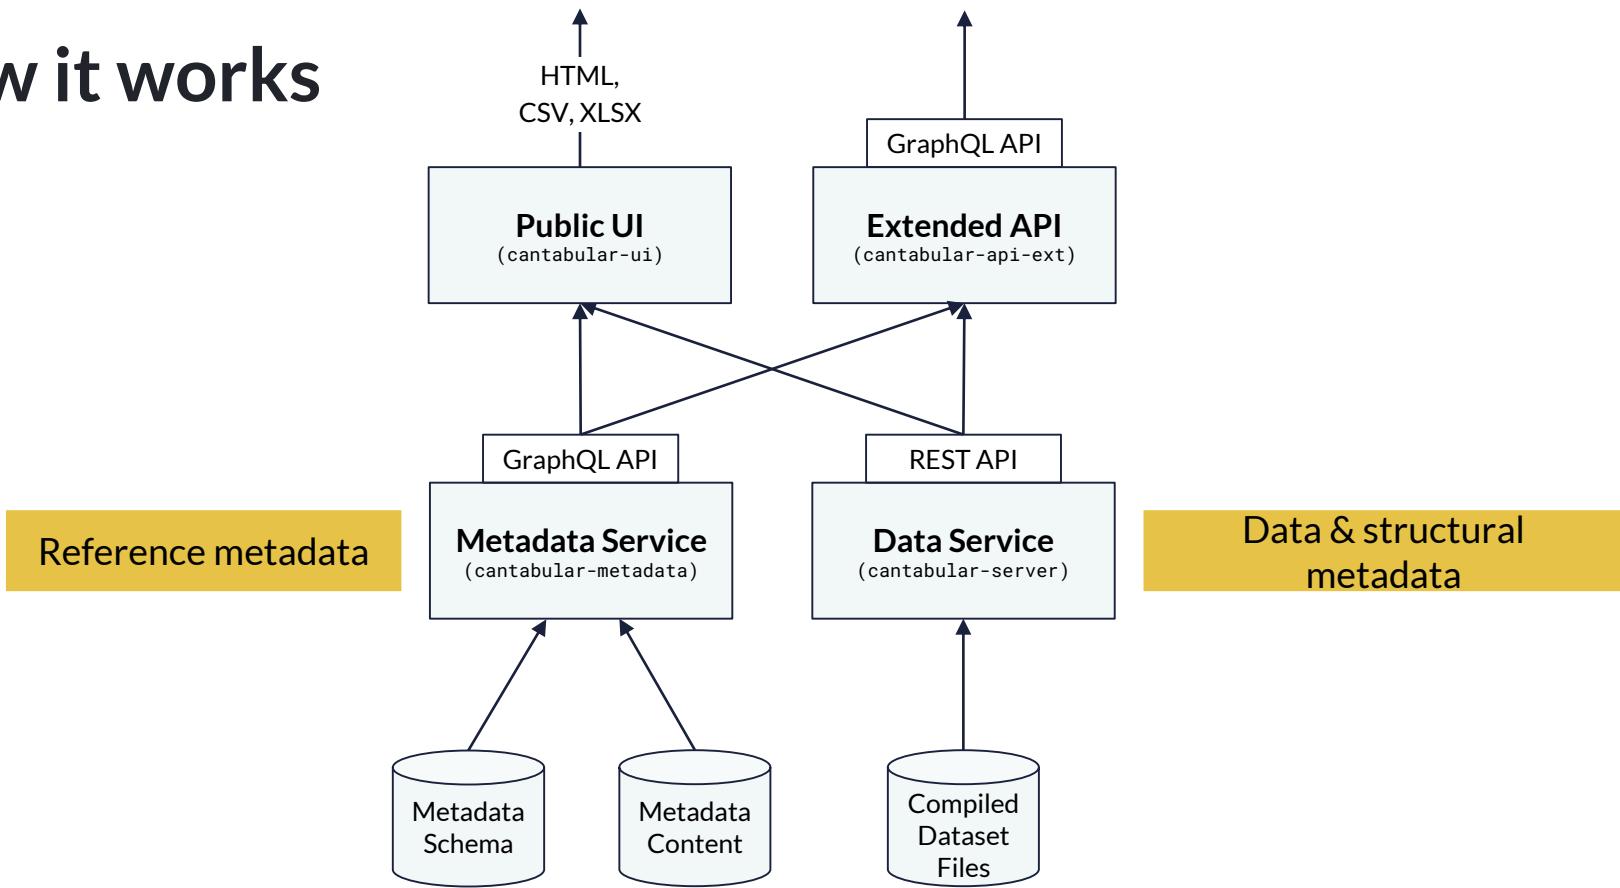

# How it works

# How it works

# How it works

# Technical approach

- **User-defined schema:** allow specification of arbitrary custom metadata using a user-defined schema parsed when the software is run
- **Single source of data & metadata:** combine data, structural metadata and reference metadata into one integrated API
- **Support multiple languages:** Census outputs need to be in English and Welsh; use metadata service to translate all metadata

Demo

# Opportunities for innovative products

# ONS census dissemination

- Being used by ONS to power a range of different census products:
  - Dataset search and discovery
  - Custom table user interface
  - Geographic area profiles
  - Data visualisations
  - Data dictionary

Home > Census > Population Group Profiles

# Population Group Profiles

Select one or more identity characteristics to define a population group to compare with the whole population of England and Wales. For example, see [people of Sikh ethnicity born in the UK](#) or [people aged 65+ born in Ireland](#).

Select another characteristic ▾

Religion: Muslim (X)

English proficiency: Speaks no English (X)

## Demographics

### Population

<1%

of people in England and Wales

77,672 of 55,938,886 people

### Population by area

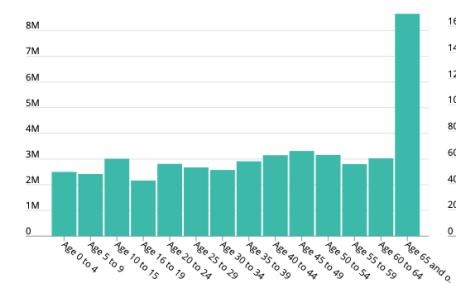

Single Grid

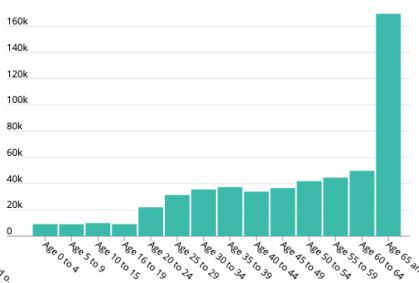

Split by Ethnic group

Group by Age of individual (14 categories)

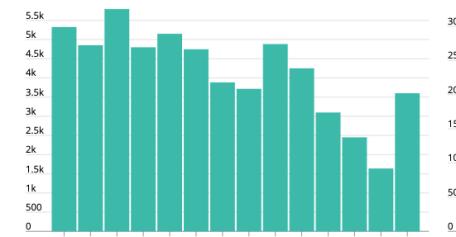

White: English/Welsh/Scottish/Northern Irish/British

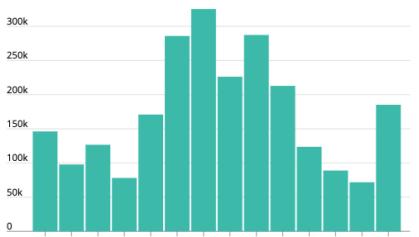

White: Irish

White: Gypsy or Irish Traveller

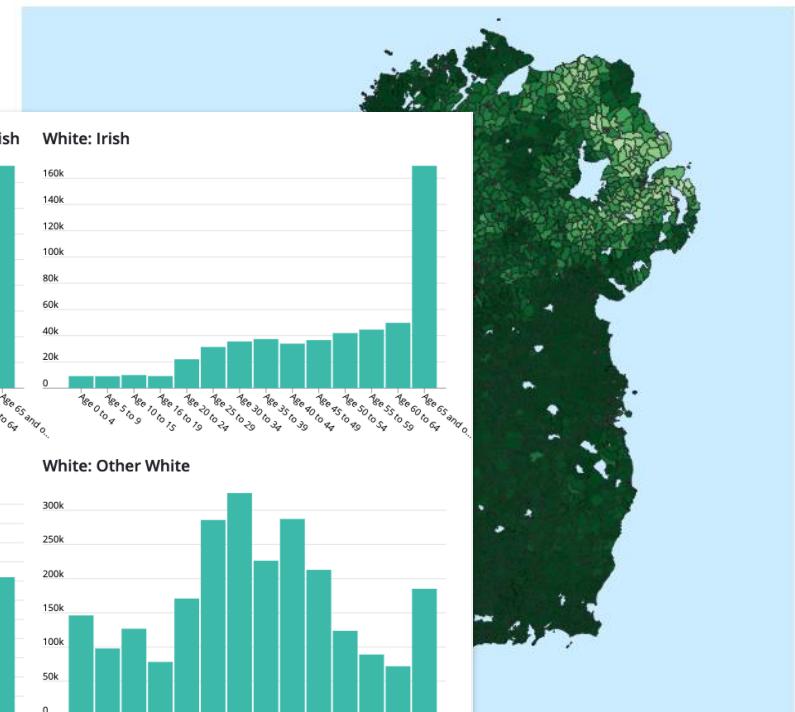

White: Other White

Select geography District Electoral Division

Select variable Religion (naive imputation)

Select category Roman Catholic

Demo

# What's next?

# What's next?

- **Supporting flow data:** allowing cross-tabulation of migration and commuting patterns data, which are often very large tables
- **Supporting magnitude data:** extending disclosure control approaches to magnitude data (with NSI support on methodology)
- **Adding visualisation tools:** allowing some exploratory visualisation and mapping in the user interface

# Thanks!
