

Global coverage of BIS locational banking statistics

The BIS locational banking statistics (LBS) are reported by banking offices located in selected countries, including many offshore financial centres, and exclude the assets and liabilities of banking offices outside of these countries. As shown in the graph below, the number of LBS-reporting countries increased from 15 in 1977 to 47 in 2016.

The graph also shows LBS-reporting banks' cross-border claims as a share of the estimated cross-border claims of all banks worldwide. This share increased from 51% in 1977 to 93% in 2016. The cross-border claims of banks located outside of LBS-reporting countries are estimated as the liabilities reported by LBS-reporting banks to banking offices in non-reporting countries, scaled up to adjust for claims on non-banks and claims on non-reporting countries. The scaling factors are based on the composition of LBS-reporting banks' portfolios.

Global coverage of the locational banking statistics
