Liquidity coverage ratio disclosure standards

Introduction

1. The fundamental role of banks in financial intermediation makes them inherently vulnerable to liquidity risk, of both an institution-specific and market nature. Financial market developments have increased the complexity of liquidity risk and its management. During the early “liquidity phase” of the financial crisis that began in 2007, many banks - despite adequate capital levels - still experienced difficulties because they did not manage their liquidity in a prudent manner. The difficulties experienced by some banks, which, in some cases, created significant contagion effects to the broader financial system, were due to lapses in basic principles of liquidity risk measurement and management.

2. In response, the Basel Committee in 2008 published Principles for Sound Liquidity Risk Management and Supervision ("Sound Principles"), which provides detailed guidance on the risk management and supervision of funding liquidity risk. To complement these principles, the Committee further strengthened its liquidity framework by publishing Basel III: International framework for liquidity risk measurement, standards and monitoring, which develops a set of liquidity risk monitoring tools and two minimum standards for funding liquidity: the Liquidity Coverage Ratio (LCR) and the Net Stable Funding Ratio (NSFR). These standards are an essential component of the set of reforms introduced by Basel III and together will increase banks' resilience to liquidity shocks, promote a more stable funding profile and enhance overall liquidity risk management.

3. This disclosure framework is focussed on disclosure requirements for the LCR. These requirements will improve the transparency of regulatory liquidity requirements, reinforce the Sound Principles, enhance market discipline, and educate market participants as the LCR is implemented. Disclosure requirements for the NSFR will be determined after the standard is finalised.

4. As noted in Basel III: The Liquidity Coverage Ratio and liquidity risk monitoring tools, the objective of the LCR is to promote the short-term resilience of the liquidity risk profile of banks. It does this by ensuring that banks have an adequate stock of unencumbered high-quality liquid assets (HQLA) that can be converted easily and immediately in private markets into cash to meet their liquidity needs for a 30 calendar day liquidity stress scenario.

5. The LCR will be introduced on 1 January 2015, with a minimum requirement set at 60%. The minimum requirement will rise in equal annual steps to reach 100% on 1 January 2019. Furthermore, individual countries that are receiving financial support for macroeconomic and structural reform purposes may choose a different implementation schedule (including for these disclosure requirements) for their national banking systems, consistent with the design of their broader economic restructuring programme.

6. The Committee is of the view that usability of the accumulated stock of HQLA is important. Therefore, during periods of stress, it would be entirely appropriate for banks to use their stock of HQLA, thereby falling below the minimum requirement, as maintaining the LCR at 100% under such circumstances could produce undue negative effects on the bank and other market participants. Supervisors will subsequently assess this situation and adjust their response flexibly.

---

1 See http://www.bis.org/publ/bcbs144.pdf.
2 See http://www.bis.org/publ/bcbs238.pdf.
7. Public disclosure improves transparency, reduces uncertainty in the markets and strengthens market discipline. It is important that banks adopt a common disclosure framework to help market participants consistently assess the liquidity risk position of banks. To promote consistency and ease of use of disclosures related to the LCR and enhance market discipline, the Basel Committee has agreed that internationally active banks across Basel member jurisdictions will be required to publish their LCR according to a common template. There are, however, some challenges associated with disclosure of liquidity positions under certain circumstances, including the potential for undesirable dynamics during stress. The Basel Committee has considered this trade-off in formulating the disclosure framework contained in this document.

8. The disclosure requirements are organised as follows. Section 1 presents requirements on the scope of application, implementation date, and the frequency and location of reporting. The disclosure requirements for the LCR are set out in Section 2 and include a common template that banks must use to report their LCR results and select details of the LCR components.

9. The Basel Committee recognises that the LCR is only one measure of a bank's liquidity risk position and that other information, both quantitative and qualitative, is essential for market participants to gain a broader picture of a bank's liquidity risk position and management. Section 3 of this disclosure framework provides additional guidance on other information that banks may choose to disclose in order to facilitate understanding and awareness of their internal liquidity risk measurement and management.

Section 1: Scope of application, implementation date and frequency of reporting

10. The disclosure requirements set out in this document should be applied to all internationally active banks on a consolidated basis. National supervisors may apply these disclosure requirements to other banks and to any subset of entities of internationally active banks to ensure greater consistency and a level playing field between domestic and cross-border banks.

11. National authorities will give effect to the liquidity disclosure requirements set out in this standard by no later than 1 January 2015. Banks will be required to comply with these disclosure requirements from the date of publication of their first set of financial statements relating to balance sheet data on or after 1 January 2015. Banks must publish this disclosure with the same frequency as, and concurrently with, the publication of their financial statements, irrespective of whether the financial statements are audited (ie typically quarterly or semi-annually).

12. Disclosures required by this document must either be included in banks’ published financial reports or, at a minimum, these reports must provide a direct and prominent link to the completed disclosure on their websites or publicly available regulatory reports. Banks must also make available on their websites, or through publicly available regulatory reports, an archive (for a suitable retention period determined by the relevant national authority) of all templates relating to prior reporting periods. Irrespective of the location of the disclosure, the minimum disclosure requirements must be in the format required by this document (ie those required by Section 2).

Section 2: Disclosure requirements

13. The disclosure of quantitative information about the LCR should, at a minimum, follow the common template that the Basel Committee has developed. Annex 1 presents an explanation of the
common template’s design.\(^3\) The LCR information must be calculated on a consolidated basis and presented in a single currency.

14. Data must be presented as simple averages of daily observations over the previous quarter (i.e., the average is calculated over a period of, typically, 90 days).\(^4\)

15. Both unweighted and weighted values of the LCR components must be disclosed. The unweighted value of HQLA is to be calculated at market value. The unweighted value of inflows and outflows is to be calculated as the outstanding balances of various categories or types of liabilities, off-balance sheet items, or contractual receivables. The “weighted” value of HQLA is to be calculated as the value after the haircuts are applied. The “weighted” value for inflows and outflows is to be calculated as the value after the inflow and outflow rates are applied. Total HQLA and total net cash outflows must be disclosed as the adjusted value, where the “adjusted” value of HQLA is the value of total HQLA after the application of both haircuts and any applicable caps on Level 2B and Level 2 assets. The adjusted value of net cash outflows is to be calculated after the cap on inflows is applied, if applicable. See Annex 2 for more details.

16. Banks must also provide links to the relevant supervisors’ rules or guidance on national implementation of the LCR. In addition to the common template, banks should provide sufficient qualitative discussion around the LCR to facilitate a greater understanding of the results and data provided. For example, where significant to the LCR, banks could discuss:

(a) the main drivers of their LCR results and the evolution of the contribution of inputs to the LCR’s calculation over time;

(b) intra-period changes as well as changes over time;

(c) the composition of HQLA;

(d) concentration of funding sources;

(e) derivatives exposures and potential collateral calls;

(f) currency mismatch in the LCR;

(g) a description of the degree of centralisation of liquidity management and interaction between the group’s units; and

(h) other inflows and outflows in the LCR calculation that are not captured in the LCR common template but which the institution considers to be relevant for its liquidity profile.

---

\(^3\) This template is largely based on the template used to collect the Basel III implementation monitoring data: see http://www.bis.org/bcbs/qis/index.htm.

\(^4\) Banks reporting on a less frequent basis (e.g., semi-annually) are still required to disclose the LCR calculated as an average of daily values over the most recent three months in the reporting period.

### HIGH-QUALITY LIQUID ASSETS

1. **Total high-quality liquid assets**

### CASH OUTFLOWS

2. Retail deposits and deposits from small business customers, of which
   - 2.1 Stable deposits
   - 2.2 Less stable deposits
   - 2.3 Unsecured wholesale funding, of which
     - 2.3.1 Operational deposits (all counterparties) and deposits in institutional networks of cooperative banks
     - 2.3.2 Non-operational deposits (all counterparties)
     - 2.3.3 Unsecured debt
   - 2.4 Secured wholesale funding
   - 2.5 Additional requirements, of which
     - 2.5.1 Outflows related to derivatives exposures and other collateral requirements
     - 2.5.2 Outflows related to loss of funding on debt products
     - 2.5.3 Credit and liquidity facilities
     - 2.5.4 Other contractual funding obligations
     - 2.5.5 Other contingent funding obligations
   - 2.6 TOTAL CASH OUTFLOWS

### CASH INFLOWS

17. Secured lending (eg reverse repos)
18. Inflows from fully performing exposures
19. Other cash inflows
20. TOTAL CASH INFLOWS

21. **TOTAL HQLA**
22. **TOTAL NET CASH OUTFLOWS**
23. **LIQUIDITY COVERAGE RATIO (%)**

---

\(^a\) Unweighted values must be calculated at market value (for HQLA) or as outstanding balances maturing or callable within 30 days (for inflows and outflows).

\(^b\) Weighted values must be calculated after the application of haircuts (for HQLA) or inflow and outflows rates (for inflows and outflows).

\(^c\) Adjusted values must be calculated after the application of both (i) haircuts and inflow and outflow rates and (ii) any applicable caps (ie cap on Level 2B and Level 2 assets for HQLA, and cap on inflows).
Section 3: Guidance on additional disclosures

17. The Basel Committee recognises that the LCR is only one measure of a bank’s liquidity risk position. Disclosure of other quantitative and qualitative information will provide market participants with a broader picture of banks’ liquidity risk position and management and will promote market discipline. The Sound Principles provides additional guidance to banks on prudent liquidity risk management, including principles on disclosure of certain key information. Using the Sound Principles as a basis for providing greater qualitative information on a bank’s approach to liquidity risk management will further enhance the quality and consistency of liquidity disclosures. It will also allow banks to present information relevant to their business model that may not be adequately captured by standardised regulatory metrics. Additional information that banks choose to disclose should provide sufficient information to enable market participants to understand and analyse any figures provided.

18. As there is no single metric that can comprehensively quantify liquidity risk, a bank may also choose to disclose additional quantitative information related to its internal liquidity risk measurement and management framework. In particular, the Basel III liquidity risk framework outlines several key monitoring tools for assessing liquidity risk. These metrics are not regulatory requirements under the Basel III framework, but may be used as consistently defined monitoring tools. They are intended to capture specific information related to a bank’s cash flows, balance sheet structure, and available collateral.

19. The additional quantitative information that banks may consider disclosing could include customised measurement tools or metrics that assess the structure of the bank’s balance sheet, as well as metrics that project cash flows and future liquidity positions, taking into account off-balance sheet risks, which are specific to that bank. Other quantitative information could include key metrics that management monitors, including, but not limited to:

(a) concentration limits on collateral pools and sources of funding (both products and counterparties);
(b) liquidity exposures and funding needs at the level of individual legal entities, foreign branches and subsidiaries, taking into account legal, regulatory and operational limitations on the transferability of liquidity; and
(c) balance sheet and off-balance sheet items broken down into maturity buckets and the resultant liquidity gaps.

20. As noted in Section 2, banks are required to provide a qualitative discussion of their LCR results and the related components that are required to be disclosed. Banks may also choose to provide other qualitative information to enable market participants to gain a more thorough understanding of internal liquidity risk management and positions, particularly those related to their specific institution. This information could include:

(a) governance of liquidity risk management, including: risk tolerance; structure and responsibilities for liquidity risk management; internal liquidity reporting; and communication of liquidity risk strategy, policies and practices across business lines and with the board of directors;

---

5 These monitoring tools comprise: (i) Contractual maturity mismatch; (ii) Concentration of funding; (iii) Available unencumbered assets; (iv) LCR by significant currency; and (v) Market-related monitoring tools. See http://www.bis.org/publ/bcbs238.pdf.
(b) funding strategy, including: policies on diversification in the sources and tenor of funding; whether funding strategy is centralised or decentralised; and intraday liquidity needs;

(c) liquidity risk mitigation techniques;

(d) an explanation of how stress testing is used; and

(e) an outline of contingency funding plans.

Explanation of the LCR common disclosure template

Explanation of each row of the common disclosure template

<table>
<thead>
<tr>
<th>Row number</th>
<th>Explanation</th>
<th>Relevant rules text paragraph(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Sum of all eligible high-quality liquid assets, as defined in the rules text, before the application of any limits, excluding assets that do not meet the operational requirements, and including, where applicable, assets qualifying under alternative liquidity approaches</td>
<td>28–68</td>
</tr>
<tr>
<td>2</td>
<td>Retail deposits and deposits from small business customers are the sum of stable deposits, less stable deposits and any other funding sourced from (i) natural persons and/or (ii) small business customers (as defined by paragraph 231 of the Basel II framework)</td>
<td>73–84, 89–92, 110</td>
</tr>
<tr>
<td>3</td>
<td>Stable deposits include deposits placed with a bank by a natural person and unsecured wholesale funding provided by small business customers, defined as “stable” in the rules text</td>
<td>73–78, 89–91</td>
</tr>
<tr>
<td>4</td>
<td>Less stable deposits include deposits placed with a bank by a natural person and unsecured wholesale funding provided by small business customers that are not defined as “stable”</td>
<td>73–74, 79–81, 89–91</td>
</tr>
<tr>
<td>5</td>
<td>Unsecured wholesale funding is defined as those liabilities and general obligations from customers other than natural persons and small business customers and that are not collateralised</td>
<td>93–111</td>
</tr>
<tr>
<td>6</td>
<td>Operational deposits include deposits from bank clients with a substantive dependency on the bank where deposits are required for certain activities (ie clearing, custody or cash management activities). Deposits in institutional networks of cooperative banks include deposits of member institutions with the central institution or specialised central service providers.</td>
<td>93-106</td>
</tr>
<tr>
<td>7</td>
<td>Non-operational deposits are all other unsecured wholesale deposits, both insured and uninsured</td>
<td>107–109</td>
</tr>
<tr>
<td>8</td>
<td>Unsecured debt includes all notes, bonds and other debt securities issued by the bank, regardless of the holder, unless the bond is sold exclusively in the retail market and held in retail accounts</td>
<td>110</td>
</tr>
<tr>
<td>9</td>
<td>Secured wholesale funding is defined as all collateralised liabilities and general obligations</td>
<td>112–115</td>

Annex 2

Instructions for completion of the LCR common disclosure template

- Rows in the template are set and compulsory for all banks. Annex 1 provides a table that sets out an explanation of each line of the common template, with references to the relevant paragraph(s) of the Basel III LCR rules text. Key points to note about the common template are:
  - Each dark gray row introduces a new section of a certain component of the LCR (HQLA, cash outflows, and cash inflows) but does not require any value to be reported.
  - The light grey rows represent the broad categories of the subcomponents of the LCR in the relevant section.
  - The unshaded rows represent subcomponents within the major categories of cash inflows and outflows. The relevant subcomponents to be included in the calculation of each row are specified in Annex 1.
  - Cross-hatch cells indicate that data does not need to be disclosed.

- Figures must be presented as averages of the daily observations of individual line items over the financial reporting period (ie the average of components and the average LCR over the most recent three months of daily positions, irrespective of the financial reporting schedule). The averages are calculated after the application of any haircuts, inflow and outflow rates and caps, where applicable. For example:

\[
\text{Total unweighted HQLA}_{qi} = \frac{1}{T} \times \sum_{t=1}^{T} (\text{Total unweighted HQLA})_t
\]

\[
\text{Total weighted HQLA}_{qi} = \frac{1}{T} \times \sum_{t=1}^{T} (\text{Total weighted HQLA})_t
\]

where \(T\) equals the number of observations in period \(Q_i\).

- Unweighted figures of HQLA (line item 1, column 2) must be calculated at market value. Weighted figures of HQLA (line item 1, column 3) must be calculated after the application of the respective haircuts but before the application of any caps on Level 2B and Level 2 assets. Unweighted inflows and outflows (line items 2–20, column 2) must be calculated as outstanding balances. Weighted inflows and outflows (line items 2–20, column 3) must be calculated after the application of the inflow and outflow rates.

- Adjusted figures of HQLA (line item 21, column 3) must be calculated after the application of both (i) haircuts and (ii) any applicable caps (ie cap on Level 2B and Level 2 assets). Adjusted figures of net cash outflows (line item 22, column 3) must be calculated after the application of both (i) inflow and outflow rates and (ii) any applicable cap (ie cap on inflows).

- The LCR (line item 23) must be calculated as the average of daily observations of the LCR:

\[
\text{LCR}_{Qi} = \frac{1}{T} \times \sum_{t=1}^{T} \text{LCR}_t
\]
Not all reported figures will sum exactly, particularly in the denominator of the LCR. For example, “total net cash outflows” (line item 22) may not be exactly equal to “total cash outflows” minus “total cash inflows” (line item 16 minus line item 20, in the common template) if the cap on inflows is binding. Similarly, the disclosed LCR may not be equal to an LCR computed on the basis on the average values of the set of line items disclosed in the template.
