

Project NGFS Data Directory 2.0

**Network for greening
the financial system**

The NGFS Data Directory 2.0 is being developed to make climate-related financial data more accessible and user-friendly, enabling informed decisions in the fight against climate change.

Motivation

User friendly and collaborative

Key features

More detailed searches for existing functionalities

Broadened search capabilities with expanded browsing functionalities

Possible to add new climate-related metrics, raw data items and sources

Approach

Collect requirements

Run design thinking workshops with key stakeholders and users to collect requirements for the new Data Directory version.

Build a wireframe

Develop a wireframe to capture the identified features of the new version of the Data Directory.

Create the product

Work with select (industry) partners to create the new version of the Data Directory.
