

## Online Annex to Drehmann and Yetman: "Which credit gap is better at predicting financial crises? A comparison of univariate filters"

### Graphs

Graphs OA1.1-1.4: AUCs for different measures of the linear projection gap based on (separate estimation per economy and GDP normalisation), (panel estimation and per capita normalisation) and (separate estimation per economy and per capita normalisation); related to Section 5 and Graph 1 in the paper.

Graph OA2: Projection GDP gaps for the US for lags 28 and 29 from panel estimation vs (separate) country-specific estimation (illustration of the end point problem discussed in Section 5)

Graphs OA3.1-3.4: Graphs of credit gaps by economy (underlying data used to generate Graph 3)

Graph OA4.1: AUCs for different measures of the credit gap, 1985q1-2000q4 (full version of the upper panel of Graph 4 from the paper)

Graph OA4.2: AUCs for different measures of the credit gap, 2001q1-2017q3 (full version of the lower panel of Graph 4 from the paper)

Graph OA5.1: AUCs for different measures of the credit gap, advanced economies (full version of upper panel of Graph 5 from the paper)

Graph OA5.2: AUCs for different measures of the credit gap, emerging market economies (full version of the lower panel of Graph 5 from the paper)

Graph OA6.1: AUCs for different measures of the credit gap, economies with crises in GFC (full version of upper panel of Graph 6 from the paper)

Graph OA6.2: AUCs for different measures of the credit gap, economies without crises in GFC (full version of lower panel of Graph 6 from the paper)

Graph OA7: AUCs for different measures of the credit gap, Projection GDP gap based on lags 20-23 (full version of Graph 7 from the paper)

Table OA6.2: AUCs for different measures of the credit gap, economies without crises in GFC (corresponds to lower panel of Graph 6 in the paper and Graph OA6.2 in this annex)

Table OA7: AUCs for different measures of the credit gap, with projection gaps are based on lags 20-23 (corresponds to Graph 7 in the paper and Graph OA7 in this annex)

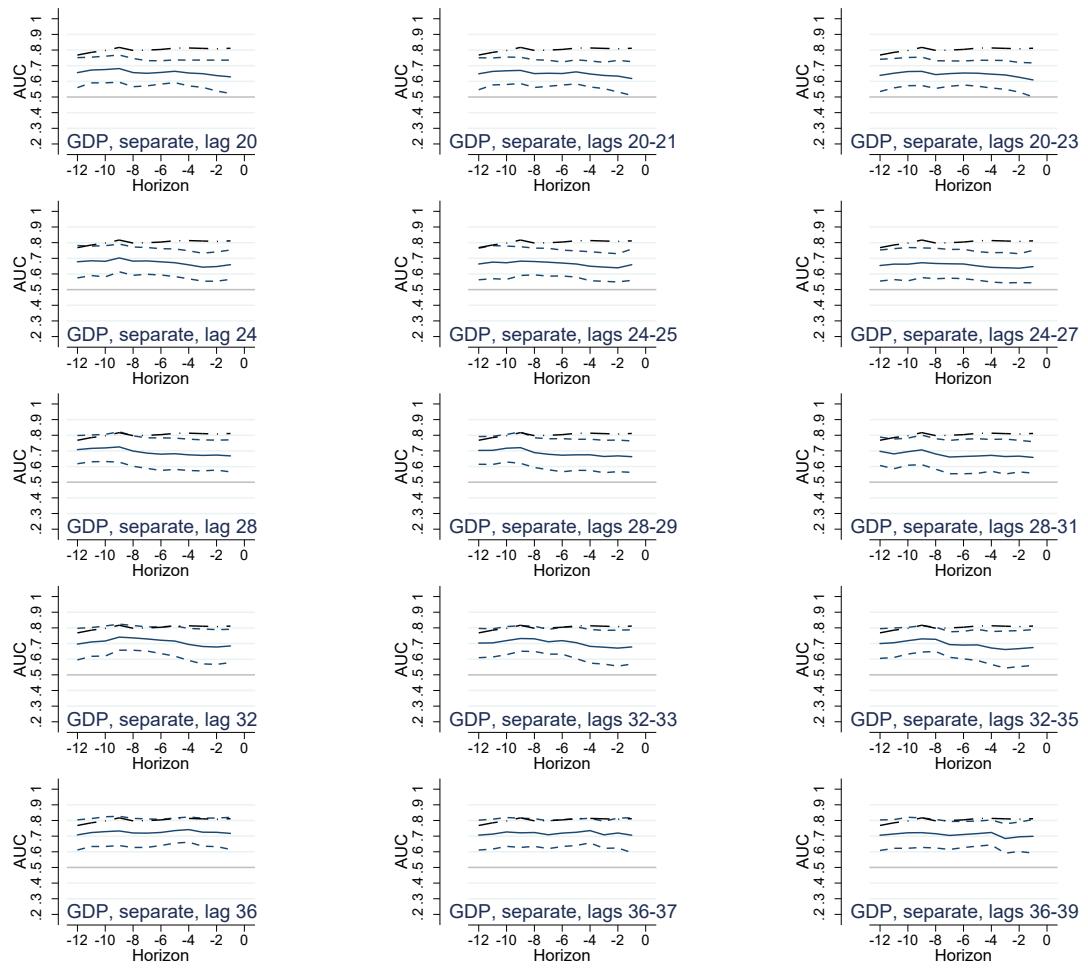

## Annex graphs

Graph OA1.1: AUCs for different measures of the linear projection gap based on separate estimation per economy and GDP normalisation

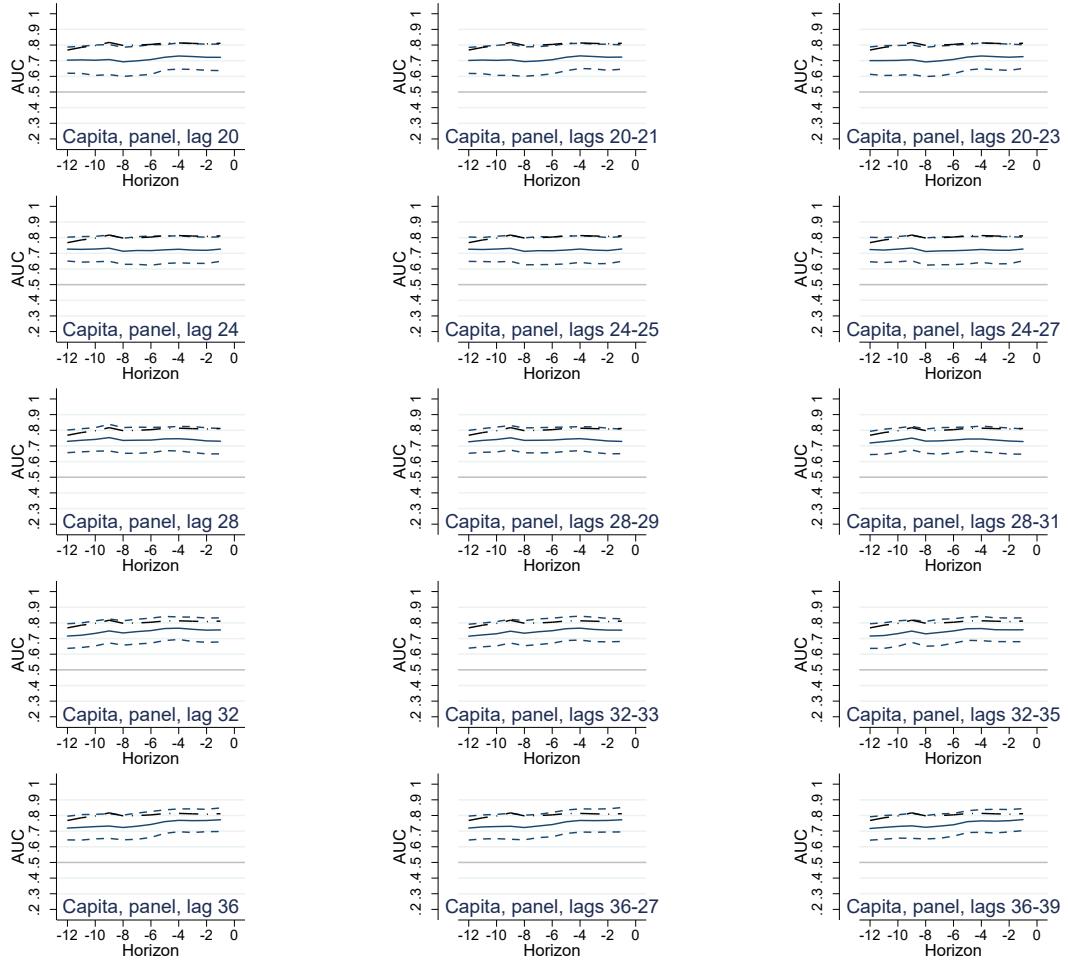

Note: AUCs for different forecast horizons based on separate estimation per economy and GDP normalisation. A dot-dash line indicates the results for panel estimation and GDP normalisation with lags 28-29, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Yellow diamond: highest AUC across the 60 specifications at that given forecast horizon. Green dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA1.2: AUCs for different measures of the linear projection gap based on separate estimation per economy and GDP normalisation

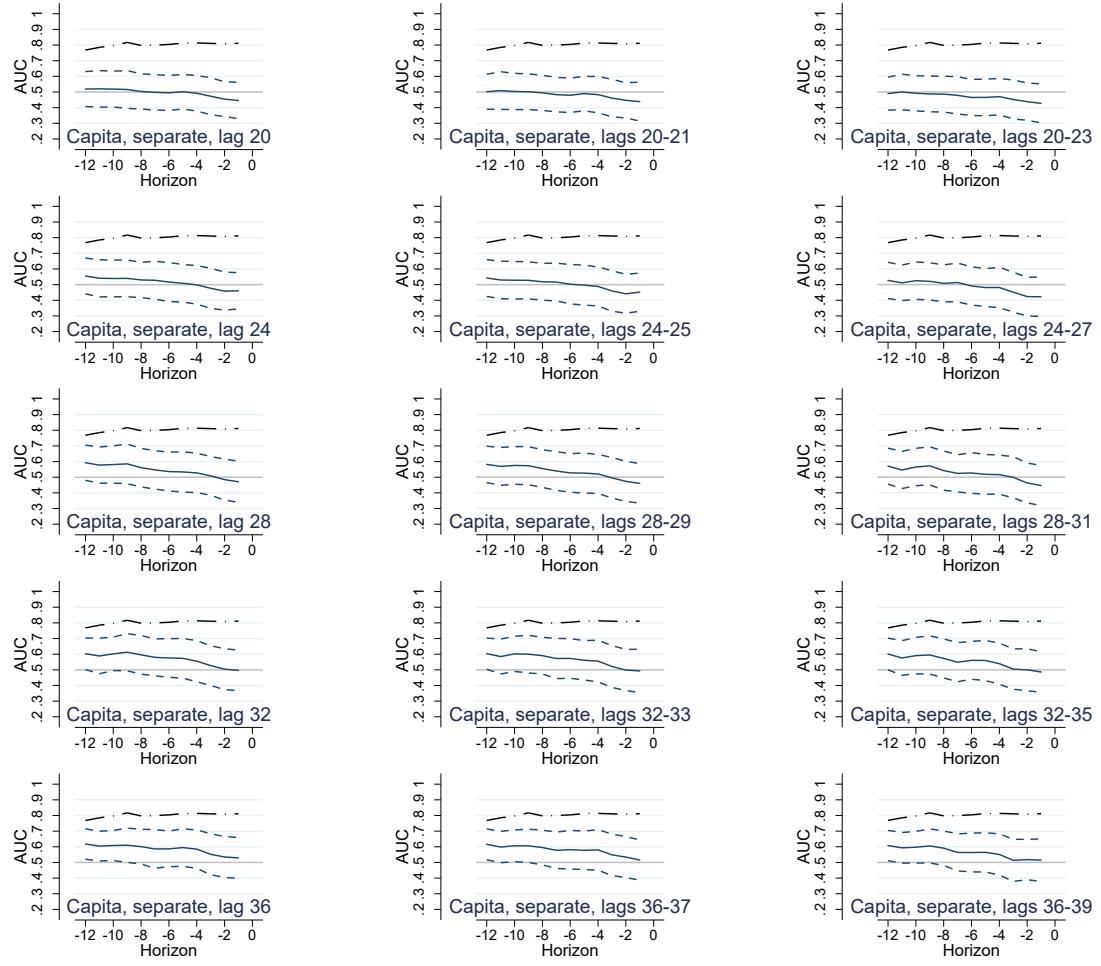

Note: AUCs for different forecast horizons based on separate estimation per economy and GDP normalisation. A dot-dash line indicates the results for panel estimation and GDP normalisation with lags 28-29, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Yellow diamond: highest AUC across the 60 specifications at that given forecast horizon. Green dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA1.3: AUCs for different measures of the linear projection gap based on panel estimation and per capita normalisation

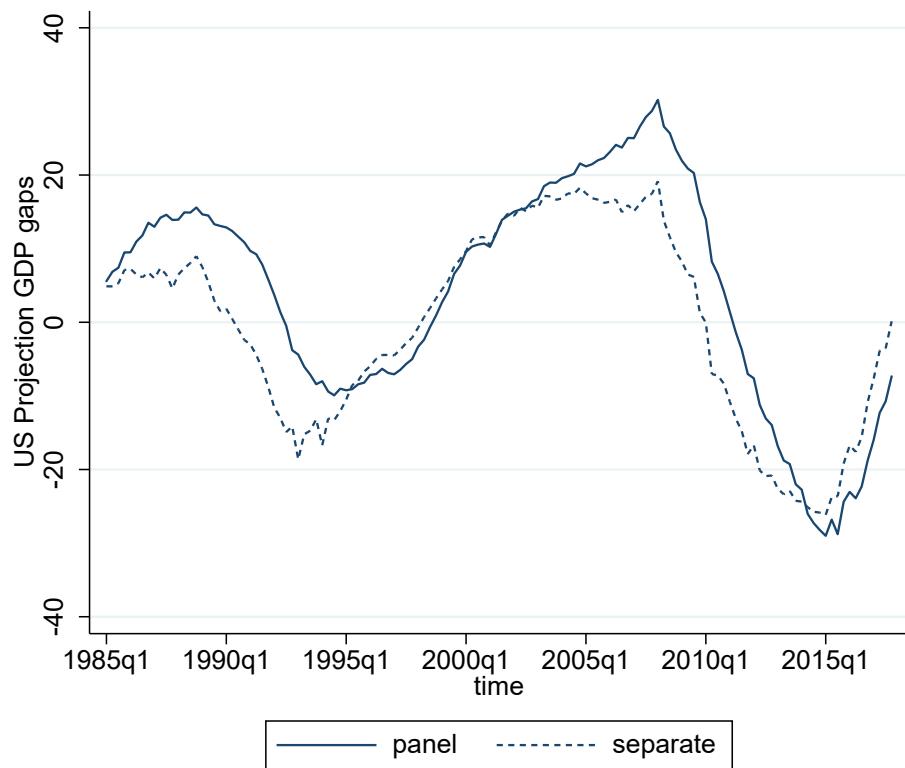

Note: AUCs for different forecast horizons based on panel estimation and per capita normalisation. A dot-dash line indicates the results for panel estimation and GDP normalisation with lags 28-29, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Yellow diamond: highest AUC across the 60 specifications at that given forecast horizon. Green dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA1.4: AUCs for different measures of the linear projection gap based on separate estimation per economy and per capita normalisation

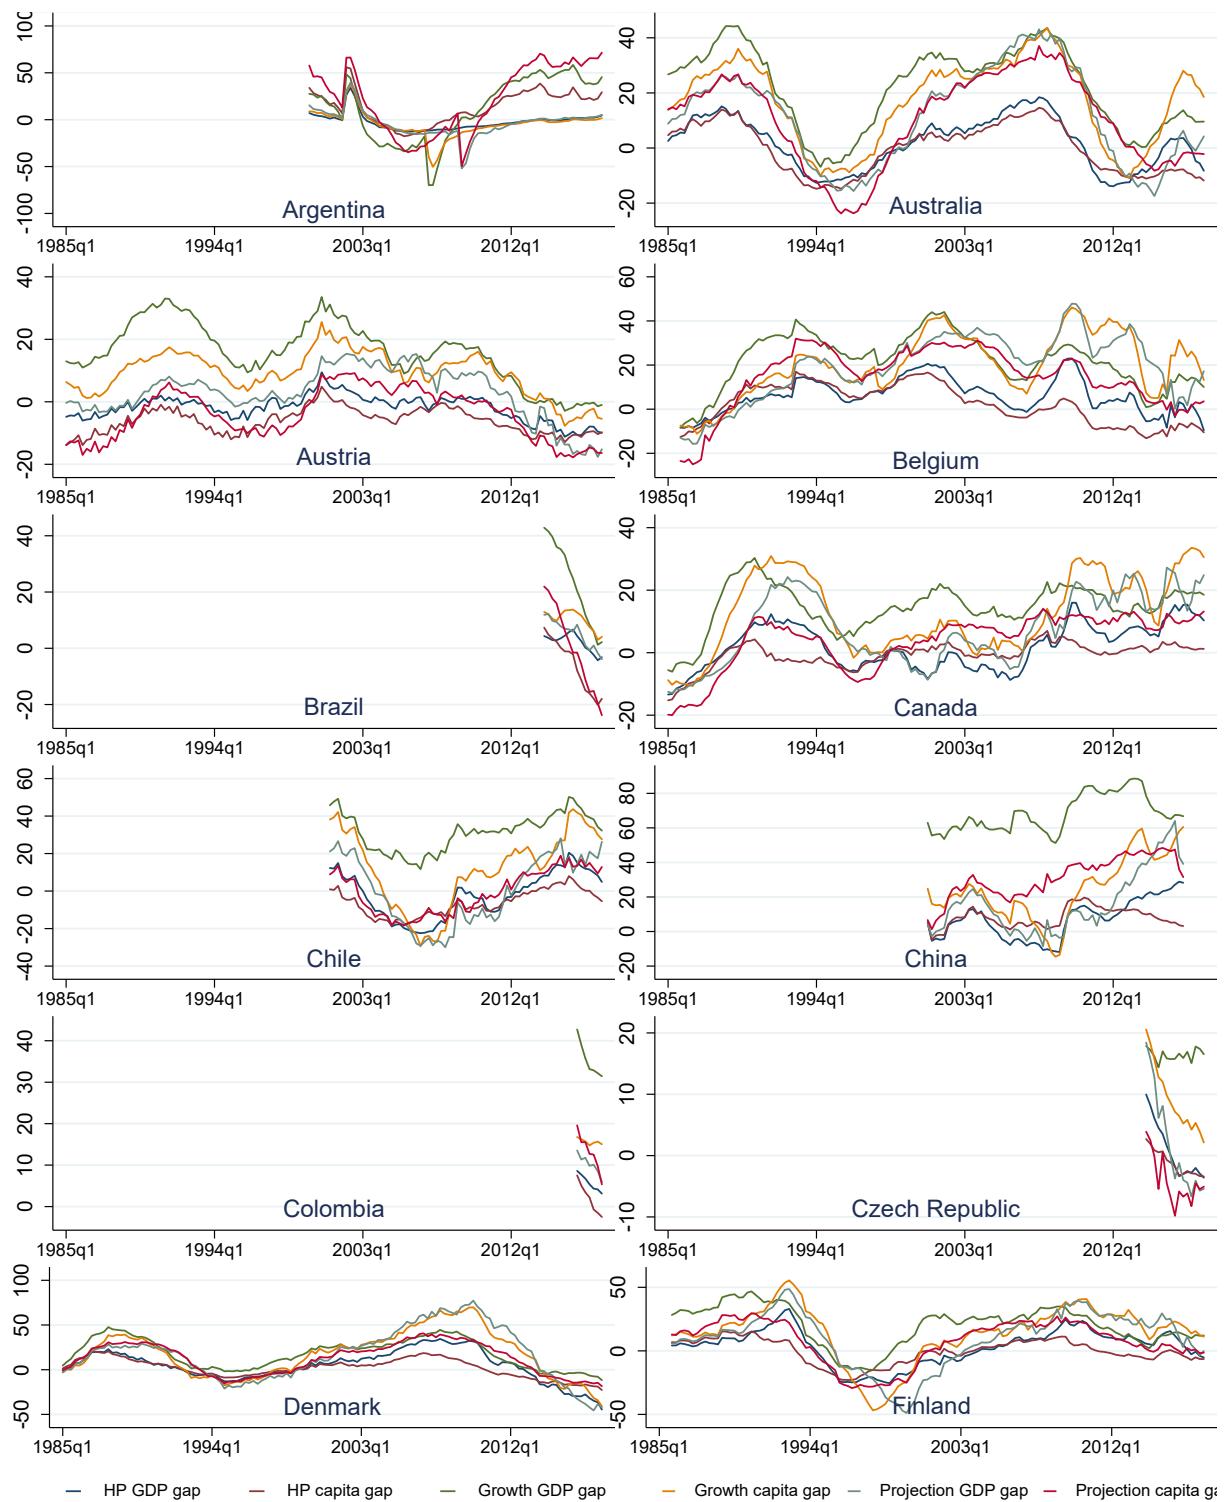

Note: AUCs for different forecast horizons based on separate estimation per economy and per capita normalisation. A dot-dash line indicates the results for panel estimation and GDP normalisation with lags 28-29, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Yellow diamond: highest AUC across the 60 specifications at that given forecast horizon. Green dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA3.1: Graphs of credit gaps by economy

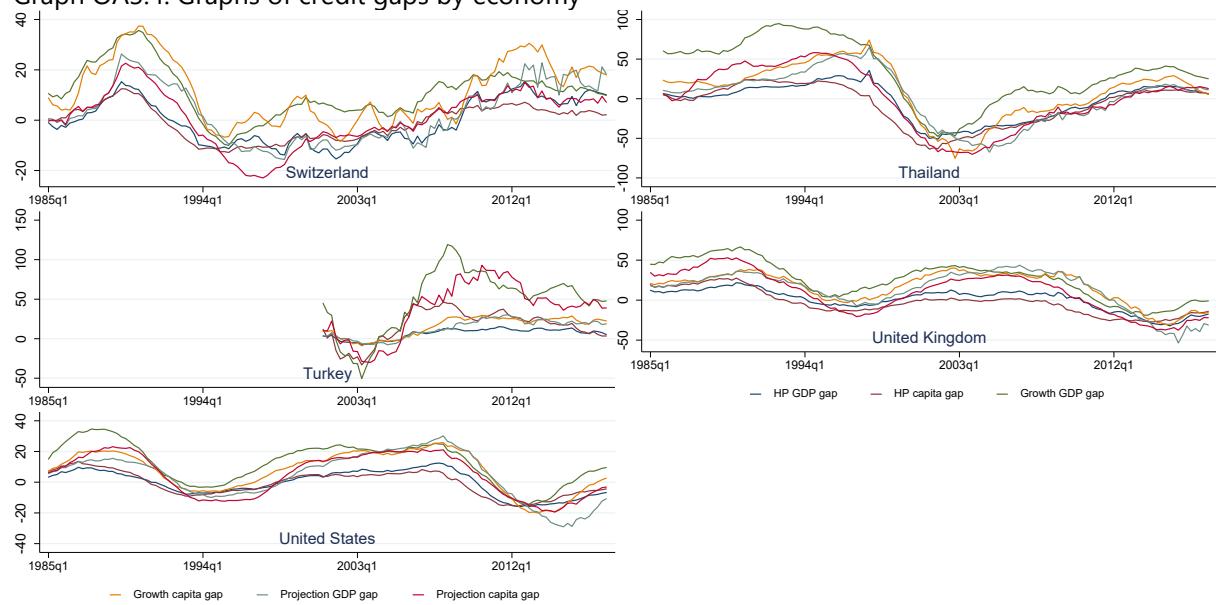

Graph OA3.2: Graphs of credit gaps by economy

Graph OA3.3: Graphs of credit gaps by economy

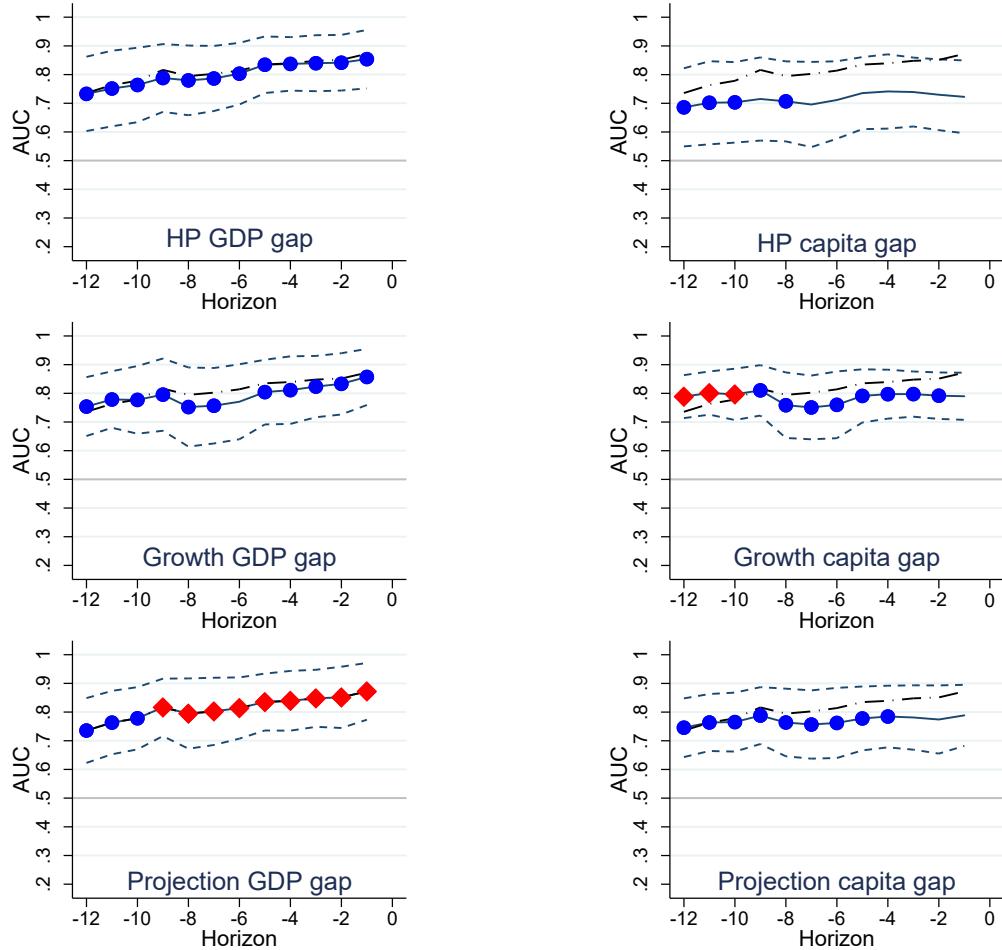

Graph OA3.4: Graphs of credit gaps by economy

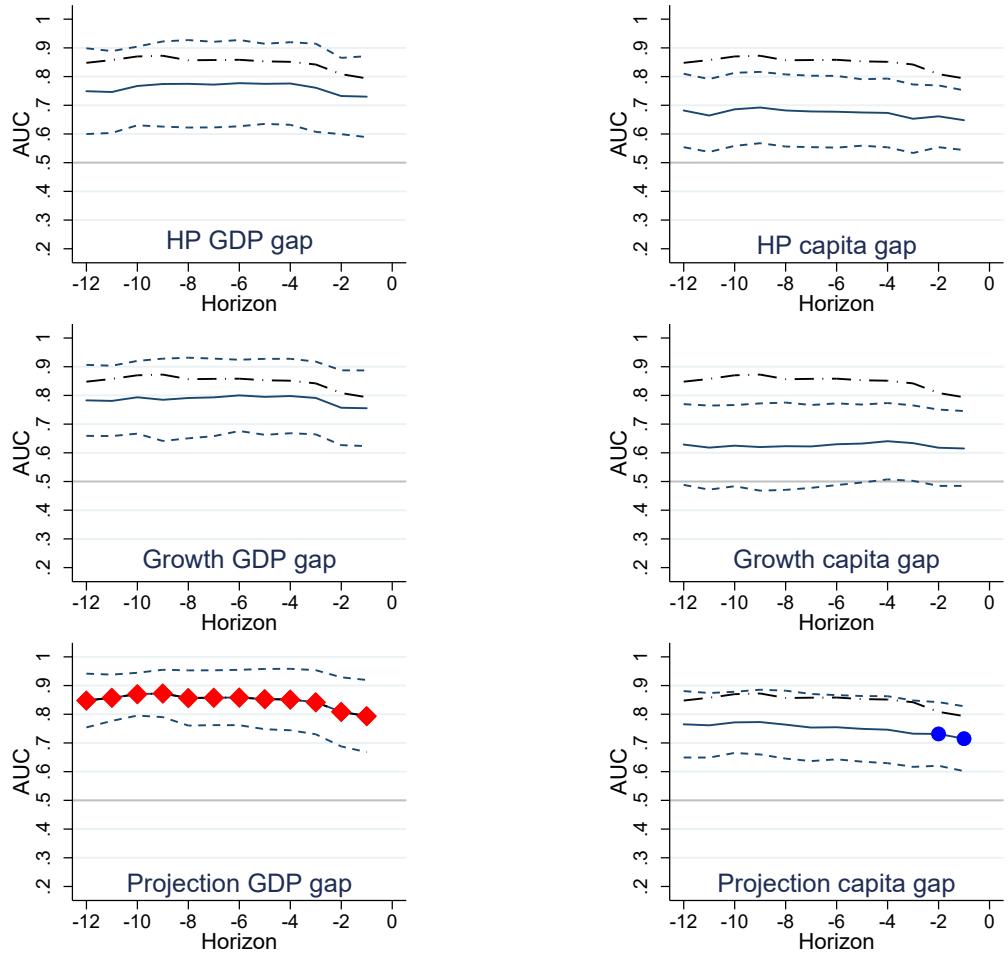

Note: Gaps are only used once there are 15 years of credit-to-GDP ratios to reliably estimate the trend. Hence, samples are very short for some EMEs.

Graph OA4.1: AUCs for different measures of the credit gap, 1985q1-2000q4 (full version of upper panel of Graph 4 from the paper)

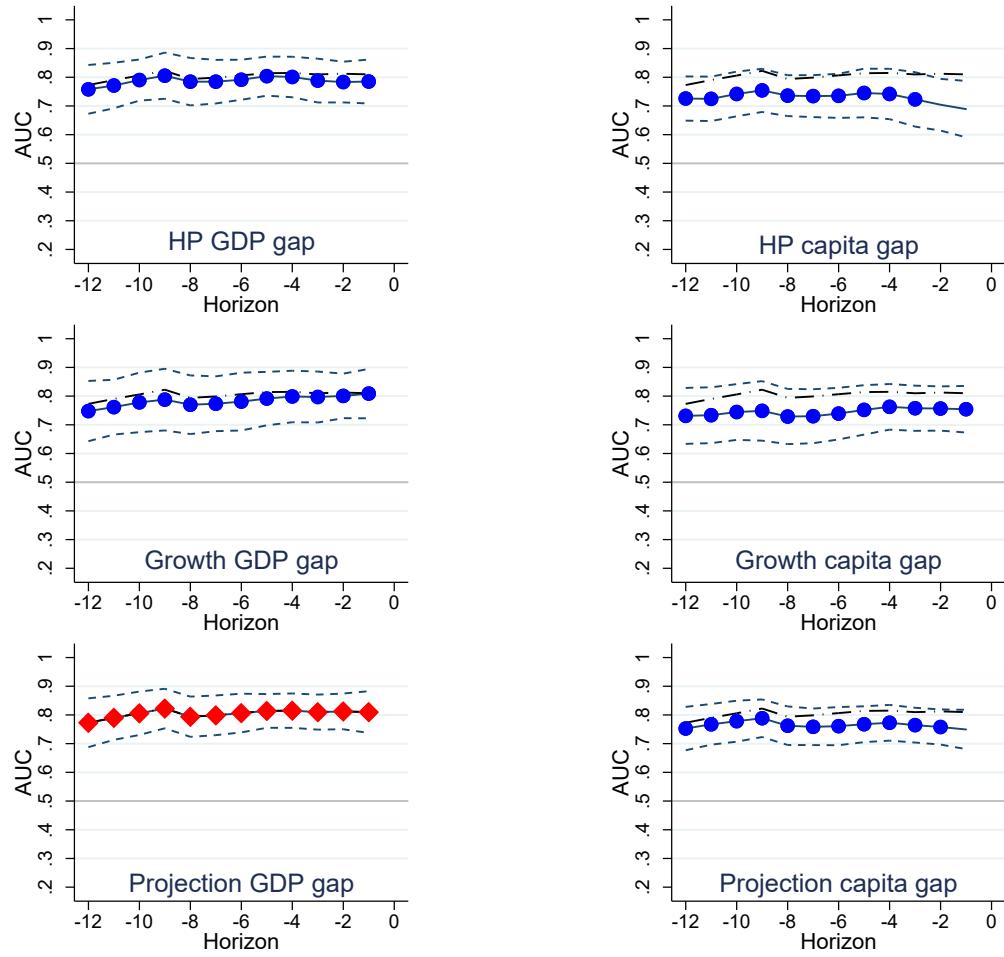

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon. Blue dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA4.2: AUCs for different measures of the credit gap, 2001q1-2017q3 (full version of lower panel of Graph 4 from the paper)

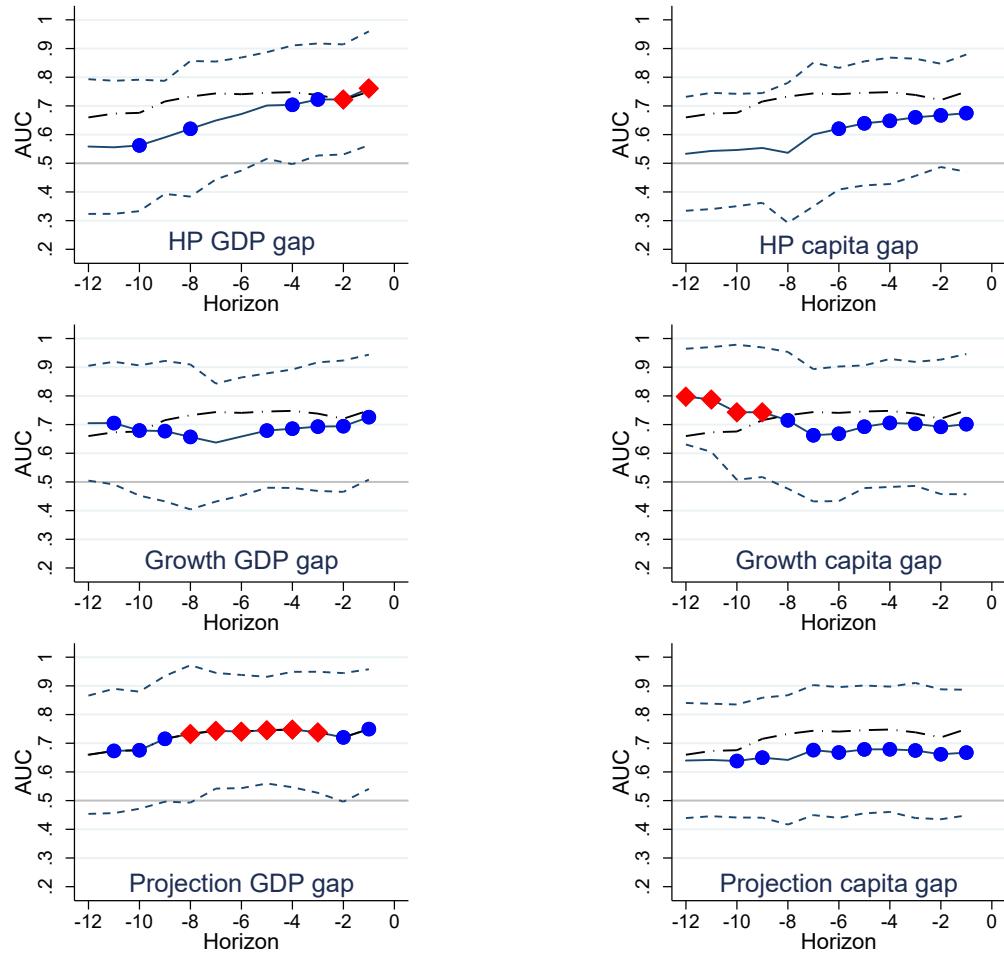

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon. Blue dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA5.1: AUCs for different measures of the credit gap, advanced economies (full version of the upper panel of Graph 5 from the paper)

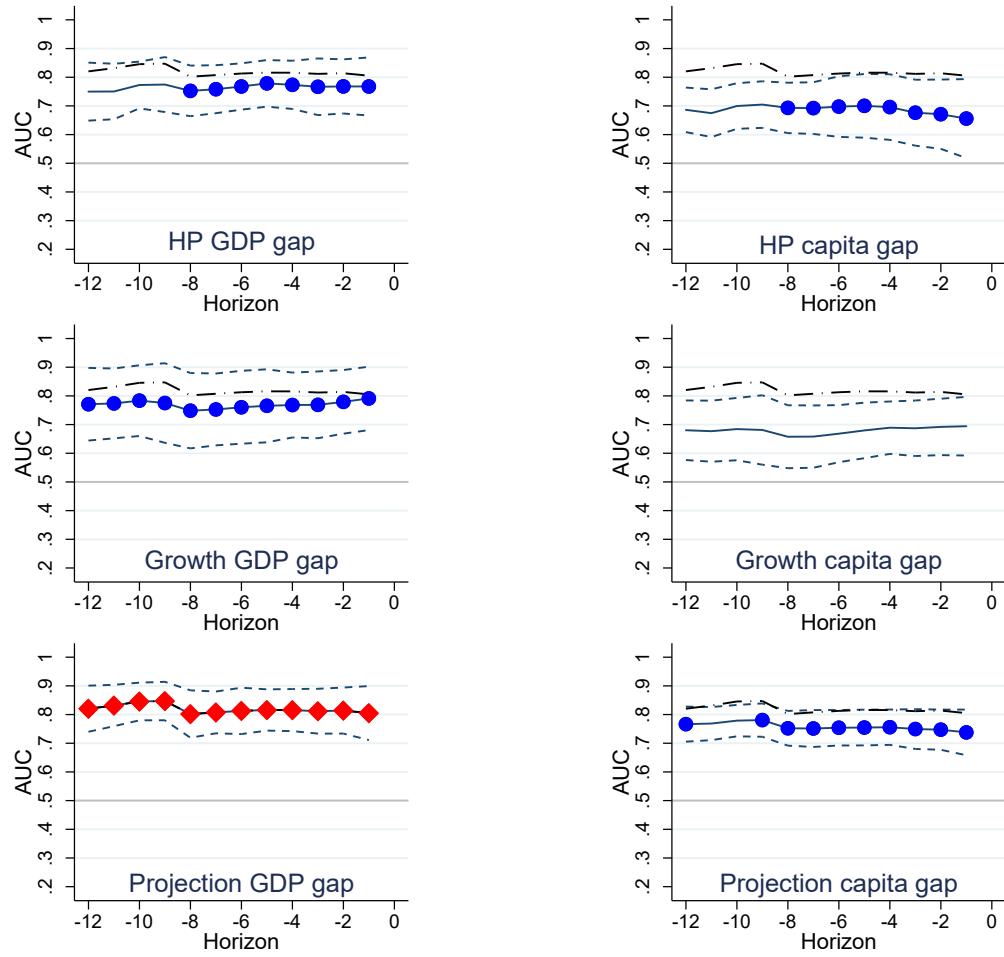

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon. Blue dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA5.2: AUCs for different measures of the credit gap, emerging economies (full version of the lower panel of Graph 5 from the paper)

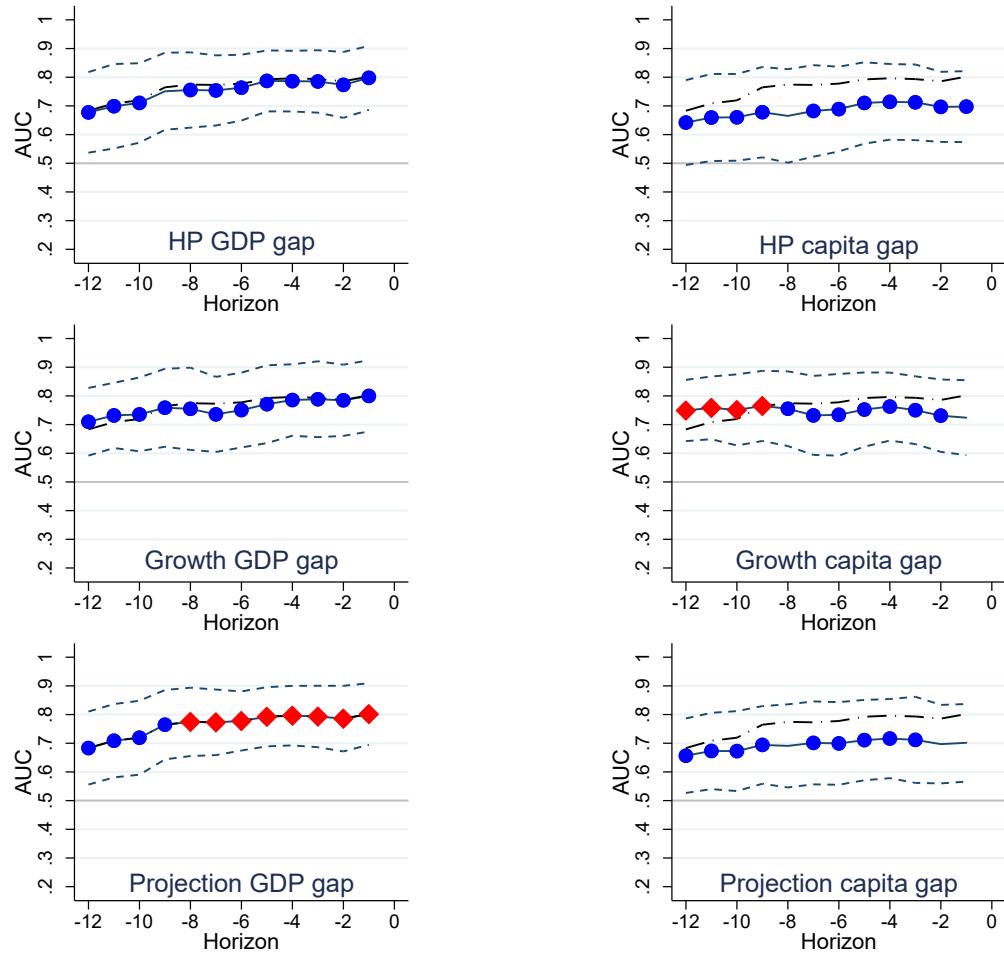

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon. Blue dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA6.1: AUCs for different measures of the credit gap, economies with crises in GFC (full version of the upper panel of Graph 6 from the paper)

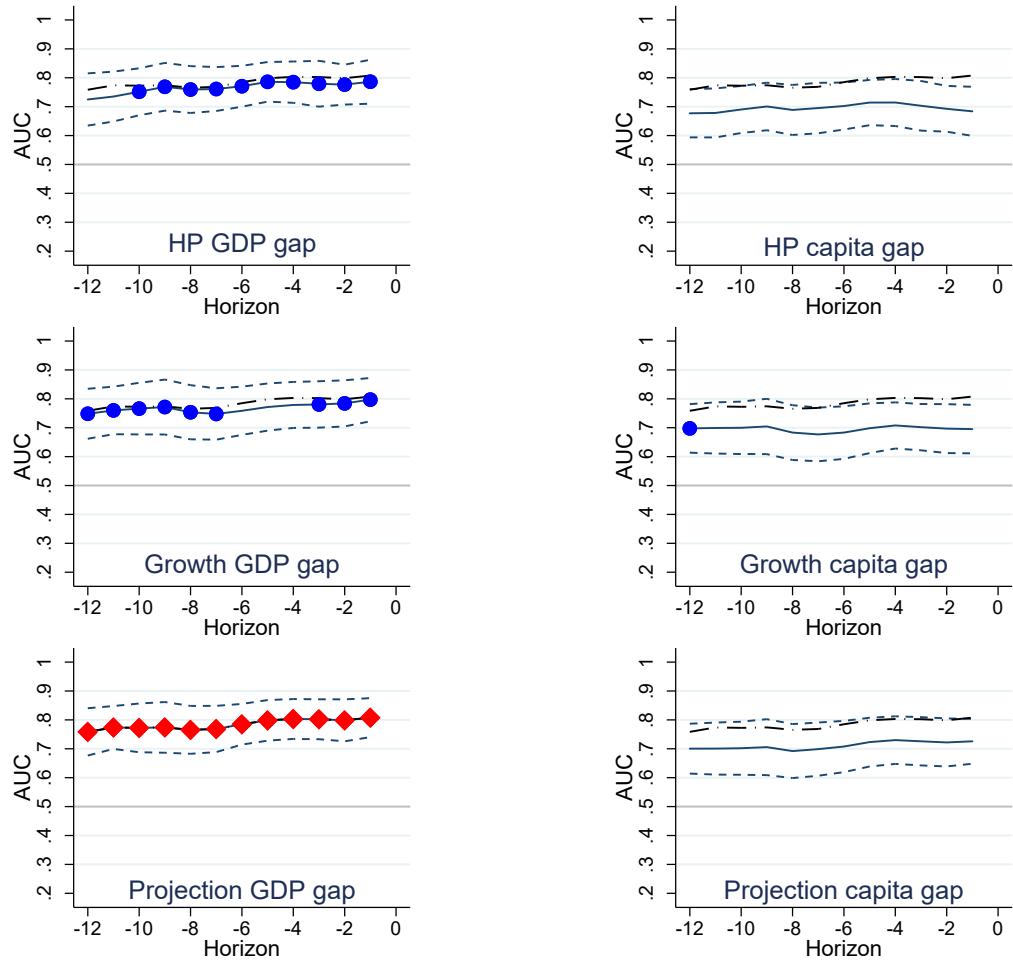

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon. Blue dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA6.2: AUCs for different measures of the credit gap, economies without crises in GFC (full version of the lower panel of Graph 6 from the paper)

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon. Blue dot: AUC is not statistically different from the highest AUC at this horizon at 95% confidence level, based on bootstrapped critical values using 1000 replications.

Graph OA7: AUCs for different measures of the credit gap, Projection GDP gap based on lags 20-23  
 (full version of Graph 7 from the paper)

Note: AUCs for different forecast horizons. A dot-dash line indicates the results for the projection GDP graph, for ease of comparison. Horizon: quarters before crises. Solid line: point estimates; dashed lines: 95% confidence intervals. Red diamond: highest AUC across the six specifications at that given forecast horizon.
